Gorbachev struggles to hold the union together

By Quentin Peel in Moscow

PRESIDENT Mikhail Gorbachev yesterday ignored the evidence that his own Communist party is beginning to follow the disintegration process of the Soviet Union, and launched a passionate defence of the unified national state.

Speaking only days after the Georgian party followed the lead of Lithuania in declaring its independence from the Soviet Communist Party, Mr Gorbachev denounced "arbitrary, extremist nationalism" as the most serious danger now facing the country.

He appealed to a plenary meeting of the ruling party's central committee - once the most powerful body in the country, but now increasingly marginalised by the widening political debate - to back his efforts to persuade all 15 Soviet republics to remain within a single federal state.

"The task the party is facing today is to do everything in its power to assist in the creation of a mighty political sentiment in favour of preserving and renewing the union," he said.

The crucial two-day meeting, being held one week before the congress of people's deputies meets to consider Mr Gorbachev's draft of a new union treaty, is the reason why the Soviet leader cancelled his attendance at today's presentation ceremony of his Nobel peace prize in Oslo.

"The Communist party remains today the only political force on an all-union scale," he said, in spite of last week's defection by the Georgian party, which now openly sup-

ports that republic's campaign for outright independence. Also at the weekend, the independent Lithuanian party, which broke away at the start of the year, renamed itself the Democratic Labour party.

Mr Gorbachev said the Communist party "stands for preservation and radical renewal of the union. It is not a tactical move, not a concession to anybody undertaken under pressure of circumstances. It is a position of principle."

He admitted that the republics were striving to break away from the "oppressive guardianship" of Moscow's old-style rule. However, he also expressed his conviction that every Soviet republic ("I mean its people, not the ambitious public figures straining after portulacos") must recognise the advantages of remaining within the union.

"There is no more serious danger in the country today than arbitrary, extremist nationalism," he said. The key question to be resolved was power-sharing between the central government and the republics. "But this process now is out of control. It has the character of open confrontation."

Mr Gorbachev's furious battle to preserve the union appears to be forcing him increasingly to fall back on the three pillars of Soviet society still committed to a unitary state: the Communist party, the military and the KGB. Yet even those institutions are not united in themselves.

He repeated his insistence that no republic should be allowed to leave the union without a referendum, although the Baltic republics reject that. They insist that they were never legally incorporated into the union, having been invaded by the Red Army in 1940, and therefore do not need legally to leave it.

He repeated his insistence that no republic should be allowed to leave the union without a referendum, although the Baltic republics reject that. They insist that they were never legally incorporated into the union, having been invaded by the Red Army in 1940, and therefore do not need legally to leave it.

ANGRY Soviet citizens gathered outside the Norwegian embassy in Moscow to protest against the award in Oslo yesterday of the Nobel peace prize to President Mikhail Gorbachev.

The protesters carried a cartoon (see above) showing the president arriving in Norway in a nuclear submarine to pick up his prize. However Mr Gorbachev did not attend the ceremony in person, citing the Soviet Union's many domestic problems. Mr Anatoly Kovalyov, first deputy foreign minister, accepted the award and delivered a speech on his behalf.

In it Mr Gorbachev denounced hard-line opposition to perestroika and praised the international community for showing solidarity with the Soviet Union at a difficult time.

He said 1990 represented a turning point by marking the end of the unnatural division of Europe. He warned, however, of "some very grave threats that have not yet been eliminated: potential for conflict and the primitive instincts which allow it, aggressive intentions, and totalitarian traditions."

Brussels' Ecu3bn aid proposal criticised

By David Buchan in Brussels

THE European Commission yesterday proposed aid worth more than Ecu3bn (\$2.1bn) for the Soviet Union and eastern Europe next year but several EC member states criticised key aspects of the plan.

Mr Jacques Delors, the Commission president, said he would "think over again" the precise proposals he would put to the European Community summit in Rome on Friday, after finance ministers had taken their first close look at his plans to give Moscow Ecu750m worth of credit and grants for emergency food aid.

He suggested the Community might soon have to revise its long-term financial guidelines to meet the unforeseen external demands being put on it.

Chiefly at issue was the Commission suggestion to give the Soviet Union Ecu500m worth of credit to buy food out of EC stocks, in addition to Ecu250m worth of food as a straight grant.

Germany, Britain and the Netherlands argued that it was better not to write into the EC budget Soviet credits which Mr Norman Lamont, the UK chancellor of the exchequer, said "might have to be written off".

France also expressed reservations about extending EC credit operations into the new area of food financing.

Germany and several other countries seemed to have no quarrel with the level of proposed food aid, only with the method of its financing.

But Mr Lamont, with some Dutch backing, hoped that aid to the east could be contained within the Community's 1991 budget guideline, in which only Ecu500m remain uncommitted.

Mr Delors, however, highlighted the dilemma for the Community in increasing the grant element in its Soviet aid package.

"We don't want to give the impression that we are neglecting famine in other parts of the world, nor do we want to upset the world market," he said.

Traditional Soviet food suppliers, ranging from North America and Hungary, to Australia and New Zealand, are worried about the effect on their exports if the EC dumps free food on the Soviet market.

Referring to "the already worsening Soviet distribution problem," Mr Delors said the EC was "answerable to all Europeans" in ensuring any EC food reached the genuinely needy in the Soviet Union.

The Commission estimates the six countries of eastern Europe are still some Ecu3bn short of what they will need next year to absorb the additional shock of having to pay the higher world prices for Soviet oil in hard currency.

But ministers yesterday agreed the EC should share with its 12 partners in the Group of 24 western aid donors the task of filling east Europe's 1991 financing gap.

Walesa hands reins of Solidarity to trusted aide

By Christopher Bobinski in Warsaw

POLAND'S designate president, Mr Lech Walesa, basking in the triumph of his victory, yesterday handed over the running of the Solidarity trade union to a trusted aide.

His defeated opponent, Mr Stanislaw Tyminski, was meanwhile prevented by the public prosecutor's office from leaving the country so that he could be questioned on "demonstrating a state organ". The offence carries a maximum prison sentence of eight years.

During an election rally on November 17, Mr Tyminski accused Mr Walesa of "betraying Poland's interests by undervaluing state sector companies now being privatised. He later modified his statement to accuse Mr Mazowiecki of "ignoring" the national interest.

Unofficial results indicate that Mr Walesa received 74.25 per cent, or 11m votes, and Mr Tyminski, the Polish-Canadian businessman, 25 per cent, or 3.5m votes. However, Mr Walesa failed to receive the hoped-for, with the turnout a low 53.4 per cent.

The battle for control of the Solidarity union, which catapulted Mr Walesa into the limelight more than 10 years ago, will be decided at a special congress. But Mr Walesa yesterday acted quickly in nominating Mr Bogdan Borusewicz as his temporary successor.

Also moved from Gdansk to Sopot, a resort on the Baltic coast, until his inauguration. Today, he will visit Czestochowa, Poland's revered Catholic shrine and is expected to announce his candidate for prime minister later this week.

Despite suggestions that he might choose Mr Leszek Balcerowicz, the finance minister who has been responsible for

an austerity programme approved by the International Monetary Fund, Mr Walesa may be tempted to leave him in his present post. Instead, he might hand overall responsibility for the economy to someone from among the groups which supported him in the election campaign.

These include Mr Walesa's close aides in Gdansk, the Gdansk-based free market Liberal Democratic group, the conservative Centre Agreement Solidarity faction, and the Solidarity "network", a factory-based organisation which favours employee share ownership schemes.

It remains unclear what sort of role Mr Walesa wants to play as president. He has remained reticent on this issue saying only that he is weighing up "five variants and another three solutions".

However, he has shown little sign that he intends to relinquish the political initiative he now has. There is speculation that he may try to concentrate power in the presidency and thus drive the government and parliament.

Mr Walesa is acutely aware of the social costs of the current austerity policies. The first casualty was Mr Mazowiecki, who won a mere 18 per cent of the vote in the first round of elections. The result was a warning that the government must be brought into the government - even if the same tough policies are to be conducted.

Mr Walesa's powers will also depend on the new constitution on which the Sejm, or parliament, is still working. So far the tendency has been to reduce the president's powers. It may be brought into the government - even if the same tough policies are to be conducted.

Opel to build assembly plant in E Germany

By Andrew Fisher in Frankfurt

ADAM OPEL, the German subsidiary of General Motors of the US, will announce on Thursday its decision to build a 1.2m (\$200m) assembly plant in east Germany.

The deal will bring the level of planned German automotive investment in east Germany up to about DM7bn. Volkswagen is investing about DM5bn, mostly in a new assembly plant for its Golf family cars while Mercedes-Benz will spend some DM1bn on a truck facility.

The Opel plant, to be built at Eisenach, near the former border between the two Germanys, will have an annual capacity of about 150,000 small Corsa and Kadett cars a year and employ more than 2,000 people.

A fiber optic cable may open the door to interference-free, high speed communications. The metal-coated optical fiber was created by Hughes Aircraft Company from long glass strands covered with an aluminum coating. These optical fibers withstand temperatures up to 400 degrees centigrade, can be soldered to eliminate the need for organic materials that could cause contamination, and exhibit long life and high reliability characteristics. Besides being used for point-to-point data communication, the technology can also be incorporated in fiber optic sensors and optoelectronic hybrid circuits for use in space satellites, advanced fighter aircraft instrumentation, and automobile, aircraft and spacecraft engine monitoring.

Inexpensive aluminum clips help trim nearly £100,000 from the cost of a satellite. The clips were designed and used by Hughes to hold major structural elements of the new HS 601 communications satellites together. Previously the satellites were bonded together, a time-consuming process because of the close tolerances involved and the approximately one week required for each bond to cure. With about 250 structural joints per satellite, the clips save nearly £100,000 in hands-on labor per spacecraft. Another benefit of the technique is the elimination of bond testing. Verifying the torque, a much faster process, is all that's required with the new process.

An improved flow of information between air defense command and control centers and surface-to-air missile systems will be one result of a new state-of-the-art communications link being designed by Hughes. The link, called the Intelligent Interface Processor, will provide the signal interface between AN/TSQ-73 surface-to-air missile control systems and fixed NATO Air Defense Ground Environment sites in the Federal Republic of Germany, Italy, Belgium, and the Netherlands. With the new system, NATO commanders will be able to allocate targets to be engaged by missile batteries and still retain autonomy. Commanders will also be able to exchange target and status information currently available only through voice communications.

The innovative deployment of a new sonar system provides an improved means of detecting, identifying, and tracking of ocean targets. The Surveillance Towed Array Sonar Segment (SURTASS), developed by Hughes for the U.S. Navy, allows antisubmarine warfare commanders to have capabilities never before possible for the collecting and processing of undersea acoustic data. The system consists of a long line of sonar arrays towed behind a noncombatant craft. Target data is transmitted through a satellite link to land-based centers where operators can review the data on a detailed display.

Gunnery in U.S. Army M1 Abrams tanks are able to see and pinpoint targets day or night using laser rangefinder and thermal imaging systems produced by Hughes. These systems are also being applied to advanced fire control and air defense systems employed by other Free World Countries. Deliveries of the systems have passed the 8,000 mark, and over the 10-year life of the program, unit prices have decreased nearly 50 percent as the result of significant increases in production efficiency.

Small parties key to Danish poll

Hilary Barnes examines the issues in tomorrow's general election

THE Danish Social Democratic Party, which dominated Danish politics for most of the 50 years until it lost office in 1982, is surging ahead in the opinion polls and stands to have one of its best elections for a long time, but even so the ambition of its leader, Mr Svend Auken, 47, to become prime minister seems likely to be thwarted.

He has two chances. The first is that two of the small, non-Communist parties which are standing in the election are likely to vote with the Social Democrats, but if it happens Mr Auken, a former minister of labour, might be able to form a minority government with left-wing support alone - a "red cabinet" in the terminology of the non-socialist parties.

His best chance is that Ms Mini Jakobsen, who leads the small Centre Democratic Party (and is the only woman party leader in Denmark), would like to see a majority coalition of the Social Democrats and Prime Minister Poul Schlüter's Conservatives, arguing that the country needs a strong, stable majority government to tackle the challenges of the 1990s.

As the Centre Democrats may well hold the swing vote in a hung parliament after the election, the party may be able to force the SPD and the Conservatives to consider her proposal in the post-election manoeuvring.

Mr Schlüter, prime minister since 1982 and at present head

Prime Minister Poul Schlüter voting in the last election

of a minority coalition of his own Conservatives plus the Liberal Party and the Radical Liberals, says he thinks the idea unworkable. But he is

nevertheless prepared to sound out the possibility for a majority coalition, to include the Socialists, Conservatives and Liberals.

Support for the Social Democrats is up from 29.8 per cent in the 1988 election to 33-35 per cent in the opinion polls, but this seems to be less a reaction to eight years under Mr Schlüter than falling support for the left-wing Socialist People's Party, down from 15 to 10 per cent in the same polls.

In policy terms, the political scene is relatively calm. After dramatic battles over foreign policy issues in the 1980s the Social Democrats and the non-socialist parties are in broad agreement on both Nato and EC. There is also agreement that Denmark must stick to its ERM membership.

But there are important differences between the SPD and non-socialist parties. The SPD are more inclined to support generous public spending policies than the government. It also claims to be keener on environmental policies and has fewer inhibitions against taxing capital gains from property and shares.

Denmark under Mr Schlüter has been less prodigal than previously. Inflation is under 3 per cent, the trade surplus is at around 100 billion kroner this year - relatively one of the largest in Europe, and this year for the first time since 1983 there will be a current account surplus.

Unemployment, though, is running at 9.8 per cent, but neither side is offering a quick

fix for this problem. Mr Schlüter called the election, 18 months before it is due, when negotiations between his government and the Social Democrats over tax and labour reforms broke down.

Tax reform ought therefore to be the main policy issue in the election. As Mr Klemmensen says, "there are major differences of principle between us and the Social Democrats."

But in the course of the negotiations between the coalition and the Social Democrats the differences over the main issue, the government's desire to reduce the top rate of income tax from 68 per cent to 62 per cent, was narrowed to whether it should become 64 or 66 per cent. Hence, most voters wonder what all the fuss is about.

Meanwhile, the election could hang on whether the two extreme left-wing parties scrape home. The Unity Party, which represents the Communists and two other small parties, is the least likely to get in, but the second - Common Cause - could just make it.

Its leader is Mr Preben Møller Hansen, chairman of the Seamen's Union. Also standing for the party is Mr Mogens Glistrup, farmer and former chairman of the tax-protest Progress Party. He was kicked out of his own party last month and has done a deal with Mr Møller Hansen as his only possibility of getting back into the Folketing. The polls suggest they both will.

Budapest near accord with IMF

By Nicholas Denton in Budapest

INTERNATIONAL Monetary Fund and Hungarian officials said yesterday they were on the brink of agreement on a three-year programme to help the country through the painful restructuring of its economy.

Gerard Belanger, assistant director of the IMF's east European division, said they hoped to make an announcement in a couple of days.

The Hungarian government's planned budget deficit of 7500 forints (\$1.57bn) and current account deficit of \$1.2bn were acceptable to the IMF, said Mr Frigyes Haraszty, deputy president of the central bank.

The signs of success have surprised many people, including some within the government, who felt the sketchiness of its three-year economic programme would make an agreement with the IMF far more than a year impossible.

Attention now turns to parliament, since the signing of a letter of intent with the IMF depends on parliamentary acceptance of the government's 1991 budget draft.

The likelihood of agreement with the IMF staves off the possibility of Hungary rescheduling its \$21bn foreign debt. Mr Haraszty said last week that agreements with the IMF and the World Bank could release \$600m-\$800m of credits next year.

WEU to play more important role in European defence

By Ian Davidson in Paris

THE NINE nations in the Western European Union defence grouping decided yesterday that the organisation must play an important part in the future security structure of Europe.

Foreign and defence ministers of the member states agreed that the WEU - Britain, France, Germany, Italy, Spain, Portugal and Benelux - has a key role to play both in the construction of Europe and in the modernisation of Nato.

They also agreed that the WEU should make an "appropriate contribution" to the increasingly important European security problems lying outside the European area.

Mr Roland Dumas, France's foreign minister, said after words that some delegations had put more emphasis on the Atlantic alliance, while others had stressed the construction of Europe. But he said these were differences of weighting, not contradictions.

Yesterday's communiqué marks a new step in the emergence of a growing European consensus in favour of a stronger defence dimension and a stronger role for the WEU. This is in part a direct consequence of the Gulf crisis, in which the organisation has found an important role in co-ordinating the European contribution to the naval embargo.

Since all nine governments are also members of the European Community, yesterday's agreement guarantees that a reinforced role for the WEU will be high on the agenda of the inter-governmental conference on European political union, which is to be launched at the EC summit in Rome at the end of this week.

Moreover, it appears to confirm that the British government has already moved towards a more European-centred defence posture. The communiqué follows the joint letter circulated last Friday by France and Germany urging that the future political union should work with the WEU on a common European security policy, and eventually on a common defence policy.

Yesterday's statement represented an important upgrading of the role now being assigned by western European governments to an organisation which has languished for most of its 36-year existence. It said the construction of Europe should include a defence dimension, in which the WEU could play an important role in liaison with the evolution of political union. The WEU would be essential in modernising the political and military structures of Nato, in developing a larger role for Europe, and in strengthening transatlantic solidarity.

More detailed proposals on the role of WEU in the future security architecture of Europe will be submitted to the next regular ministerial meeting early in 1991. Meanwhile national chiefs of staff will meet early next year to make a military appraisal of the challenge to European security, and to study co-operation between member states.

SPD selects Engholm as chairman

By John Wyles in Rome

GERMANY'S opposition Social Democratic Party last night chose Mr Björn Engholm, the 51-year-old prime minister of the northern state of Schleswig-Holstein, as its new chairman to repair the damage caused by the SPD's heavy defeat in this month's general election, writes Andrew Fisher in Frankfurt.

This followed the refusal of Mr Oskar Lafontaine to accept the post after his heavy defeat at the polls. The SPD was left in a dilemma, since Mr Hans-Jochen Vogel, the present party chairman, had signalled his intention of standing down in May. Mr Engholm had already said he would take the SPD chairmanship if it was offered to him, though making clear it was not a position he was actively seeking.

Mr Engholm, a former education minister, will have a hard task to overcome the confusion in the SPD ranks after the election rout.

Italian unions to strike for cut in working hours

By John Wyles in Rome

ITALIAN union leaders have called a four-hour general strike for December 16 in all sectors of the economy, except the health and transport services, to try to win a cut in working hours in the engineering industry.

The clash highlights the gulf between employers and unions over how to respond to rising labour costs and declining trade competitiveness. Engineering employers claim they can expect little relief from lira devaluations following the currency's move last January from its 6 per cent margin of fluctuation in the EMS exchange rate mechanism to the 2.25 per cent band.

Engineering employers are likely to come under growing political pressure to concede the modest 16 hours a year cut in working time over four years which Mr Carlo Donat Cattin, the labour minister, has recommended. His mediation

proposal also included L250,000 (£115) a month pay rises over three years and a lump sum payment of L240,000. Employers have accepted the pay proposals.

For their part, the employers may be trying to involve ministers in an exercise to bring forward negotiations with the government and unions on pay bargaining rules which are due to start next June.

For the moment, the unions are refusing to take part because of the engineering dispute. Confindustria, the industrialists' organisation, is concerned that they could be long delayed if, as seems likely, an election is called next summer.

Merloni, Italy's largest national domestic appliances manufacturer, yesterday broke ranks by announcing that it was going to pay its 2,000 employees a 10m lump sum because of the delay in making a new national agreement.

Milosevic set to take power after Serbian election

By Laura Silber in Belgrade

SERBIA'S ruling Socialist party (SPS), led by Mr Slobodan Milosevic, looked set on being swept into power following the first multi-party elections to be held in Yugoslavia's biggest republic for over 50 years.

The Socialist party, which under its former guise as the Communist party which ruled both Serbia and Yugoslavia since the Second World War, is expected to win both the presidential and parliamentary elections.

According to early returns from the first round of the elections which were held on Sun-

day, the SPS won nearly 80 out of 260 seats in Serbia's parliament.

Initial results for the post of president of Serbia, also showed that Mr Slobodan Milosevic, the current president, was leading by a substantial margin. Mr Vuk Draskovic, head of nationalist Movement for Serbian Renewal, and his strongest challenger.

Mr Milosevic seems certain to gain the 50 per cent needed to prevent a second round of voting.

Mr Milosevic's victory casts doubt over the possibility of future negotiations with the

western republics of Croatia and Slovenia over what kind of political structure under which the newly elected governments of the republics should live.

Support for Mr Draskovic and his nationalist right-wing party, which has grown over the past month, may have collapsed because of widespread fears of a military coup.

The Yugoslav Army unambiguously stated that the armed forces support a federal and socialist Yugoslavia.

The SPS, which tightly controls Serbia's media, have claimed themselves to be the only party which can guaran-

tee Serbia's 6.8 million voters a "secure future". Opposition candidates throughout the election campaign have protested the ruling party's monopoly on the media.

The SPS has postponed a series of proposed reforms which are needed to overhaul the republic's economy. Workers in the biggest factories have recently received pay rises, which is in contradiction to the reform program of Mr Ante Markovic, the Yugoslav prime minister.

Ruling Communists were also set for a landslide victory in elections held on Sunday in

Montenegro, the smallest republic according to early returns. Montenegro's communist party, under Mr Momir Bulatovic, backs Serbia's leadership.

The final election results, which are expected on Tuesday evening, are likely to harden the resolve of the western republics to gain greater independence from the Yugoslav federation.

Slovenia, has called a referendum on independence for December 23, the same day of the second round of Serbian elections.

MILlicom - THE CELLULAR INDUSTRY'S FIRST!

Another major achievement at the end of an exceptionally successful year. Millicom Cellular has become the first Company to be awarded BS 5750 Parts 2 & 3 for cellular service provision. This coincides with the Company also being awarded the Land Mobile Radio Quality Assurance Standard (LMRQAS) and further demonstrates Millicom's total commitment to quality and customer service.

Millicom was part of the development and operational success of what is now the world's largest and most profitable cellular network. Our objective throughout has been to improve cellular communications and make it more responsive to customer needs. With Service Provision now our core business, some of this year's significant achievements include the opening by the Prime Minister of our new £5m Headquarters in Darlington, County Durham, the installation of an advanced and innovative billing and administration system and the launch of our exclusive customer magazine.

To find out more about how Millicom can assist with your company's communications telephone 071 757 5000.

THANKS...

To all the Companies who help us to communicate.

Algeria emerges as new mediator

By Tony Walker in Cairo

ALGERIA has emerged as a possible key to the peaceful resolution of the Gulf crisis by offering itself as a mediator in complex inter-Arab discussions aimed at achieving a settlement. Mr Chadli Benjedid, Algeria's president, is expected to visit Jordan, Iraq and Saudi Arabia this week in an effort to help fashion a diplomatic solution.

The emergence of Algeria as a neutral player in the crisis has been long expected, and corresponds with a role the Algerians have played many

times in the past as conciliators in inter-Arab disputes. Mr Benjedid said in an interview with the Algerian news agency, APS, that the situation in the Gulf was "very complex and dangerous, but we are not discouraged that reason and dialogue will prevail".

Significantly, the Algerian leader has met a personal envoy of King Fahd of Saudi Arabia twice in the past week. He has also received Kuwaiti and Iraqi officials on a number of occasions since the Gulf crisis erupted on August 2. News

that Mr Benjedid will embark on a mediating mission in the Gulf this week coincides with reports of behind-the-scenes discussions on a possible compromise that would enable Iraq to retain part of the disputed Rumaila oilfield on its border with Kuwait and Warba and Bubiyan, two islands which would provide Iraq with easy access to the Gulf.

These reports have been vigorously denied by Saudi, Kuwaiti and Iraqi representatives.

In Baghdad, Mr Latif Jassem,

Iraq's information minister, yesterday sought to emphasise to western countries that the release of their nationals held hostage implied no weakening of its resolve to retain Kuwait.

He said: "Kuwait is Iraqi - past, present and future - and not an inch of it will be given up." "If the United States chooses the path of confrontation to solve problems," he added in a typically belligerent manner, "Iraq together with Arabs and Moslems, can inflict a grand defeat on it and its allies."

Hostages 'one less worry' for Bush

By Peter Riddell, US Editor, in Washington

ALTHOUGH the release of American and other foreign hostages by Iraq has been widely welcomed, President George Bush has ensured that their fate does not determine his Gulf policy, a view shared in Congress even by his critics.

Mr Dick Cheney, the defence secretary, said yesterday that while the hostages' release was "obviously very good news" for those involved, it did not mean that Iraq was backing away from its armed occupation of Kuwait and should not raise hopes for a peaceful solution.

Mr Bush has even gone as far as to say that the release of the hostages simplifies any

military decisions. "When every single American is out of Kuwait, we will clear the decks," he said. "I think you can make the case that this facilitates the tough decisions that might lie ahead. When you don't have Americans there, and if force is required, that's just one less worry I've got."

Over the past few days, senior administration officials have been at pains to deny that any deal is in the works. Mr Robert Gates, the deputy national security adviser, stressed that there were "absolutely no negotiations".

He underlined what he called "the administration's

primary concern" that an impression might be given of linkage between the Gulf crisis and the Arab-Israeli conflict, which is why the US has been seeking to remove or tone down any UN reference to a Middle East peace conference.

Mr James Baker, secretary of state, has recently been stressing the related themes of maintaining the credibility of the war option, ensuring that aggression is not seen to be rewarded and signalling the possibility of talks between Iraq and Kuwait over disputed territories after a withdrawal.

He has promised that the US and others in the multinational

force would stay "to make certain there is order and security during the time it might take for any discussions to be completed" and would permit "Kuwait to negotiate on a much more balanced basis".

The Bush administration has been concerned about other moves which might undermine the military option, such as a possible partial withdrawal from Kuwait which was denied by Iraq yesterday.

Such an action might increase existing doubts in the US Congress and among the American public about the wisdom of early action rather than persevering with sanctions.

Israeli tourist earnings plunge

By Hugh Carnegie in Jerusalem

THE NUMBER of visitors to Israel in November was less than half that in the same period last year as the Gulf crisis continued to wreak havoc with the important tourism industry.

One effect has been a serious loss of revenue at El Al, the state-owned airline, which says passenger traffic is down by about 50 per cent on this time last year. The company is predicting little better than break-even this year after \$24.2m profits in 1989 and the government has been forced to put on hold plans to float 51 per cent of the airline on local and foreign stock exchanges.

Tourist arrivals last month totalled 34,700, down from 66,000 the previous November. This followed a 31 per cent year-on-year drop in September and a 35 per cent fall in October. Tourism last year earned \$1.8bn in foreign exchange, compared to industrial exports of \$7bn.

Kuwait claims \$64bn for Iraqi damage and debt

By Tony Walker, recently in Tall

KUWAIT says it is owed \$64bn (\$33.2bn) by Iraq for stolen property, unpaid debts and damage caused by the August 2 invasion.

According to Dr Abdul Rahman al-Awadi, Kuwait's minister of cabinet affairs, studies by the exiled Kuwaiti government show there were grounds for massive war reparation claims that far exceeded previous figures mentioned.

Interviewed at the exiled government headquarters in Tall, near Jeddah, Dr Awadi said that Kuwaiti officials had been making inventories of looted items that included Kuwait's entire 18-month stockpile of food and medicines, and also of the damage to property inflicted by the invasion forces.

The Kuwaiti officials said that the value of stolen spare parts and supplies of special additives for Kuwait's refineries amounted to \$500m alone. Dr Awadi, a medical practi-

tioner and a former health minister, said that equipment removed from Kuwait's 12 hospitals would cost some \$2bn to replace.

He said that Iraq also owed Kuwait \$14bn in debts left over from the Gulf war. Efforts would be made to secure repayment if and when the crisis ended.

Dr Awadi said the exiled government had also formed committees to prepare the restoration of essential services on returning to Kuwait, such as water, electricity and communications.

"Our main concern," he said, "is to bring Kuwait back to normal life. For that we have a three-month emergency plan, a six-month plan and an annual rolling plan".

He estimated that there were about 300,000 Kuwaitis out of a total population of 760,000 still left in the country. An equal number of Palestinians were also there.

Japan urged to 'share the risks'

By Stefan Wagstyl in Tokyo

JAPAN was urged yesterday to send men as well as money to the Middle East to show its willingness to share the risks of the Gulf crisis.

Mr Michael Armacost, the US ambassador in Tokyo, said in a speech that the US still regarded "a Japanese physical presence in the Gulf as an important demonstration of its willingness to share the risks of responding to Saddam's aggression".

Mr Armacost's words carefully, Mr Armacost said he did not mean to express any discontent about Japan's contribution to the US-led forces in the Gulf. It was for Japan to decide what further contribution it would make, said Mr Armacost, speaking on the opening day of a new session of the Diet (parliament), which has the Gulf crisis high on its agenda.

He pointed out: "Impressions forged in a major international crisis like this one tend to have a durable effect."

Mr Harvey May, who worked for the United Bank of Kuwait before the Iraqi invasion, hugs his wife, Barbara, and 12-year-old son, David, at London's Heathrow airport early yesterday.

Western European Union keeps up the pressure on Saddam

Allies boost Gulf co-operation

By Ian Davidson in Paris

EUROPEAN foreign and defence ministers are to hold an extraordinary meeting to review the Gulf crisis on January 17, two days after the expiry of the United Nations deadline for Iraq to withdraw from Kuwait.

The decision was announced yesterday by Mr Roland Dumas, French foreign minister, after a meeting of the nine-member Western European Union (WEU) which reaffirmed European insistence that Iraq must unconditionally withdraw from Kuwait.

Mr Dumas told the meeting that Iraq had a "last chance of a peaceful solution". He insisted on the "total determination" of the international community to enforce respect for the law, "if need be through the use of force". Since the

start of the Gulf crisis, WEU countries have been co-operating closely in the enforcement of the naval embargo against Iraq.

Yesterday ministers decided to strengthen their co-operation, either in the naval embargo, or in the air and ground forces deployed by some of them in the Gulf.

Mr Douglas Hurd, British foreign secretary, said afterwards: "There is no weakness here. All the member states are clear that Saddam Hussein must comply with all UN Security Council resolutions."

He said that President Saddam's decision to release the foreign hostages was welcome, but that it did not alter the other UN requirements.

Mr Tom King, British defence secretary, said that he

had asked for extra logistical, transport or medical help from those WEU countries which do not have ground forces in the Gulf, to strengthen the capability of Britain's 35,000-strong force.

He pointed out that there was a chemical weapon detection team from Czechoslovakia, which was not even a member of Nato. He spoke of "a disproportionate between the European efforts and the American effort in the Gulf". Saddam Hussein would be "mad" if he did not take seriously the threat of the use of force.

France has agreed to reinforce its troops in the Gulf and will announce the details shortly, according to Mr Jean-Pierre Chevènement, defence minister.

WEU's role, Page 3

Aquino's deputy sacked over oil prices

By Greg Hutchinson in Manila

PRESIDENT Corason Aquino, in the first phase of a promised cabinet reshuffle, yesterday replaced Mr Catalino Macaraig, his deputy in the cabinet who was also the government's energy co-ordinator.

This came as the Philippines retreated on increases in the retail cost of petrol, running counter to world trends and International Monetary Fund advice to set realistic domestic oil prices.

The government's Energy Regulatory Board, which last week had announced a two-stage increase in petrol prices totalling more than 150 per cent, yesterday cut the cost by more than a quarter to leave premium petrol at peace 15.95 (25p) a litre. Mr Macaraig's role in setting oil price policy in the past week hastened his demise. Many in and out of government have believed his performance as executive secretary, the title given to the president's cabinet deputy, had been lacklustre.

His replacement is Mr Oscar Orbes, 40, the transport and communications secretary, who Mrs Aquino is believed to be grooming as her favoured successor within 18 months when elections are scheduled. Further cabinet changes are expected within two weeks.

The latest oil price rises led to strikes in Manila and Cebu, the country's second city. Several thousand workers took to the streets in protest, but industry and public transport was little affected. Schools were closed.

Office workers in Makati, the country's main financial district, staged an anti-government protest parade featuring calls for Mrs Aquino's resignation. At a Manila shopping centre, meanwhile, gunmen fired on workers at a labour convention, killing two union leaders and wounding another. Against this backdrop of discontent, rumours again swept the capital of a possible coup attempt.

There have been seven military rebellions in Mrs Aquino's 4½ years in power.

● The central bank said yesterday that foreign investment dropped 71.9 per cent to \$79m (\$41m) during the third quarter, down from \$282m a year ago, AP-DJ adds.

IDA plan for Sri Lanka

By Mervyn De Silva in Colombo

THE INTERNATIONAL Development Agency, the World Bank affiliate, is to assist a Sri Lankan power company for the full or partial privatisation of several commercial enterprises by providing a \$120m (\$62.5m) loan.

The programme includes state corporations that manufacture consumer goods for the local or overseas market, such as textiles, shoes and leather goods, and produce increased production after planned reforms is likely to bring additional revenues of \$100m, according to an Industry Ministry official.

He said that so far 14 enterprises have been identified for privatisation or "commercialisation". In each case a percentage of the shares would be offered to employees, but there would also be a voluntary redundancy package.

The official argued that under the previous socialist administration, companies were set up to provide employment, while the sole consideration now was to convert these into profitable ventures.

US, Pakistan to debate aid halt

By Farhan Bokhari in Islamabad

DR HENRY BOWEN, the US assistant secretary of defence for international security, is due to arrive in Islamabad on Thursday for talks which diplomats expect to cover Washington's recent suspension of \$66m (\$33.7m) in aid.

The halt in assistance followed an increasing lack of conviction in the US administration and Congress that Pakistan's nuclear programme was intended entirely for peaceful purposes.

The visit takes place at a time when Pakistani leaders are increasingly taking a nationalistic line, arguing that they will not compromise national interests in seeking foreign assistance. Western diplomats say that positions on both sides have apparently hardened since the aid suspension on October 1.

Pakistani politicians and public representatives have regarded the suspension as an attempt to single out Pakistan, claiming that Israel, India and South Africa have been freer to pursue their nuclear programmes.

Discussions on Hong Kong

By Angus Foster in Hong Kong

BRITISH and Chinese diplomats today begin four days of detailed talks on issues covering Hong Kong's return to Chinese sovereignty in 1997. The Sino-British Joint Liaison Group, overseeing the transfer, is expected to discuss Hong Kong's recently drafted Bill of Rights and the future use of defence land in the colony. Despite improving relations between China and the UK, both of these issues are likely to remain subjects of disagreement between the two sides.

But the group may make progress on proposals to establish a new court of final appeal in Hong Kong, to replace the Privy Council in the UK, before 1997.

Legal experts from the two sides met last week and passed on recommendations to the group. Diplomats in Hong Kong said one important barrier remains to be cleared, although they would not discuss the nature of the hold-up.

Famine affects 10m in Africa

By Michael Holman, Africa Editor

DROUGHT and civil war in Ethiopia and Sudan have left as many as 10m people in urgent need of food, two aid agencies reported yesterday.

About 2.5m people in the Ethiopian province of Eritrea "are at increasing risk of death from hunger and thirst", according to the British aid organisation, Oxfam, while around half of the 4.5m population of the neighbouring province of Tigray will need varying amounts of food assistance until the next harvest in November.

The crisis in Sudan was highlighted yesterday by the UN's Food and Agriculture Organisation (FAO), which appealed for up to 1.3m tonnes of food aid for the country in 1991. "A major and immediate relief effort is required to avert large-scale food shortages and human suffering in the coming months," an FAO statement said. This latest report confirms an October FAO estimate that at least 5m people risked death through starvation.

Stock exchange privatisation heads Jakarta's list of reforms

By Paul Taylor, Asia Business Correspondent

INDONESIA'S government-run Jakarta Stock Exchange will be privatised at the start of next year as part of a radical reform package announced last week by the Finance Ministry.

The package, designed primarily to improve efficiency, boost competition and broaden share ownership, also includes measures to restrict bank securities activities, allow brokers to set up investment funds and tighten market supervision.

For the first time insider trading will be illegal, with unspecified criminal sanctions for those trading on

privileged information. The ministry said capital requirements for underwriters and stockbrokers will be significantly higher on the new exchange, with foreign joint venture firms having to put up more capital than local brokers.

Paid-up capital requirements for stockbrokers, previously Rp25m (\$6,790) for all groups, will be increased 20-fold to Rp500m for local brokers and Rp1bn for joint-venture brokers. Joint-venture underwriters will have to put up Rp1bn, double the previous figure, and local underwriters Rp50m instead of Rp10m. The

initial reaction to the package was positive, with brokers saying that bureaucracy should be reduced, allowing rapid computerisation of haphazard trading systems, one of the main weaknesses of Jakarta.

However, brokers also said there is a danger that the new rules will put several of the smaller local firms out of business.

Prices in Jakarta moved higher on the proposals after languishing in the doldrums for months in the wake of the Middle East crisis which saw the index fall by more than 80 per cent. The big boost to market sentiment

was the new rule that throws open the door to investment funds for private fund managers.

Until now, only unit trusts managed by BPPB, the state-owned underwriter, have been available to the Indonesian public. Beginning next year private firms can set up funds with a fixed capital structure, listing their shares on the floor of the bourse.

Under the Finance Ministry package, banks and other financial institutions will no longer be allowed to trade on the exchange and will have to set up stockbroking subsidiaries

within a year. At the same time Bapepam, the government capital markets agency, criticised in the past for neglecting control in favour of promotion, will confine itself to supervision, the ministry said. "The policy is needed to abolish the double role of Bapepam at once as management and referee," a statement said.

In future Bapepam will issue licences to underwriters, brokerage houses and investment advisers, while permits for stock markets, clearing houses and investment funds will be issued by the Finance Ministry itself.

Jubilation in Bangladesh gives way to uncertainty

Student extremism or military intervention could crush a fragile democracy, reports David Housego

BANGLADESH seems these days like a country waking up to the uncertainties of the morning after. In the aftermath of the euphoria and the tumultuous street demonstrations that last week swept President Hossain Mohammad Ershad from power have come the worries about the fragility of an embryonic democracy vulnerable to both student extremism and military intervention.

"After 15 years [of almost uninterrupted military rule] our country has a chance to bring back democracy," says Sheikh Hasina, the leader of the Awami League, one of the main opposition alliances. "So we should act very cautiously."

Dhaka, the capital, and the other big cities experienced eight days of mass student-led demonstrations followed by two days of jubilation - an event that largely went unreported abroad because foreign journalists were banned from the area.

Bangladeshis believe the "mass upsurge" was almost unprecedented in their brief history - and a part of global trends that have dislodged autocratic governments in nearby Nepal as well as in more distant eastern Europe.

Political leaders give credit to the students for imposing a unity on the feuding political parties opposed to Gen Ershad that they failed to achieve themselves. "The mobilisation of the student movement created confidence" among the political parties that Gen Ershad could be forced out,

Ahmed: holding the ring

Student organisations in Dhaka last night appeared to be heading for a direct confrontation with the armed forces by announcing plans to seize former president Ershad, writes David Housego in Dhaka.

The students said that they would march tomorrow on the military compound in Dhaka where he is living unless he was arrested by them.

The declaration came on a day in which further signs emerged of the restlessness among units loyal to Gen Ershad at the way he was being ousted.

Fears that these units might rebel appeared to be behind an unprecedented decision to cancel the armed forces participation in ceremonies on Sunday to celebrate the anniversary of Bangladesh's liberation.

The students' decision to take the law into their own hands by seizing Gen Ershad comes amid mounting pressure for his arrest and that of his supporters.

Politicians say the army must now revert to its constitutional role and "return to barracks". But the more astute realise that they will have to reach some accommodation with the armed forces - as Prime Minister Benazir Bhutto did in Pakistan. Mrs Khaleda Zia, the leader of the Bangladesh National Party (BNP), the other main opposition alliance, is herself the widow of a general who seized power to become president.

None the less, finding common ground between the army and the students will not be easy. Senior officers will be wary of any trials which scrutinise their close involvement in business and contracts.

The army also wants to minimise their loss of lucrative privileges and patronage. Former officers occupy almost three-quarters of the posts of chairman of public sector cor-

porations and many of the top diplomatic jobs.

Attempting to hold the ring between these two antagonists is a weak caretaker administration under Mr Shahabuddin Ahmed. Mr Ahmed, a slight figure with a bushy mustache, is a former civil servant and chief justice.

His newly appointed advisers have been chosen for their honesty - but also for their lack of political ambition. The caretaker government's main task is to prepare the country for general elections to be held within three months. Once campaigning starts, the sharp differences between the two main political alliances could polarise opinion further.

Sheikh Hasina, daughter of Sheikh Mujib, who was the founder of Bangladesh, and Mrs Khaleda Zia, the wife of President Ershad's predecessor, could not be more different and openly detest each other.

Sheikh Hasina holds former President Zia responsible for the assassination of her father.

The two alliances represent different strands in Bangladesh's history which touch the core of the country's uncertainty about its national identity. The Awami League has stood firm behind its secularist philosophy - non-Moslems account for 10 per cent of the population - and back close ties with India. It also has a strong socialist past. Though Sheikh Hasina now says she would be more pragmatic and that she favours limited privatisation.

The BNP is a more aggressively pro-Moslem alliance and is suspicious of India's influence. Mrs Zia, a shrewd lady who mirrors a cosy middle-class image, speaks in vague terms of encouraging liberalisation, foreign investment and more privatisation.

Gen Ershad always believed that he would survive because of the divisions among the opposition and because he thought he had won popularity in the village through health, education and road projects. The sin for which he was never forgiven by the students was that as an army commander he seized power by force in 1982. He attempted to give himself legitimacy by elections that the opposition parties boycotted or denounced as rigged.

But what really turned opinion against him was his government's growing reputation for corruption and his own ostentatious style of living and travelling abroad.

15.50

Remember Bonanza? Well, it's back.

15.5% GROSS PA

Introducing PrestigeBond. The one year bond with high interest guaranteed.

If you want to earn some of the best interest rates in the West, money on down to your nearest branch of Nationwide.

There, as part of 'Bright Horizons', a range of four different savings accounts, you can now discover our new PrestigeBond.

This is a one year bond, which offers you quite incredible rewards for your money.

In fact, for a minimum investment of only

£1,000 you'll currently receive 14.00% gross pa (10.50% net pa for basic rate tax payers). Whilst for £5,000 you can look forward to the very handsome return of 14.75% gross pa (11.06% net pa).

If, on the other hand, you have any amount between £50,000 and £1 million you'd like to salt away, we'll gladly pay you our highest rate of 15.50% gross pa (11.62% net pa).

To prove that we really are the good guys, we

even guarantee to pay you 2.00% gross pa above our variable £1 CashBuilder gross rate, no matter what happens to the economy.

So why not open a Nationwide PrestigeBond. After all, this is one Bonanza you won't want to miss.

Venezuela plans \$25bn boost for state oil group

By Joe Mann in Caracas

VENEZUELA'S national oil company, Petroleos de Venezuela (PDVSA), will invest \$25bn (\$12.8bn) between 1991 and 1995 in its biggest development programme.

About \$10.3bn of the outlay will go to exploration and production, \$8bn to be invested in oil refining, \$6bn in petrochemicals, \$1.5bn in coal and \$800m in domestic market activities, according to PDVSA sources.

Some 40 per cent of the amount will be spent on imported equipment, materials and services. PDVSA, which had earnings of \$2.1bn in 1989 and is expected to post strong earnings this year, will finance most of the investment programme from its cash flow.

However, its petrochemical plant will require about \$3.4bn from private-sector equity partners and other sources, such as supplier credits. For the first time the company is seeking foreign investors in the exploration and production sector.

Under the programme PDVSA will increase its crude oil production capacity to more than 3.6m barrels a day, raise refining capacity by 600,000

b/d, more than triple petrochemical production capacity to 14m tonnes per year and raise coal output.

To reach its targets in the refining sector, PDVSA plans to build a new domestic refinery, add capacity to existing plant, and acquire additional capacity by investing in at least one foreign refining and distribution company. It already has equity holdings in oil companies in the US, Germany and Sweden.

Venezuela and a few Middle East countries are the only oil producers that can make a significant and sustained increase in crude oil production and exports over the long term without incurring excessively high costs. PDVSA executives are moving to position the company so it can obtain greater market share in the US and Europe.

PDVSA now produces about 2.3m b/d of crude oil and exports nearly 2m b/d of crude and refined products. Exports this year will total about \$12.6bn, a 19 per cent increase over 1989.

Open looks beyond Gulf crisis, Page 30

Low turnout undermines Colombian election

By Sarita Kendall in Bogotá

THE legitimacy of Colombia's constitutional assembly has been seriously undermined by the low turnout in Sunday's election.

Fewer than 4m Colombians — about 25 per cent of the electorate — voted for assembly candidates, compared with 8.3m who elected Congress earlier this year.

M-19, the former guerrilla movement, won nearly 27 per cent of the votes in the poll, almost equalling the governing Liberal party's vote, and is expected to have 15 of the 70 assembly seats.

The composition of the assembly, which must update the country's constitution, makes it likely the extradition of nationals will be banned, and that the question of political status and a pardon for drug traffickers will be discussed.

The issues are part of M-19's platform and have the support of some Liberals and Conservatives.

Although President César Gaviria called the election an example of democratic strength, pluralism and tolerance, former presidents and elder statesmen were dismayed by the abstention rate.

They believed this could mean putting constitutional reforms to yet another vote next year, at the end of the assembly's five-month sitting, or could lead Congress to resist clauses affecting its power.

During voting on Sunday the Colombian military bombed the jungle headquarters of the country's strongest guerrilla army, the old-style communist Revolutionary Armed Forces of Colombia (FARC).

Repeated peace initiatives by the government had failed to draw FARC rebels from the hills to join the constitutional assembly.

Unlike M-19, the Patriotic Union party, created to channel FARC guerrillas into democratic politics, never made electoral gains. In the 1990 election it won 1,000 Patriotic Union political activists, including the party's two presidential candidates, have been assassinated in the last five years.

US food credit quandary nears resolution

PRESIDENT George Bush is widely expected this week to do both himself and Soviet President Mikhail Gorbachev a favour by issuing a waiver of the Jackson-Vanik Amendment, clearing the way for up to \$1.25bn (\$641m) US food credits to the Soviet Union, writes Nancy Dunne in Washington.

Mr Bush is under pressure from farm groups and Capitol Hill to act swiftly. The Soviet Union has been refusing to buy US grain without credits, triggering politically damaging charges that the president has imposed a de facto grain embargo.

It is unclear, however, how far Mr Bush will go to help his new allies in Moscow.

If he satisfies the farmers — who want "trade not aid" — he will cause an

uproar in Congress over his failure to force closer trade ties overall and to take the lead in assisting the Soviet Union.

House Democrats urged him last week to send food, medicine and technical aid to ease food shortages in the country.

Mr Bush's waiver of the Jackson-Vanik Amendment, which ties favourable trade treatment and financing with emigration policy, could come during this week's visit to the US by Mr Eduard Shevardnadze, Soviet foreign minister. The decision has been delayed by the president's insistence that the Supreme Soviet first codify a free-emigration law.

A congressional official said efforts were under way to help the president

"out of the corner he painted himself into" in insisting on codification. One way out, he said, would be for Mr Gorbachev to issue a statement of support for "free and fair" immigration.

Mr Bush has several options. He can offer trade financing from the Commodity Credit Corporation and the US Export-Import Bank (Eximbank), or he can submit to Congress a trade treaty, signed last spring with Mr Gorbachev, which would grant Moscow long-awaited most favoured nation trade preferences.

Agriculture Department officials, testifying at a congressional hearing, suggested the Soviet Union could qualify for as much as \$1.25bn in guarantees. With the waiving of Jackson-Vanik, they could get up to \$800m in

trade financing from Eximbank. Billions more in guarantees — financing the sale of manufactured goods — could be forthcoming once other legal barriers were removed.

US business groups have been pushing for the waiver without codification. Increasingly they have been reporting concern among east European governments that they would be swamped with job-seeking immigrants if the Soviet law was codified.

Mr Donald Kendall, chairman of the American committee on US-Soviet relations and chairman of PepsiCo, warned the president last week that the US was losing ground to competitors intent on establishing themselves "as suppliers of vital goods to the beleaguered Soviet people".

Oil and Indian rights form a volatile mix in Ecuador

THE Waorani Indians, a small semi-nomadic tribe surviving off the products of the Amazon rain forest, live slap in the path of Ecuador's oil exploration programme and Ecuador derives half its export income from oil.

The shift in policy, largely due to international publicity about the plight of the Waorani and to the rain forest movement, is reflected in a detailed agreement on environmental management signed by oil companies and Ecuador's

operations will be properly planned. There is the political decision and there are resources for this work," said Manuel Navarro, who is in charge of the state oil company's environmental unit.

The shift in policy, largely due to international publicity about the plight of the Waorani and to the rain forest movement, is reflected in a detailed agreement on environmental management signed by oil companies and Ecuador's

But separating the two is not easy in the remote Amazon region, writes Sarita Kendall

energy minister. Ecologists are doubtful about the government's change of attitude. Several groups launched the "Amazon for Life" campaign, warning of dangers outside the presidential palace and in other strategic spots. They demand a 10-year moratorium on oil, mineral and other activities in Waorani territory and in all national parks.

An attempt to persuade Ecuador's constitutional court to rule against oil exploration in parks has failed because of high-level pressure on the court.

The company with most at stake is Conoco, which discov-

ered oil on the borders of the 612,000-hectare Waorani reserve and the Yasuni national park and awaits the go-ahead to develop the field. Although the crude is heavy, it can be blended with lighter oil and pumped through the Andean pipeline to the coast once the pumping stations have been upgraded.

The extra 40,000-50,000 bpd is significant for Ecuadorian production as reserves in the main Petroecuador-Texaco oilfield are dropping fast.

Conoco's development plans include special measures to protect the Waorani — vaccination and health programmes are essential — and reduce environmental effects: the 12km road running north to the River Napo will only have a 20m wide right of way, instead of the normal 100m and will be made from synthetic material.

Deforestation will be kept to a minimum by drilling one well with various branches instead of several vertical wells and by centralising production facilities.

An anthropologist who speaks the Waorani language has visited several families and been told the road is acceptable provided there is no hunting, fishing or farming in Waorani territory.

An army control post, park rangers and a private security force will be responsible for keeping new sections open and colonists will not be able to get title deeds. However, other Indians point out that the Waorani do not understand

their own situation and that, no matter the kind of road, settlers will flood along it. Many of Ecuador's 100,000 Amazon Indians have been pushed off their traditional land in recent years and the government can only break the oil-road-colonisation sequence by granting legal title to Indian communities.

About 80 per cent of the well-organised Shuar Indians in the south already have titles and the Shuar Federation is prepared to negotiate on oil. But in the central Amazon, where the oil-Indian frontier now is, titles are fewer and positions more radical, with demand for sub-soil rights.

"We are talking to Indian communities to establish priorities and Petroecuador is pushing to solve the land problem," said Mr Navarro, who acknowledges that past handouts, such as the construction of a primary school or football pitch, were short-term paternalistic actions.

The fear that the Indian and ecology lobbies will discourage foreign investment seems doubtful.

One lawyer says oil companies are much more concerned about disappointing drilling

results and desperately slow decision-making by the authorities. Only three bids were put in for the last lot of exploration blocks and contracts have not been finalised. Yet the government is already planning to offer another set of blocks in the hope of attracting more investment.

Oil contributed nearly 50 per cent of the country's fiscal income and some 12 per cent of GDP in 1989. Mr Diego Tamayo, the energy minister, calculates that the Gulf crisis will earn Ecuador an extra \$240m (\$125m) this year — about equivalent to the current level of foreign reserves. While this is a welcome bonus, it would cover only a fraction of the arrears on the foreign debt.

Few people suggest that Ecuador can afford to stop oil exploration, though many stress that longer-term development alternatives for the Amazon region must also be found.

"One of the most useful things the government can do is to give more land to high-land peasants. Then there wouldn't be so much migration to the Amazon and the Waorani would have more time," said a Shuar Indian.

Bush to unveil extensive bank reform proposals

By Peter Riddell, US Editor, in Washington

SWEEPING proposals for US banking reform will be included in President George Bush's State of the Union address at the end of January.

Plans are likely to be included in an accompanying Treasury paper, which has been previewed by Mr Nicholas Brady, US Treasury secretary. Mr Martin Fitzwater, White House spokesman, said yesterday there would be a "major reform, since the banking system needs to be examined very closely. It is weak in many areas and we believe we need to look at it from the total reform standpoint".

Legislation would be a priority in the next congressional session, he added.

far-reaching since the 1930s, would remove some restrictions on what banks can do — the Glass-Steagall barriers between investment and commercial banking and limits on inter-state branches — while limiting the level of regulation and deposit insurance premiums to the financial health of institutions.

The \$100,000 federal guarantee on deposits will be retained, but the extent of protection and taxpayers' liability will otherwise be limited.

There is general congressional support for changes in the deposit insurance premium, but there is no consensus on other changes which might threaten the independence of small and regional banks.

India seeks Third World strategy on trade issues

By K.K. Sharma in New Delhi

INDIA IS to host a conference of Third World countries before the next ministerial meeting in the Uruguay Round to enable them to evolve a common strategy on trade and trade-related issues.

Dr S. Swamy, India's new minister of commerce, said on his return from last week's abortive talks in Brussels that the previous government of Mr V.P. Singh had failed to give a lead to developing countries on these issues.

The minister also blamed the Singh government for compromising on such issues as intellectual property rights and patents, and declared his determination not to give in to the industrialised countries on these questions.

"If they force an agreement on us, we can opt out of the Gatt system and go it alone," Dr Swamy said.

However, he hoped common ground would be found before the next ministerial-level talks, although he made clear that India wanted the issues to be dealt with outside the Gatt system under a separate organisation.

Dr Swamy said India was on the side of Washington on the question of reducing agricultural subsidies in Europe. This would lead to higher agricultural prices and enable India to increase its agricultural exports, something in which he saw an enormous potential.

He has invited Mrs Carla Hills, US trade representative, to visit India for talks.

The US last year placed India on its "hit list" under the "Super 301" clause of the Trade Act, and the minister was hopeful of arriving at an agreement on various Indo-US trade issues.

On the Brussels talks, Dr Swamy criticised the developed countries for reducing a multi-lateral conference on multilateral issues to a bilateral conference between the US and Europe on a single issue, that is, the question of agricultural subsidies.

In the process, he declared, the interests of the Third World had been ignored. However, this gave them the time to formulate a common strategy before the next ministerial talks.

Finland and Soviet Union to trade in hard currency

TRADE PAYMENTS between Finland and the Soviet Union will in principle be made in convertible currencies from the beginning of 1991, ending the barter-type clearing system, the Foreign Ministry said, Reuters reports from Helsinki.

Outstanding deliveries agreed under the current five-year bilateral trade framework agreement will continue for six months under the old system, Mr Timo Repo, general secretary of the Finnish-Soviet economic commission at the ministry said. Mr Repo said the biggest change would be that imports of oil and energy would be freed. State-controlled trade is Finland's only importer of crude.

A foreign ministry statement said Mr Stepan Sitjaran, the Soviet deputy premier had confirmed that because of the reform of Soviet foreign trade there were no technical grounds for satisfactory operation of the bilateral trade system or for gradual change in the system.

Finland trade officials had been hoping for a transition period in the change-over to free currency trade.

Mr Repo said, "We have been negotiating about a transition period and we tried really hard to have such an agreement but it turned out to be impossible."

The idea was opposed by Soviet energy exporters, he said. Mr Kari Holopainen, head of the Bank of Finland's bilateral trade department, said the clearing account currently showed a Rhs300m surplus in favour of the Soviet Union.

Another so-called special account showed a surplus of Rhs60m in Finland's favour. All the debts should be cleared at the end of the six-month period, he said.

Finland and Soviet officials would begin negotiating changes to the trade and payments agreements in Moscow on Tuesday, the Foreign Ministry statement said. Mr Repo said a new five-year framework trade agreement would be drawn up by the end of this year when the current one expires.

Mr Erkki Palmqvist, deputy head of the Trade and Industry Ministry's trade department, said: "The most powerful basis for argument that we should have this import licensing system concerning fossil fuels has been the bilateral trade system."

Search for new financial services forum

By Peter Montagnon, World Trade Editor

US private-sector executives will look for an alternative forum for negotiating an international agreement to liberalise trade in financial services if the Uruguay Round of multi-lateral trade talks ends in failure.

US financial executives involved in the talks to open up markets for both banking and insurance say they have made considerable progress towards an agreement and are reluctant to jettison the work they have done.

Last week's ministerial meeting in Brussels saw the clearing of draft proposals for financial services liberalisation by Canada, Sweden, Switzerland and Japan. They were welcomed, albeit with some reservations, by both the US and the European Community.

But completion depends on a successful outcome to the entire Uruguay Round, now in doubt after the world's trading nations failed last week to agree on reductions in farm subsidies. Last week's talks were adjourned indefinitely.

One possibility is that the Organisation for Economic Co-operation and Development could be called on to complete the agreement on financial services. Though the OECD groups only industrial countries, some advanced developing nations such as Mexico and

South Korea have subscribed to its codes of practice in other sectors, notably steel and shipbuilding.

But the idea of using the OECD remains controversial. British lobbyists say it still would not allow a broad enough catchment of developing countries whose financial markets represent the largest commercial opportunities.

Other negotiators say they are hesitant about raising the matter formally while there is still a chance of saving the Uruguay Round. Though the Round has been seeking a broad agreement to open markets in a wide range of service industries, the financial sector

has posed special problems because of the need to combine rules to liberalise trade without limiting government freedoms in monetary policy and while retaining a body of rules to ensure stability in the financial system.

These twin objectives have previously put trade policymakers at odds with finance ministry and other officials responsible for regulating the financial services sector.

Last week's proposals go a long way towards overcoming this split. This is why support is growing for the idea of completing an agreement on financial services whatever the outcome of the Round.

Yesterday's speech reaffirmed Mr Hawke's comments last Friday that Australia might try to associate itself with the North American trade bloc which may emerge from talks between the US and Mexico, following an earlier agreement between the US and Canada.

Mr Hawke said the EC's intention to raise the prospect of a global slide into regional trading blocs, accompanied by an increase in political and economic tensions.

"If Europe will sacrifice Gatt

Nissan drops pact to make VW Passat in Japan

NISSAN Motor has cancelled an agreement to assemble Volkswagen Passat vehicles in Japan, after poor sales results for the imported version of the model, Robert Thomson reports from Tokyo.

The two companies had agreed that Nissan would assemble the vehicles from next summer at its Zama plant, near Tokyo, but Nissan has decided to use the production line for its own models.

Nissan has marketed fully-imported Passats since May this year, and has set an initial sales target of 700 units a month.

But average sales have only been 200 per month, well below the planned Japanese production figure of 1,000 per month.

A Nissan official said the Passat has apparently sold slowly because it is more than 10m dearer than "Japanese models of the same class of car". Present sales levels do not justify assembly in Japan.

Though Nissan will continue to market the imported Passat, the official said.

The Passat was chosen as a replacement for the VW Santana, which Nissan assembled here from 1983 until 1989.

Both companies insisted yesterday the cancellation of the assembly agreement will not mark the end of their close links, and that technical exchanges will continue.

Malaysia to buy Hawk fighters

Malaysia signed a Ringgit 2m (\$402m) agreement with British Aerospace yesterday, to buy 28 Hawk jet fighters, AP reports from Kuala Lumpur.

The contract includes purchase of related equipment, ammunition, training, technical services and spare parts.

Under the agreement, the Malaysian government will buy 10 jets of the Hawk 100 series and 18 of the 200 series. The Hawks are the largest purchase under the Ringgit 4.5 m memorandum of understanding to buy military equipment signed between Malaysia and Britain two years ago.

NEW CANADIAN GOLD MAPLE LEAF

Produced by the Royal Canadian Mint in pure gold. Now available from the largest retailer of gold coins in the U.K. We offer highly competitive prices, whether you are buying or selling.

Telephone now for details.

Spink SPINK & SON LTD, 5 King St St. James's, London SW1Y 6OS Telephone: 071-930 4772

Handwritten note: "Jep 11/10/90 150"

And our achievements are spread over areas as diverse as space, defence, transport and communications.

So, if you're looking for solutions in advanced technology, come to us. We think you'll like our thinking.

MAIRA is the world leader in fully automated urban transit systems. Lillo, Orly, Toulouse, Bordeaux and Nantes, Chicago, Jacksonville and Taipei have adopted the third-station VAL system. Throughout the world MAIRA's sophisticated train control systems are responsible for safely transporting more than 12 billion passengers every day.

CREATIVE HIGH TECHNOLOGY

The road to PC mobility

is often paved with minor advances.

But now a major breakthrough: the T3200SXC.

The Toshiba T3200SXC is a revelation, even to us, the market leader. Revolutionary Thin-Film Transistor screen technology provides a superior VGA colour image for all your work. But unlike a desktop PC, you can take this colour screen with you. The T3200SXC brings a blaze of 256 colours to your presentations and conferences wherever they are.

No less stunning than the T3200SXC's screen is its power. The 20 MHz i386SX microprocessor races through applications stored on the large 120 MB hard disk.

Memory expandable to 13 MB provides flexible options for memory-hungry programs and advanced operating environments like UNIX, OS/2 and DOS with Windows 3.0.

Add to this Toshiba style and quality, a full-size keyboard and built-in industry-standard expandability, and you'll understand why top professionals are saying goodbye to their desktop PCs and heading for their local Toshiba dealer - to enjoy the advantages of this major breakthrough: the T3200SXC.

UK NEWS

Banks join forces to counter the money launderers

David Lascelles reports on new guidelines issued for banks on how to spot and report ill-gotten gains

A UK bank branch was first alerted when a strange man started exchanging large amounts of cash for foreign currency on frequent visits. He was known to have an account at another branch nearby, and his visits had no obvious legitimate purpose. The bank passed their suspicions on to the authorities.

The man turned out to have previous convictions for drug offences and an investigation ensued. He was eventually arrested and convicted for importing cannabis.

This story is one of five related in a pamphlet issued yesterday by the UK banking industry and the Bank of England to back up their campaign against money laundering. It makes extensive reading, as is the intention.

It describes, for example, no fewer than 44 different types of suspicious transactions, ranging from rather obvious ones like "customers whose deposits contain counterfeit notes or forged instruments", to tell-tale signs among a bank's own staff that they might be criminal accomplices; for example, if they adopt lavish lifestyles, or show an unexpected increase in salary.

Although the UK has no fewer than four statutes outlawing the ill-gotten gains of drug-running and terrorism,

several non-statutory initiatives have been necessary to drive home the message to the banking industry that it has a special role to play.

Last year, a committee of international bank supervisors issued guidelines for banks, and the Bank of England threatened to revoke the licences of banks which did not comply. Last April, an international working party of the Group of Seven industrial countries backed this up with calls for closer international co-ordination.

Yesterday's "guidance notes" were a joint exercise by the banking industry, customs and the police under the chairmanship of the Bank of England, to make all this work at the practical level.

Much of it gives advice on how banks can set up internal systems to spot suspicious money movements, and how they should train their staff.

Among the most important points is that banks should carefully verify the identity of new customers. The guidance notes say banks must obtain the best possible identification documents: it lists these in order of reliability as passport, armed forces identity card, employer identity card and full driving licence.

Documents which can easily be obtained or forged are less good. These include birth cer-

Graham Kentfield, chairman of the working group on laundering, pictured yesterday.

tificates, credit cards, student union cards and provisional driving licences.

Banks are advised to meet new customers personally and to avoid opening accounts by post. Banks must also keep records for up to six years to facilitate investigations.

Potentially the trickiest part of the guidelines covers the reporting of suspicious transactions. The dividing line between legitimately alerting the authorities to possible

criminal activity and breaching customer confidentiality is not clear. But, as the guidelines emphasise, banks have a statutory duty to report suspicious transactions, and by so doing they exonerate themselves from a charge of complicity.

The procedures for alerting the authorities are laid out in detail. Staff, the guidelines say, must be encouraged to co-operate fully with the law enforcement agencies and to

provide prompt advice of suspicious transactions.

One thing missing from the guidance is the size of the problem.

Mr Graham Kentfield, a senior Bank of England official who launched the notes yesterday, said it was virtually impossible to obtain reliable statistics. The G7 group earlier this year estimated that illegal drugs money amounted to \$120m a year, of which \$20m was laundered through banks.

How much of this passes through London is not known.

Unlike the US, where the law requires all international money transfers over \$10,000 to be automatically reported, the UK has opted for a reporting system based on suspicion, which is why banking staff have to be trained to spot unusual behaviour.

Detective Inspector Tim Wren of the National Drugs Intelligence Unit said yesterday that a suspicion-based system was much more effective than blanket reporting. About 30 per cent of the reports received by the NDIU created new cases or contributed to existing ones, he said.

Yesterday's notes are far from being the end of the anti-money laundering drive. The guidance will soon be extended to cover the insurance and investment fields, and even into areas where criminals might seek to convert their cash into valuables, like the fine art auction business, jewellers, car dealers and bureaux de change.

By the end of this year, the EC also hopes to finalise a directive outlawing money laundering.

It too will propose a suspicion-based system, though banks will be obliged to report transactions of over 10,000 Ecu with non-customers. *Leader, Page 16*

Union negotiators at Peugeot Talbot to recommend pay deal

By Lisa Wood, Labour Staff

TRADE UNION negotiators at Peugeot Talbot will today recommend acceptance by their members of a two-year pay package, which they say will be above inflation.

The company agreed the offer with the unions in return for talks on simplifying pay grades and the possible introduction of performance-related pay.

On offer, say the unions, is a 12 per cent rise for 1991 on basic pay and a 7 per cent rise the following year, with a profit-related element of at least 2.5 per cent of basic pay each year. Inflation has recently been running at about 10.7 per cent.

Peugeot Talbot said the basic offer was not 12 per cent, and described it as 10.5 per cent with an additional 1.5 per cent on basic rates. The aim is to set up a joint working party in the New Year to investigate the rationalisation of pay grades and the introduction of pay based on merit.

The offer, which has been agreed unanimously between company and union negotiators, is in line with rises at Ford, Vauxhall, Jaguar and Rover.

UK employees at Nissan, the

Japanese car manufacturer, last week agreed to a 10.5 per cent rise, the lowest among British car workers this year.

Mr Tony Woodley, national officer for the motor industry for the TGWU general union, was pleased with the deal but stressed that "members have earned it" through improved productivity.

He said the agreement guaranteed improvements in the standard of living of Peugeot Talbot workers over the next two years, and also included improvements in the sick pay scheme, hospital and maternity leave.

Peugeot Talbot has five pay scales for the 4,000 hourly-paid workers which it wants to reduce to two technicians and operatives. It also wants three pay bands within each grade to reflect individuals' jobs.

Peugeot Talbot is understood to admire the UK personnel operations of Nissan, where staff are salaried and paid within bands which reflect individual performance. From January 1 Nissan's manufacturing staff will earn £13,408 to £14,583 depending on performance. The average Peugeot Talbot worker will earn just over £12,000.

Hopes of cut in interest rates hit by weak sterling

By Peter Norman, Economics Correspondent

STERLING'S weakness yesterday dented hopes of an early cut in UK interest rates despite government figures showing retailers in their biggest slump for 10 years.

The provisional estimate of retail sales in November showed that Britain's high streets are experiencing their worst trading conditions since the recession of 1980-81.

But a 2.5 pence fall in the pound's value against a strong Deutsche mark and its weakness against other currencies in the European Monetary System further lengthened the odds against a cut in bank base rates from their present 14 per cent before Christmas.

The Central Statistical Office reported yesterday that the seasonally adjusted volume of retail sales fell by an unexpectedly sharp 0.5 per cent last month and was 0.5 per cent lower than in November last year.

Volume sales in the three months from September to November were 1 per cent lower than in the previous three months, indicating an annualised rate of decline of around 4 per cent. According to the Treasury, November was the fourth successive month in which the three-month sales figure had fallen. The last comparable decline in sales was in 1980-1981.

The Retail Consortium, which claims to represent 90 per cent of the UK retail sector, said that the downturn in sales was now affecting all product areas, including food and drink which had been resistant to the effects of high interest rates.

Coinciding with yesterday's bleak news from the high street, the government released producer price figures pointing to an easing of inflation.

Honorary pressures in Britain's factories.

In response, both the Retail Consortium and the Confederation of British Industry, the employers' association, called on Mr Norman Lamont, the chancellor, to lower interest rates to ease hardship in the economy.

However, the gathering consensus in the City was that the government could not cut rates with the pound the weakest member of the EMS exchange rate mechanism by a clear margin. It closed in London last night at DM2.825, some 8.75 pence below its DM2.95 central rate.

In recent weeks the Bank of England has made no secret of its opposition to any fall in UK base rates so long as sterling is weak. For three Fridays in succession it has lent funds to the money market at 14 per cent even though the three-month interbank rate has been signalling expectations of a base rate cut. The Treasury is discreetly letting it be known that it fully supports the Bank and that there is no conflict between the two institutions.

"There is an overwhelming domestic case for an interest rate cut," Mr Keith Slocum, chief economist of James Capel & Co, the London stock broker, said yesterday. "But the pound is a problem."

Sterling's fragility was underlined yesterday when it fell on the news of the drop in retail sales. Its weakness was compounded by uncertainty over Mr Lamont's determination to defend Sterling's EMS parity, speculation that the Bundesbank may raise its interest rates at its policy making council meeting on Thursday and small upward movements in Dutch and Belgian interest rates.

Inflation eases as tougher business climate takes hold

By Peter Norman, Economics Correspondent

BRITAIN'S inflationary pressures eased at the factory level in November reflecting tougher business conditions and lower oil and metals prices.

According to provisional figures released yesterday by the Central Statistical Office, prices for home sales of manufactured goods increased by just 0.2 per cent last month and November.

This slowed the annual inflation rate of factory gate prices to 5.8 per cent last month from 5.9 per cent in October and brought the annual rate of output price increases well below the 6.3 per cent levels recorded in May and June this year.

At the same time, the prices paid by industry for fuel and raw materials fell by 0.2 per cent last month and a more pronounced 1.3 per cent when adjusted for normal seasonal variations.

The CSO said that a seasonal increase in the cost of electricity for industry was more than offset by falls in the prices of petroleum products and metals last month. Altogether, input prices fell by 2.4 per cent com-

pared with November 1989, following a 0.7 per cent fall in input prices in the 12 months to October.

The input prices index has now fallen for six of the past seven months compared with 1989 levels.

While last month's output price developments were broadly in line with expectations, the 1.2 per cent drop in the seasonally adjusted input prices was greater than forecast by most City analysts.

The Treasury said it was not surprised by the news and forecast further falls in producer price inflation over the coming 12 months providing the rate of increase in earnings also slows.

The government's Autumn Statement last month forecast a fall in annual producer output price inflation (excluding food, drink and tobacco) to 5 per cent by the end of next year from 6.25 per cent in the present quarter.

The latest figures show that this measure of factory gate inflation slipped to 5.8 per cent last month from 6.4 per cent in October.

OUR COPIERS TURN OUT AWARD AFTER AWARD. CAN YOURS?

Winning a "What to Buy for Business" Certificate of Excellence is not easy. Especially not in the Super Giant Copier Supplier Of The Year category.

And definitely not four times in succession.

But then reliability and dependability have always been features associated with Kodak.

But what have we done to deserve such accolades? In the words of "What to Buy for Business" magazine Kodak are "... the company offering the super giant user the best customer support combined with machines of proven reliability and high copy quality."

Which again in their words is "... of greater worth to the end user than the most advanced technological developments."

So remember this next time you're considering which copier company to use for your business.

They may well all supply machines that stack up documents. But only Kodak boast a service that stacks up awards.

For more information on how Kodak can help you in your business just contact June Sweet on 0442 61122 extension 44828.

Nissan Primera. Compare this to what you call comfort.

Nissan announces the Primera.

A car that, before being introduced, has spent the past several years being tried, tested even tortured all over Europe.

A car that in fact was built for only one, much more important, confrontation. Its meeting with you (you could say the Primera was built to be compared).

Let's step inside and compare the Primera on comfort. There's sufficient space in the Primera's interior to allow you, your passengers and all their luggage to really stretch out.

And this you can experience in "fatigue-free" seats which can be adjusted to suit every need.

But comfort isn't merely a question of seats. Cockpit and dashboard are designed for a better view, better operating controls and less hassle.

The completely new Multi Link Front Suspension system then guarantees you incomparable comfort on roads that go from poor to worse to worst.

All this to assure you of driving pleasure on distances that go from short to medium to long.

However the Primera was not created as an advancement over other cars merely in terms of its comfort.

Its performance, its styling, its quality, all are designed to stand up to your scrutiny.

As you realise as you match the performance of its 16 valves in every Primera gasoline engine with your own.

And as you sit back and think about the bumper-to-bumper 3 year warranty we give you.

And your comparison is not only true for the four door sedan but also for the five door hatchback and station wagon.

There now seems to be only one question left unanswered: when would you like to compare the Primera?

Nissan Primera.
The new performance car for a country called Europe.

THIS MODEL IS A NISSAN PRIMERA SLX. ALL SPECIFICATIONS MENTIONED ARE BASED ON THE MODEL SHOWN AND SUBJECT TO POSSIBLE CHANGES.

BUSINESS OPPORTUNITIES

BUSINESS SERVICES

IS 'REMOTE CONTROL' ACCOUNTING
THE ANSWER TO YOUR DILEMMA?

Has rapid expansion brought human resource problems?
Is paying for your accountancy department one of your
biggest costs?

Is your accounting as accurate and efficient as you'd like?

CHART ASSOCIATES are currently providing a full
accounting administration and computing service for a large plc
with bases throughout the UK. A stable workforce of high quality
staff and low operating costs are giving them an efficient cost
effective service.

Why not consider transferring all or part of your accounting
function to a remote, off-city centre location with all its advantages
of savings in property and staffing overheads? Our team of high
calibre professionals could be the answer you are looking for.

Contact Ian Mackay at Chart Associates, Warehouse Road,
Springfield, Slough FK7 7SR. Tel: 0780 50033 for further details
on how we can help you.

LETTERS OF CREDIT * TRADE FINANCE *
* CONFIRMING *

- How is your Bank? Still supporting you!!
- Is your trade finance house withdrawing from the market?
- Should you secure an alternative just in case?

Argent Credit Corporation PLC is continuing its expansion
and therefore looking for new business.

If your company turns over in excess of £1 million per annum,
call Charles Royall on 0628 668706 or write to him at:

BUSINESSES FOR SALE

CWC Freight Group Ltd.

Consisting of 3 Divisions: Joint Administrative Receivers of CWC

■ Cotrail - Wine and Spirits Freight Freight Group Limited offer for sale the
above businesses and assets.

Forwarder: Offers will be considered for the
individual divisions or the company as
a whole.

■ Containerway - Customs approved
"Inland Clearance Depot"

■ WIF - Freight Forwarder of large
single items in and out of Great Britain.

■ Turnover in 10 months to
October 1990, £5,756,000.

■ Employs approximately 74
people.

■ Occupies leasehold prem-
ises in Barking, Essex.

D.J. Patten and M.E. Mills, **ERNST & YOUNG**

Authorised by the Institute of Chartered Accountants in England and Wales to carry on investment business.

Scarlett Group Limited

(In Receivership)
London

The above company is Europe's largest independent prestige
recording company, owning The Power Plant and Maison Rouge
studio complexes in North West and South West London:

- 2 fully equipped freehold recording complexes
- 8 recording studios
- Bar/restaurant at each complex
- The company has 3 wholly owned subsidiaries:
- a developing music publishing company with control over a
growing catalogue of songs
- a business which has contracts with several internationally
recognised producers
- a recently established production company which has
recently completed 2 LP recordings

For further details please contact the Joint Administrative
Receivers: Maurice Withall or Iain Allan, Grant Thornton,

Underrated artists

William Packer on London exhibitions

Four shows now current in London, of the work of two Englishmen and three Germans, demonstrate just how mistaken it is to rely too heavily on entrenched judgements and museum opinions.

David Bomberg was always a special case, known yet long underrated and ignored. Two fine retrospective groups of work, of paintings at Bernard Jacobson (14a Clifford Street W1: until January 19) and of drawings at Gillian Jason (44 Inverness Street NW1: until January 11) mark the centenary of his birth. At Agnew's (43 Old Bond Street W1: until January 4), three German realist painters, Erich Wolfstiel and two of his pupils, Lotte Laserstein and Gottfried Meyer, show how much there is still to discover of the German figurative tradition in the 20th century. And with Michael Ayrton, at Austin/Desmond (Pied Bull Yard, 15a Bloomsbury Square WC1: until January 19), we may reconsider the achievement of a flawed but real talent.

At first the problem with Bomberg was that he was both recognised and dismissed as having been a significant figure within a minor movement, his youthful gift exhausted in the brief, energetic life of Vorticism in the few years before the First World War. With more recent researches into Vorticism within these past 20 years, and its consequent elevation in critical standing, that early contribution was no longer to be dismissed with so light a condescension, but still the later work was disregarded, the mere flourishes of a talent in decline.

Slowly the point has been taken, however, that change and development in an artist's work need not be taken as an inevitable mark of deterioration or moral collapse, even though they may seem to incline him away from the accepted canons of modernist orthodoxy. And these two shows, the paintings especially - which all date from well after the Vorticist period, make clear just how famous if always was ever to be Bomberg as anything less than a major and extremely modern artist.

The world has now come round again to figurative expressionism, and Bomberg's influence as a teacher, with such artists as Auerbach and Koseoff his pupils at the Borough Polytechnic after the last war, is well established. But still he remains virtually unknown

abroad, and even in England his own work is often thought difficult where it is not inconsistent. The truth is that many of his landscapes, from the 1920s to the '50s, are as brave and fine, and rich and beautiful too, as any done anywhere in modern times. Spain proved to be a particular inspiration, his Spanish landscapes the best of all. But here the single flower painting, of 1945, so low in tone, rich and warm in colour and as actively monumental as any of the landscapes, is better still.

Of the three Germans at Agnew's, Wolfstiel died in 1959 at the age of 71, having spent the last 20 years of his life in exile in England, while Laserstein and Meyer are still alive, in their 90s and late 70s respectively. Lotte Laserstein is undoubtedly the star of the show, both in number for quality of the work, but all are remarkable as much for their technical command as for their imaginative and psychological force, and should be taken as they are presented, together.

Their common subject is the human figure, neither idealised nor subject to any purely academic scrutiny, but seen and registered as a direct and individual human presence and personality, no matter whether the model is a long familiar friend or taken in off the street. The statement is invariably straightforward and unambitious, for all that it is so powerfully felt and understood. Entirely modern in itself, it remains quite unaffected by any self-conscious modernism, and thus stands firmly in the great figurative tradition of northern Europe, that goes back through Rembrandt to Holbein and Dürer.

The particular lesson for us here is that such conspicuous - I nearly said phenomenal - technical command, and the necessary disciplines of its acquisition, are in no way inimical to personal and imaginative expression: indeed they are a function of it, and they rebuke us for our cavalier abandonment of them in our art schools 25 years ago. In a sense, this would be no case of the virtual rediscovery of forgotten talents, and the large Laserstein, the "Discussion" of 1931, of three of her friends, including Meyer, in animated debate, would be in the Tate.

Michael Ayrton, who died in 1976 at the age of 54, was that characteristic figure of British cultural life, the artist who is too clever for his own good. By that I mean not that artists should not be clever, but only that Ayrton was hampered

'Boy with a motorcycle' by Lotte Laserstein. Oil on panel

and ultimately frustrated by an intellect that could get him on the Brains Trust but would never stand aside. Always it would interrupt the intuitive imaginative processes. Polymathic and especially deeply read in the classical mythology that so fired the neo-romantic imagination, he was forever producing the painting and sculpture that he somehow thought so clever a man ought to be producing, rich in literary and recondite reference to gods and fabulous creatures, to Icarus and the Minotaur, Helen and her fallen suitors.

But for all his limitations, even perhaps by the very struggle in him that they inevitably produced, something substantial comes through in the work, a dogged integrity and commitment that are entirely admirable. The mystical landscapes are unfamiliar, and indeed free in their expression than we have come to expect. There is more here to Ayrton than we might have thought.

Composed for the Alban Berg team, Rihm's Quartet no. 4 proved to share several features with the Schmittke quartet. Each sets the darker viola-and-cello duo grimly against the violin pair, makes histrionic points where the musical progress is arrested by aggressively repeated chords or single notes, prescribes a sour, exaggerated vibrato for this or that voice, slips comically into an older mode which is then subverted by a Russian chorale near the end of the Schmittke, a lyrical post-romantic episode in Rihm.

Not for the first time, Rihm put me in mind of the playwright Howard Brenton: plenty of curled bile, not much structure beyond what he sets out to undermine anyway. Rihm, however, is briefer and more quizzical than Schmittke or Brenton. His musical material is developed within tight, audible constraints, and against the "irrational" interruptions acquire their force by being so controlled. The effect is prickly and truculent, as if the composer were jeering at ordinary quartet-expectations without offering a new form.

There are stronger Rihm pieces, more persuasively black, but for this fourth quartet, despite its dedication to the ultra-civilised Alban Berg players are the right people to characterise the angry too-muchness which is its furthest and most heartfelt suit. Schmittke suited them better. What drives his Fourth Quartet (new last year) is honestly despairing passion, very

much in the line of Shostakovich: in detail often crudely written, and with obvious magpie-borrowings, but charged with feeling that the Berg team knew how to capture with intense sympathy. It was a searching enough performance to wring out of the score everything that it's worth.

For Stravinsky-lovers and many others, the announcement of a live performance of Les Noces causes a twinge of excitement. It needs four pianos, a lusty chorus prepared to work hard at their phonetic Russian, and - because the tricky rhythms are so exacting - a lot of rehearsal time so it isn't heard often. The Royal College of Music announced it for their South Bank concert on Thursday at the QEH, with a sturdy quartet of established solo singers.

It didn't happen. Instead, the conductor, Edwin Roxburgh, conducted the Chorus of the Chorus, with the piano and cello duo grimly against the violin pair, makes histrionic points where the musical progress is arrested by aggressively repeated chords or single notes, prescribes a sour, exaggerated vibrato for this or that voice, slips comically into an older mode which is then subverted by a Russian chorale near the end of the Schmittke, a lyrical post-romantic episode in Rihm.

Der fliegende Holländer

BAVARIAN STATE OPERA, MUNICH

Ten years ago, Herbert Warkisch set the *Dutchman* entirely within the four walls of a bourgeois townhouse, with Senta yearning for emancipation. It was one of the more adventurous products of the Everding years, but Wolfgang Sawallisch hated it, and it lasted just 25 performances - a message tally by Munich standards. This time, staging was Sawallisch's chance to set the record straight. He sacked Nikolaus Lehnhoff as producer when their views became incompatible, and brought in Henning von Glerke, a painter whose previous experience of opera amounted to designing two Werner Herzog productions (one including *Lebende Leinwand* at Bayreuth).

To Glerke's credit, this *Dutchman* is never less than picturesque, it provides the minimum of fuss for the principals and will withstand any number of revivals. We are unmistakably back in the world of Wagner's "romantic opera", with traditional costumes and wooden sailing ships, a proper painting of the

Dutchman in Daland's house (which has a ceiling shaped like the ribs of a ship's keel), and an apothecia in which Senta and the Dutchman both jump (rather comically) to their deaths.

After the cool intellectualism of this summer's Bayreuth production, Glerke's naive and passive approach - with its Nordic colours and silhouettes, its visual illusions and sweeping skies - comes as a welcome relief. But like the vast gold-framed seascape along across the proscenium in the overture, it remains an artist's impression - the *Dutchman* becalmed and dramatically inert.

The real dynamism comes from the pit, where Sawallisch, coupled with his passion and an unerring sense of how to place a crescendo. His is an all-embracing view of the work, emphasising the music's seamless rather than its stylistic and structural leaps, integrating the brass into the orchestral fabric rather than playing it up for effect. This is Wagner conducting in the finest

Munich tradition, completely at the service of the composer.

Apart from the chorus, there were two outstanding performances on stage, in roles that are all too easily type-cast. Erik confirms Peter Seifert's maturing talent; his tenor is soft and penetrating, and the tone never grates. He sings and acts intelligently, and makes a powerfully-built, credible young sailor. Jaakko Ryhänen is the latest in a distinguished line of Finnish basses to have made their mark at Daland. The voice is large and flexible, and there is never a hint of caricature. Bernd Weikl, dressed more like a Spanish nobleman than a Dutchman, seemed to dream his way through the part.

Julia Varady's Senta was characteristically intense and feminine. There may not be much push in the lower register, but lines like *Ich trete dir bräutigam*, sung with a thread of voice, show what a powerfully expressive singer-actress she is.

Andrew Clark

Music on the South Bank

The Alban Berg Quartet have renewed their South Bank contract as a "resident" ensemble, which is good news, and on Sunday they gave their first concert of the current season in the Queen Elizabeth Hall. An odd programme - two little Mozart flute quartets (with a distinguished flautist, Aurèle Nicolet) stuck between gritty, expressive quartets by Schmittke and Wolfgang Rihm; and further unbalanced by replacing one of the advertised Mozarts - his one "mature" flute quartet, *A major K. 295* - with the dubious confession in C, K. Anh. 17. Though the flute is always wonderful to hear, it really is time that the South Bank management asked itself how often it can sell one programme and then let a different one be played.

Composed for the Alban Berg team, Rihm's Quartet no. 4 proved to share several features with the Schmittke quartet. Each sets the darker viola-and-cello duo grimly against the violin pair, makes histrionic points where the musical progress is arrested by aggressively repeated chords or single notes, prescribes a sour, exaggerated vibrato for this or that voice, slips comically into an older mode which is then subverted by a Russian chorale near the end of the Schmittke, a lyrical post-romantic episode in Rihm.

Not for the first time, Rihm put me in mind of the playwright Howard Brenton: plenty of curled bile, not much structure beyond what he sets out to undermine anyway. Rihm, however, is briefer and more quizzical than Schmittke or Brenton. His musical material is developed within tight, audible constraints, and against the "irrational" interruptions acquire their force by being so controlled. The effect is prickly and truculent, as if the composer were jeering at ordinary quartet-expectations without offering a new form.

There are stronger Rihm pieces, more persuasively black, but for this fourth quartet, despite its dedication to the ultra-civilised Alban Berg players are the right people to characterise the angry too-muchness which is its furthest and most heartfelt suit. Warhola!

OFFSTAGE DOWNSTAIRS

The most indicative line in *Warhola!* comes at the end of the programme notes: "And thanks of course to Armistage Shanks for the toilets." Flushing and looing indeed are central to the piece. So are tape-recorders, telephones and vacuum cleaners.

In the background there is a can of Campbell's condensed black bean soup. For this is the world of Andy Warhol, whose original surname was Warhola. *Warhola!* is not exactly a play, but more a monologue conducted on the telephone. Character B, played by Prunella Gee, talks and talks from her apartment on one side of the stage to character A (Andy Warhol) played by Snoc Wilson, who listens and occasionally grunts on the other.

This is one of the few times when one has wanted to congratulate an actress for remembering the lines. Ms Gee has a veritable torrent, nearly all about cleaning and flushing.

The piece opens with her sitting on the loo where she manages to drop the ash down the pan, and use the phone. Oddly enough, there is nothing terribly off-putting about this. Ms Gee wears red knickers and an apron advertising soup. The set is bright and clean like a Warhol painting.

B spends most of her time

Prunella Gee and Snoc Wilson

explaining how she keeps it that way. It is not just the cleaning, she says, but the sorting out. For example, nothing in her files should be labelled "miscellaneous", yet there are always bits and pieces which defy being categorised.

She is as obsessed with cleaning her body as with vacuuming her apartment. The best means of disposing of what she does not want is to flush it down the loo, though that can lead to problems such as, for instance, the hypodermic needles refusing to go down. It can also lead to opportunities. B likes to "polaroid" the water as it surges before the garbage disappears.

Sometimes the picture comes

out looking remarkably like modern art. Indeed one of the few times A stirs from his chair is to have a go at doing the same thing himself. A records the telephone calls, just as we learn B has had sex since 1968: the telephone is, of course, a substitute for sex.

It ought all to be rather nauseating, but is not. Snoc Wilson is a superb Andy Warhol in a virtually non-speaking part. The piece comes from a chapter in Warhol's book "The Philosophy of Andy Warhol". It is produced by Chris Pickles and, as a curiosity, is worth seeing.

Malcolm Rutherford

Ravel's L'Heure and L'Enfant

NEW YORK CITY OPERA

Three years ago, Glyndebourne presented a double bill of Ravel's *L'Heure espagnole* and *L'Enfant et les sortilèges*, produced by Frank Corsaro and designed by Maurice Sendak. It was not much liked. The New York City Opera, however, must have perceived some merit in the show: this season it recreated the bill for a run of ten performances in eight days, with alternating casts.

While disliking and deploring Corsaro's and Sendak's contributions, I didn't find the evening totally unbearable. Guido Ajmone-Marson secured delicate orchestral playing, and across the two casts there were some good singers: Anna Steiger's Concepcion was vivacious and merrily sexy, Jan Opalach, a somewhat pompous singer, was a natural for Don Inigo, Virginia Sobotta's Nightingale soared sweetly, Jonathan Green, a tall Torquemada, Arithmetic, and Frog, sounded as if he had studied Hughes Cuenod with profit. He was telling. He and Miss Steiger made a case for the original - a language performance, the French of others sounded far back in the mouth, not out on the lips.

All the same, the operas gave one something to listen to and something to think about, if not to admire. It is probably better to be irritated, angered and challenged by a Corsaro than to be bored by a Copley. Better still to encounter a Peter Hall *Salome*, a Peter Sellars *Giulio Cesare*, a David Pountney *Rusalka*, where composer, librettist, and (despite everything) producer seem in performance to work as one.

Andrew Porter

And the audience, reading superlatives rather than listening, laughed at projected jokes before the singers had made them.

Corsaro's additions to *L'Enfant* - the birthday party for the child's little sister, the Papa who takes Maman away from Bebe and then doubles as Tomcat, making lascivious love to Maman/Cat while Bebe watches - added an Oedipal whine to Colette's clear-eyed, wise, and moral libretto - the whine of the child, or grown man, who seeks to transfer blame for his unhappiness and bad behaviour onto those who brought him up. Sendak's imagery, in both operas, is more comic-book than elegant.

All the same, the operas gave one something to listen to and something to think about, if not to admire. It is probably better to be irritated, angered and challenged by a Corsaro than to be bored by a Copley. Better still to encounter a Peter Hall *Salome*, a Peter Sellars *Giulio Cesare*, a David Pountney *Rusalka*, where composer, librettist, and (despite everything) producer seem in performance to work as one.

ARTS GUIDE

OPERA AND BALLET

London

Royal Opera, Covent Garden. A new production by Adolf Dresen of *Fidelio* conducted by Christoph von Dohnanyi. English National Opera. Collinson. *Cost fan tutte*, in John Cox's stylish 1980 production. Further performances of the new double bill - *Delius's Pelleas and Melisande* - conducted by Charles Mackerras.

Ballet. The Royal Ballet presents a new double bill at Covent Garden, also *La Bayadère*.

Paris

Josef Nadi and his Théâtre Jai come with a surrealistic premiere of *Comedia Tempora*. Théâtre de la Ville (47424277). Choreography by Balanchine, music by Stravinsky, Kiyin, by music by Stravinsky, Pacher and Jandek. Opéra de Paris. *Les Femmes de Médée* - conducted by Charles Mackerras.

Brussels. Koninklijke Vlaamse Opera. Royal Vlaamse Opera in *Van Gogh*. *Un Malheur vena de noir* by Jan van Vlijmen, conducted by Reinbert de Leeuw. (09-233 86 86).

Antwerp

De Singel. Monnaie Opera in *Metastasio* by Arrigo Boito (concert version), conducted by Emil

Tchakov. (09-248 38 00).

Amsterdam

Musiktheater. Netherlands Opera in a co-production with the English National Opera of Verdi's *Il Ballo in Maschera*, directed by David Alden. The Netherlands Philharmonie is conducted by Michael Häfner. The National Ballet presents *Sven Loke* choreographed by Van Dantzig and Van Schuyk after Pjeter/Janzen (020 650).

Barcelona

Gran Teatre del Liceu. Uwe Mund conducts Wagner's *Die Walküre*, with a cast led by Montserrat Caballé and Johann Meier. Ends December 17 (412 14 60).

Rome

Teatro Dell'Opera. Season opens in style with a new production of *Tosca* by Mauro Bolognini. Luciano Pavarotti sings Cavaradossi to Renata Kaberova's Tosca, with Inger Wixell taking the part of Scarpia, conducted by Daniel Oren (061.24.26).

Naples

Teatro San Carlo. Season opens with an old favourite, Mascagni's *Cavalleria Rusticana*, with Shirley Verrett, celebrating the centenary of the opera's first performance, teamed with film. *Bohème* by Nicola Orlino to Mascagni's music (7972412).

Milan

Teatro Alla Scala. Riccardo Muti opens the new season conducting

Roberto de Simone's production of Mozart's *Idomeneo*, designed by Mauro Cassol. (72008744).

Venice

Teatro La Fenice. A co-production with the Teatro di Montecarlo of Pier Luigi Pizzi's production of Verdi's *La traviata*, conducted by Roberto Abbado. (051.0151).

Berlin

Opera. *Fidelio* in Jean-Pierre Ponnelle's production. Also *Götterdämmerung*, part of the successful Götz Friedrich Ring cycle and *Prigioni and Boile* returns with Gwyneth Jones and Rene Kollo. Also a Christopher Bruce ballet evening and *Hänsel und Gretel*.

Hamburg

Opera. *Idomeneo*, *Die Hochzeit des Figaro*, *Lehrjahre* and *Die Zauberkraft*.

Cologne

Opera. *La Bohème* has Nora Thomson, Faith Bolam and Fernando de la Mora. *Die Zauberkraft* is a well done repertoire performance. Also *Hänsel und Gretel*.

Bonn

Opera. *Rigoletto* in Graham Vick's wonderful production. Also *Ariadne auf Naxos*.

Frankfurt

Opera. Kurt Wall's *Aufstieg und Fall der Stadt Mahagonny* in Arle Zinger's interesting produc-

tion. *Macbeth*, conducted by Frankfurt's director Gary Bertini has Renata Kaberova as Lady Macbeth. Ghuck's rarely played *Ipheigenie in Tauride* rounds off the week.

Munich

Opera. *Can and Pug* are sung by Grace Bumbury, Gudrun Wenzow and Ermano Mauro. Also *Don Giovanni* and *Der fliegende Holländer*. Further offered *Elisabeth und Grail*.

New York

Metropolitan Opera. John Copley's new production of Rossini's *Semiramide* conducted by James Conlon, who also conducts *Salome* in Nikolaus Lehnhoff's production. Julius Riedel conducts Dine Yanevopolova's production of *Giulio Cesare*. (602 8000).

New York City Ballet. The Nutcracker takes over for its annual appearances. New York State Theatre, Lincoln Center (495 0930).

Chicago

Lyric Opera. Tatiana Troyanos has the title role in *Carmen*. Leo Nucci sings the title role of *Rigoletto* in Sandro Sequi's production conducted by John Fiore. Civic Opera House (323 2244).

Washington

Washington Dance (Terrace Theatre). Local choreographers/dancers in the fifth annual celebration of Washington dance (Thurs). Kennedy Center (457 4500).

SALEROOM

December 7-13

Silver sells well in Monaco

Sotheby's and Christie's were busy trying to make money in Monaco over the weekend, with Sotheby's holding six auctions and Christie's three. They provided a good run down on the current demand for antiques, with silver still doing very well while pictures

fell badly.

Sotheby's sold a pair of silver vases made by Robert-Joseph Auguste in Paris in 1771 for £210,736, (below forecast) in a silver auction which was just a few percent unsold. In contrast Old Masters were 40 per cent bought in, and 19th century pictures, 53 per cent. Highest prices were the £285,889, over twice the estimate, paid for "Jesus washing the feet of the Disciples", by the 16th century Ferrares artist Garofalo, and the £240,000 which secured a watercolour by Gerlicault of Colonel Bro in action in Saint Domingo. In the furniture (29 per cent unsold) a bureau-plat of around 1735 by François Leleu just hit his forecast at £206,993.

Christie's Old Masters were 40 per cent unsold, but a tranquil Dutch scene of windmills by Albert Cuyp sold for £113,265. Among the 20th century furniture two "Totems Cubistes" by Gustave Miklos went within target at £188,367. Christie's was quite pleased with its Chinese sale in London yesterday which brought in just over £1m in the morning session with 38 per cent unsold. Blue and white Ming hold its traditional appeal and

a pear shaped bottle vase of the 15th century, a rare shape for this period, the Xuezi, sold for £150,000 top estimate at £174,000.

Poland's new president

THE THEORY that Poland acquired a special democratic maturity during the ten year struggle of Solidarity against the communist system has taken a severe knock during the course of the presidential election campaign.

In the first round the electorate rejected the prime minister, Mr Tadeusz Mazowiecki, and voted Mr Stanislaw Tyminski, a previously unknown Polish-Canadian businessman with no previous experience of domestic politics into second place. In Sunday's second round nearly half the voters stayed at home. Many of those who gave Mr Lech Walesa his 75 per cent majority did so without enthusiasm and mainly to prevent Mr Tyminski winning by default.

At the very least the elections have shown a disenchantment with the way politics and the economy have developed in Poland since the communist regime was swept away in August last year. The low poll also reduces the strength of Mr Walesa's mandate and will make it more difficult for him to justify the sort of free-wheeling role he originally envisaged for himself.

These are factors which Mr Walesa will have to take into account as he prepares to take over the post held until now by General Wojciech Jaruzelski, the stiff, enigmatic, but in his own way dignified communist general, who imposed martial law in 1981 to save Poland from a feared Soviet invasion and stayed long enough to preside over the re-birth of democracy.

Popular tolerance

Mr Mazowiecki fell from grace largely because he, and the government he led, failed to retain popular tolerance for the sacrifices required if Poland was to transform itself into a functioning market economy. Hoping for a three-year political truce to get reforms under way, the Mazowiecki government and its Solidarity advisers failed to address the resentment over the way that many of the old communist nomenclature appointees retained jobs, influence and the ability to exploit the new freedoms.

On both accounts Mr Walesa was the government's leading critic. He has promised to get Poland moving faster and to remove the last vestiges of the old system by acting as a presidential god, prodding future

governments into action.

It is a vague and populist formula. Something more concrete is required to reassure foreign investors about Poland's long-term stability. The country also needs a steady hand to introduce the prosaic-sounding, but vitally important, new laws and institutions that will pave the way for Poland's entry into the European Community.

Until now that steady hand has been provided by Mr Leszek Balcerowicz, the finance minister, whose IMF-backed stabilisation plan managed to curb hyper-inflation, restore credibility to the zloty and open up foreign trade.

Shaky base
The problem is that these achievements rest on a shaky base. Inflation is rising again and will rise further in the New Year, when Poland, like other Comecon countries, will have to pay world prices for oil. Unemployment is also expected to rise.

Under these circumstances Mr Walesa's main function must be to use the as yet undefined powers and prestige of his new office to help select a competent government dedicated to seeing Poland through the difficult stage of transition.

Such a government would probably have to include Mr Balcerowicz, to ensure western confidence. Mr Walesa would then have to support the painful economic policies that undermined the Solidarity government.

Grudging support would be worse than useless. Mr Walesa was right to complain that the old government did not do enough to wheedle and cajole Poles into accepting that economic dislocation, and an end to old privileges, were unavoidable parts of freeing up the energy and resources of Polish society. Now he has the power and the position to explain these realities and help consolidate opinion behind the future government.

Meanwhile, the west also has an interest in the stability of Poland and other east European countries. Some credit countries have already recognised this by cancelling debt. Keeping markets open for east European exports is another practical way of helping Poland and others in the difficult times ahead.

The limits of confidentiality

THERE can be no mistaking the UK's determination to crack down on money laundering. Yesterday's guidance notes represent the third non-statutory initiative in which the UK has been involved in this area over the past year or so, to say nothing of four statutes which touch on the financial proceeds of crime. And that is not the end of the matter. The guidance notes are shortly to be extended beyond the banking system into insurance and investment, and by the end of the year the EC will produce a directive of its own.

The intentions behind all these measures are to be applauded. Money laundering is a practice which aids particularly obnoxious criminals, such as terrorists and drug-runners, and much can be done with an array of ancient banking systems to hamper if not throttle their activities.

One has to question, however, whether the authorities' zeal is not in danger of becoming excessive. A successful campaign against money laundering depends heavily on the co-operation of the banks, and that in turn raises questions about the role of banks and the limits of banking confidentiality, particularly in countries like the UK where this is not enshrined in statute as a right. English anti-laundering law places an important responsibility on banks to report suspicious money transactions. Indeed banks could expose themselves to charges of complicity if they fail to do so. In addition, the Bank of England has threatened to revoke the licences of banks which fail to install effective monitoring systems and train their staff.

Combined weight

The combined weight of these strictures must push banks into casting a wider net of suspicion than they might otherwise do, if only to be on the safe side. According to the authorities, innocent bank customers have nothing to fear because investigations will quickly establish that their affairs are legitimate. However the police also said yesterday that only one in five of the

reports they customarily receive actually creates a new case or contributes to an existing one.

It is not surprising, therefore, that the UK banking industry was careful to define the limits of confidentiality in the voluntary Code of Practice which it issued last week. These limits specifically exclude cases "when they suspect that a customer is involved in drug trafficking".

Money laundering

The authorities need to supply more evidence that the measures they are introducing is commensurate to the size of the problem. The Bank of England was unable yesterday to provide any statistics to support its contention that money laundering is a serious problem in the UK. The only figure available is that provided earlier this year by the Group of Seven task force on money laundering. They estimated the global figure at \$850 a year, but admitted this was a very rough estimate.

We may naturally assume that London's role as one of the world's largest financial centres must make it a natural channel for a part of this. But it is equally likely that drug runners will prefer to try and launder their funds through less transparent and less well regulated centres. In some of these centres the UK authorities have the ability to influence the quality of regulation and should be seen to do so.

Recent initiatives affecting London should certainly not be reversed. If the City is less conspicuous as a money laundry, the credit must go to effective regulation. But careful balance needs to be struck between the interests of law enforcement and the rights of bank customers, and of the banks themselves which should not be forced into playing the role of policeman. An effective anti-laundering campaign also needs to plug as many loopholes in the banking system as possible. This is why these initiatives need to be applied just as rigorously to smaller offshore centres.

Shortly after the global stock market crash of October 1987, 26-year-old Warwick Fairfax sat in the penthouse suite at Sydney's Regent Hotel, trying to decide whether to go ahead with a \$2.1bn bid for Australia's most influential newspaper group. In the lobby, Lady Mary Fairfax, an assistant manager and sent him up to say she wanted to see her son. Warwick sent him away. Nettled, Lady Mary wrote a note urging the bid be dropped. Warwick threw it into the waste-paper basket.

In a subsequent court case, the humiliated Warwick unintentionally raised a laugh by observing "it was often difficult to have a short conversation with my mother". But his behaviour towards her was the point of no return for a man who believed he had a mission to rescue the family business from the control of relatives he thought incompetent and stupid.

From that day on, Warwick was committed to a bid which shattered the façade of unity in one of Australia's leading families, and squandered his own fortune while enriching his despised relatives. Warwick's target was the John Fairfax group, publishers of a host of important newspapers and magazines, including the Australian Financial Review, The (Melbourne) Age, and The Sydney Morning Herald, the country's oldest daily.

He achieved his goal by paying a price only a fool would have refused. For three years he virtually ignored the group, living mostly in Chicago, and concerning himself with prayer meetings run by a US-based fundamentalist Christian group. He is not even a regular reader of the newspapers he fought so hard to control. Yesterday, at the group's request, he received a call from one of its directors, it appeared that Warwick, the fifth-generation of Fairfaxes to run the Herald, could be the last.

The Fairfaxes did not found the Herald, but they have substantially or wholly owned it since the original John Fairfax, a printer from Warwickshire and a Gough descendant of Lord Fairfax, a parliamentary general in the English civil war, bought a half share in 1841. By 1930, when Warwick's father Sir Warwick Fairfax became chairman, the recipe had transformed the family into wealthy Australian aristocrats. To many Sydney residents they looked like the best grown versions of famous English newspaper families like the Berrys, the Astors and the Rothmans.

The difference was that the Fairfax money was older, and the family pedigree longer. The Fairfaxes had enormous political clout, both at state and federal level; they were pre-eminent in Sydney society and they were also commercial leaders, both as proprietors of a leading business and through directorships of companies such as the AMP Society, Australia's leading insurance and investment group, and the Bank of New South Wales, now known as Westpac Banking Corporation.

Sir Warwick rarely interfered directly in editorial matters, but he expected the Sydney newspapers to support Christianity, the monarchy and property rights. Nobody knows whether Warwick shares his father's views because he did not discuss them with his executives, and has never given an interview.

He grew up a lonely only child, rattling around in Fairwater, his father's Sydney waterfront mansion, with only the daily trip to school by Rolls-Royce to enliven his days. Like his father and grandfather, he went to Balliol College, Oxford, and then worked briefly in the US for Chase Manhattan Bank before going to Harvard to do an MBA. As a young man he was extremely reserved, more interested in religion than business, and somewhat indifferent to the trappings of wealth.

But Warwick nursed a private grievance, and a secret ambition. For he had grown up in an atmosphere of

Receivers have been called in at Australia's Fairfax group. Kevin Brown examines the tortuous events that led to its collapse

Family feud brings down a dynasty

bitterness generated by the sacking of his father as chairman in 1976 in a family coup led by James Fairfax, Sir Warwick's son by an earlier marriage, and John B Fairfax, Warwick's cousin. Ironically, the crucial block of shares which ensured Sir Warwick's defeat was held by James under a trust arrangement through which they would eventually have been inherited by Warwick.

Sir Warwick died in January 1987 while his son was at Harvard. When he came home for the funeral, Warwick did not like what he saw in the business. Stock market takeover activity was at a peak, and Warwick convinced himself that the company which had been taken from his father by the family was now vulnerable to a takeover by outsiders. He was worried about the late Robert Holmes à Court, then one of the most feared corporate raiders in the world. Rupert Murdoch and Kerry Packer, both Australian media owners, were also on his mind.

Adding up the shareholdings Warwick found that the family controlled only 43.6 per cent of Fairfax shares. When James and John refused his urgings to buy a further 15 per cent to ensure control, Warwick did it himself, borrowing \$400m from the Midland Bank for the purpose. Theoretically, the purchase made Fairfax impregnable as long as the family voted together. But Warwick had a problem. Although he was worth about \$900m based on his rights to inherit shares and property, he had no significant income, and was wary of paying the interest on his loan. The only way out was to gain control of Fairfax, and with it the cash flow to pay his debts. Several merchant bankers told Warwick that it could not be done without a powerful joint venture partner, which carried the risk of losing control of the company.

There was one man, however, who thought he saw a way. Laurie Connell was a Perth businessman who had taken over a small Queensland meat-swear company called Rothwells and turned it into an aggressive merchant bank. Connell's strategy was to borrow \$41.3bn to buy out all the non-family shareholders, then repay the debt by selling the Financial Review, a radio network and other assets, and using the proceeds to buy back the company which published The Age. The family shareholders would become minority owners of a company controlled by Warwick. Warwick's contribution was a steady stream of confidential papers from the Fairfax board, which he had been invited to attend as a guest after his father's death.

The bid was sprung on the family late one Sunday night in August 1987, only a few hours before the public announcement. Via Connell, a former editor of the Sydney Morning Herald and author of a forthcoming book on the takeover, says Warwick made no secret of his contempt for James and John. "He thought they were stupid and arrogant and that they were faced with a fait accompli," said Connell.

But the family turned out to have no more taste for Warwick's leader-

ship than he had for theirs. They not only accepted his bid, but forced it up to the point where the costs of the takeover ballooned to \$2.1bn. In the middle of negotiations, the stock market crashed and the Australian All Ordinaries index fell to 1200 in the third week of October 1987, half its level in September.

Warwick could probably have pulled out under the provisions in Australian takeover regulations for bids to lapse in extraordinary circumstances. He decided at the Regent Hotel meeting to press on, believing the crash would help the bid by making small shareholders more keen to sell. He was right, but the crash wiped out most of the funds Connell had done to recover the cost by selling assets to Holmes à Court, Packer and Murdoch, and forced the cancellation of the plan to float The Age.

The takeover had succeeded, but from then on, everything went wrong. Rothwells collapsed and had to be bailed out by, among others, Alan Bond and the Western Australia state government. Senior Sydney Morning Herald journalists walked out in protest at new managers installed by Warwick. National Australia Bank and Westpac brought a court action claiming any funds raised through asset sales should be used to repay existing Fairfax debt.

Warwick decided the advice he had received from Rothwells was not worth the \$100m agreed fee. Alan Bond, to whom Connell had assigned the debt in exchange for immediate cash, brought a court action for payment. In the middle of all this, Robert Maxwell, the UK newspaper proprietor, offered \$350m for The Age, but the offer was dropped by Fairfax after

Paul Keating, the federal treasurer (finance minister) indicated it would not be allowed to go through.

All sorts of potential purchasers were circling the Financial Review, including Pearson, the UK conglomerate which owns the Financial Times. But nobody who was acceptable would pay enough to clear Fairfax's debts. Finally, Citibank agreed to lend \$550m to take out Westpac and National Australia Bank, leaving Fairfax short of about the same amount to balance the books.

The saviour was William Simon, a US merchant banker who had been treasury secretary under presidents Nixon and Ford. He put Warwick in touch with Michael Milken, the junk bond king at Drexel Burnham Lambert who was recently sentenced to 10 years in prison for US securities violations. With the aid of US\$450m in junk bonds, Warwick had sufficient cash to pay for all the shares he had bought. He settled out of court with Alan Bond for about \$37m. James Fairfax walked away with \$150m, John Fairfax and his father Sir Vincent with \$350m.

When Warwick moved in to the Fairfax boardroom in December 1987, the John Fairfax group owed \$1.1bn to ANZ and Citibank, and \$400m to US bondholders. Warwick hoped that revenue would grow so fast under the new management that the debt could be repaid from increasing profits.

For a while the strategy appeared to be working. But as the Australian economy headed into recession this year Fairfax's revenue growth slowed, and the group admitted that it might start breaching its loan covenants by December. The board ordered a series of reports from merchant bankers. They concluded that the company was worth between \$1.1bn and \$1.2bn, implying negative net worth of between \$500m and \$700m. But when the board tried to put together a financing deal involving the reduction of Warwick's equity to a nominal 5 per cent, Warwick sacked the board, appointed a new one, and took over the helm himself.

For the past couple of months he has been talking to US and Australian bankers, seeking the elusive financing which would keep the company afloat and maintain his control. By last Friday it is believed that there were no firm offers on the table. Potential suitors could include Kerry Packer, who would have to sell all or part of his Channel Nine television network to meet cross-ownership regulations; Rupert Murdoch, who would have to sell or close The Australian and his other Australian assets in Melbourne; and Tony O'Reilly, the US-based Irish chairman of Heinz, who might be able to buy through his Australian children.

Other bidders for all or part of the empire might include Hudson Conaway, Pearson, and various US newspapers, although all would need a majority Australian partner. Trevor Sykes, editor of Australian Business magazine and author of a book on the takeover, doubts that the banks will decide to liquidate the company and sell the assets. Yesterday, receivers confirmed their desire to maintain Fairfax as one entity and to continue all its current business activities.

When Warwick launched his bid he was congratulated by Rupert Murdoch, who said he wished he had had the guts to do something like it at 26. Sykes sees Warwick as a victim of destiny, pushed forward by his humiliated father and ambitious mother. "It became his lot to retake the citadel on behalf of his branch of the family," he says. Others, like Max Suich, a former chief editorial executive of Fairfax, take a more critical view. "This is not a tragedy," he says. "It is a story of a greedy kid who made a mistake. 'The Money Man' couldn't walk," by Vic Carroll, William Greenhouse Publications.

Emperor's new clothes

■ Brazil's energetic president Fernando Collor has found a new way to counter criticism of his government's authoritarian policies - through the slogan on the T-shirts he wears for his regular Sunday jog in front of the massed Brazilian media.

The latest slogan was in Latin but left no room for doubt: "Ad Angustia" (the only way out is through sacrifice). It came in response to a week of criticism over the deepening recession.

The previous Sunday's slogan was even less subtle: "The time and the man are right". That followed a week in which the government's leader in Congress resigned, accusing Collor of acting like an emperor.

His point is not just cheaper but more effective than the government's new television advertising campaign against the inflationary culture bred by 10 years of steeping prices.

The first ad was meant to drive home the government's argument that business profit-margins are abusive. It showed a woman shopping for a TV set and being quoted prices for the same model that vary by 100 per cent. In the end, bewildered, she decides to make do without one.

Unfortunately the wrong message seems to have been received. Instead of shopping around and boycotting high-price suppliers, the Brazilian public has evidently concluded that they are being officially warned against buying TV sets at all. The chief of a shopping mall in Sao Paulo, for instance, reports that sales of them have slumped to nothing.

The second ad in the campaign tells viewers not to buy Christmas presents, but give Christmas kisses instead - which, with industrial activity already 8 per cent down below the ad appeared, seems apt to redouble business

people's hostility to the Collor administration. The emperor, they say, is going to need more than new clothes to make his policies succeed.

El Majo

■ John Major has planted the seeds of free enterprise in an unlikely spot. It is Camdeleda, a sleepy hamlet nestled against the granite peaks of the Gredos Sierra in central Spain, where Britain's prime minister has spent the last two summers in the country house of Mariano Gago.

By Mariano Gago, father-in-law of Theresa Carel-Jones, minister of state at the foreign office.

Marcelina Rodriguez, who cooked for "el turista ingles" and his family, is making bread from cheese-baked journalism. For £250 or so, he reveals that Major has a healthy appetite for the local chick-pea stew, and that "although he doesn't speak Spanish he is so intelligent that he understands everything I say".

By Mariano Gago, father-in-law of Theresa Carel-Jones, minister of state at the foreign office.

Reformer goes

■ The French stock exchange is to close a chapter of its history with the resignation of 42-year-old Régis Rousselle, its leader through three years of radical reform.

Having arrived in 1988 in a crisis of predecessor, Xavier Dupont, had to resign after the exchange was found to have squandered FF400m of reserve funds speculating

OBSERVER

on the futures markets. Rousselle feels his task is now complete. He has introduced market-making, capital ratios and a whole new rule book, as well as presiding over the introduction of a new electronic settlement system years ahead of London.

His job is to be split in two. Bruno de Maudslayi, chairman of the Crefid du Nord bank, is widely expected to be elected head of the Conseil des Bourses de Valeurs, the regulatory body. And Rousselle's current deputy, former finance ministry official Jean-François Théodore, will be proposed for the chairmanship of the Société des Bourses Françaises, which actually runs the market.

Cradle to grave

■ St Johnstone, the Perth football club currently lying fourth in the Scottish Premier Division, continues to point the way ahead for its less commercially brethern in the world of soccer.

Last year the Saints became the first British club to have

a purpose-built, all-seater stadium after clanking a novel deal with Asda. The retailing group wanted to develop a superstore at the club's ageing Muirton Park, which occupied prime land in the middle of Perth.

In exchange, Asda built the club a £2.5m stadium on a greenfield site on the outskirts of Glasgow and Edinburgh.

St Johnstone is continuing this entrepreneurial trend with catering facilities at the 10,000-seat stadium: a waterside restaurant offers lunch throughout the week, and four-course dinners for £16.50 on Friday and Saturday. The club's function suites have also been doing growing trade in catering for wedding receptions, christenings and parties of mourners attending the nearby crematorium.

Next exit

■ Meanwhile a reader has sent an addendum to my report on the Curse of Garza, outlining the fate of several who had crossed the path of England's colourful footballer.

It is a list of last year's executive box holders at the Arsenal club, now second in the league south of the Border. It does not make pleasant reading.

The Levitt Group, Parkfield, British & Commonwealth, Bond Corporation and Continental Airlines, are to be found hobnobbing alongside such pillars of the business establishment as Barclays Bank and Enterprise Oil. I hope these wealthy sponsors do not take fright on realising that the list of recent box-holders sounds increasingly like the roll of a corporate graveyard.

Unlikely story

■ Which opera tells what happens when a karate expert meets a Russian girl who can't say no? A-eeee Da.

TODAY 14 YEARS AGO. KNOCKANDO YOU REMEMBER?

Mao Tse-tung's widow and three of her fellow radicals languish in jail. The authorities describe this 'Gang of Four' as 'filthy and contemptible like dogs' dung.

A British drug company announces that it is about to launch a once-a-year contraceptive pill.

On BBC 1 you can watch The Osmonds, followed by the hospital drama Angels and David Dimbleby interviewing Saudi Oil Minister Sheikh Yamani about the latest round of price increases in the Gulf.

At the Knockando distillery, another 'Season of Distillation' begins. The pure, natural spirit is poured into oak casks where it slumbers unloosed until the day it is deemed fit to be bottled, twelve or more years from hence.

Both dates are recorded on the label. The difference between the two is the age of Speyside's most singular, single malt whisky.

THE VINTAGE MALT

LETTERS

Call for Gatt negotiators to consider Third World

From Mr. Cline Robinson.

Sir, If your correspondent's judgment ("GATT talks break up with row over EC farm reform", December 8) that last week's Brussels meeting of the GATT Uruguay Round fell apart largely because of the EC's obstinacy over farm trade reform is correct, the outcome may at least have brought the benefit of a narrow escape for the future of farming in the Third World.

The compromise text on farm trade from Swedish farm minister Mr. Mats Hellström (coily described as a "non-paper" when it appeared on Thursday) was fundamentally flawed.

Like last June's proposal from the EC, it was based on agriculture mediator, Mr. Aart

de Zeeuw, it set out to treat developing country farming in just the same way as the over-productive model of the north. Under his proposal all countries would have to open their markets and cut supports to their farmers, with Third World countries allowed only a looser rein.

The unreported small print of the Hellström plan shows that the poorest developing countries, which can barely afford to subsidise their farmers, would still have been required to cut internal farm supports by at least 15 per cent.

The plan contains no guarantee that Third World countries would keep their right to maintain or introduce taxes or controls on cheap imported

food, as Nigeria has done in cereals, in an effort to reach a more self-reliant basis for their food security.

Finally, the plan did not go far enough in tackling the problem of export dumping of farm products, for which the simple and effective solution is to ban all exporting at less than the costs of production.

There can be no just settlement of the farm trade dispute until negotiators face up to the distinction between the over-productive and trade-distorting export agriculture in the north and the efforts of food-deficit developing countries to achieve food security by offering incentives to their small farmers and lessening their dependence on the

hazards of the world market.

Agriculture is the mainstay of economic activity and employment in developing countries and its protection there, far from distorting trade, is a precondition of their development.

The EC, though acting patently out of self-interest last week, may have brought an unintended blessing to more than the small farmers in the developing world, by giving the negotiators more time to find a solution which preserves their right to feed themselves.

Clive Robinson, *Food Matters Working Group, Liaison Committee of Development NGOs to the EC, c/o P.O. Box 100, London, SW1*

When unpaid debt becomes reason to go to court

From Mr. T. P. St. V. Picton Phillips.

Sir, Charles Batchelor's article ("Greater powers urged for chasing bad debtors", November 13) on a report of the National Federation of Self-Employed and Small Businesses, raises a number of interesting points.

In my experience many small firms are reluctant to take court proceedings to recover outstanding accounts from larger companies because "they are our best customer", or because "they will take their business elsewhere". So it would appear there is a distinct difference between the theoretical desire to make it easier to enforce payment, and the reality.

Let there be no mistake about it: a customer who does not pay on time cannot, by any yardstick, be a "good" customer.

Meeting digital service demand

From Mr. Alan Knight.

Sir, Your article on ISDN (Communications News, December 30) rightly draws attention to the "undeniable demand for a high speed publicly switched digital service".

The UK however, is not as far behind the rest of Europe as your article would imply. British Telecom and our competitor have between us installed more primary rate connections than any other country in the world. BT's basic rate service is in the process of being implemented, with the aim of covering every leading business centre and high street within 18 months.

The pricing example quoted is incorrect: the rental tariff for Germany is per month and not per quarter as implied. Taking this into account, the quarterly charge for basic rate service in the UK is similar to Germany and considerably cheaper than in France.

Alan Knight, *ISDN Programme Manager, British Telecom, 2-12, Gresham Street, London, EC2*

Communications explosion brings demand for new phone numbers

From Mr. David Holmes.

Sir, The need to expand the United Kingdom's telephone numbering capacity (Letters, December 4) arises primarily out of the demand for new numbers caused by the communications explosion.

A host of new services, ranging from mobile telephony to paging, fax, information and entertainment services, plus the expected growth of new operators as competition in the industry is expanded, all require more numbering capacity.

Our major concerns are that any change should be as simple and easy to understand as possible, to minimise inconvenience to customers, and give them plenty of time to plan and prepare and to create the

Role of Yugoslav armed forces

From HRH Crown Prince Alexander of Yugoslavia.

Sir, Laura Silber ("Yugoslav minister threatens intervention by the army", December 4) points to the serious situation regarding our country's transition to democracy.

The principle role of the armed forces is the defence of the integrity of the national territory. Mr. Veljko Kadijevic (defence minister) finds that all persons that are anti-socialist are the enemy within and for this reason Yugoslavia has irreversibly embarked on the proven course of multi-party democracy.

The armed forces in a democracy are politically neutral. The founding of the general party and Mr. Kadijevic's refusal to de-politicise the army shows that the future of

AT & T bid gives a picture of actions of US institutions

From Mr. Leo Herzel.

Sir, The Economist ("Investors wake up to their power", December 3) describes what some institutional investors in the US are saying these days about strong institutional investor interest in improving the governance of US companies.

However, AT & T's disclosure of its \$90 per share offer for NCR illustrates what institutions are doing.

On Monday, the first day of trading after the disclosure of the AT & T offer, more than 50 NCR shares were traded and the price of an NCR share increased by \$24.75 to \$51.25.

Tuesday's New York Times quoted Richard A. Schaffer, editor of the Technologies Computer Newsletter, who was conducting a conference on the personal computer industry who was attending as follows:

"There are fund managers here that own millions of dollars of NCR stock that are just beaming," he said. "It has turned fund managers who looked boring for buying NCR stock into genuine overnight."

It is very hard to see much long-term interest in corporate governance in the US.

When there is a takeover bid, institutional investors' concerns with corporate governance still appear to be easily overwhelmed by the chance of making quick profits. And, when there is a bid pending, institutional investors' participation in corporate governance issues is dominated by opposition to anti-takeover measures.

If there really is an excessive focus on the short term in US industry (as the FT appears to believe), the correction is unlikely to come through institutions, despite the talk.

Leo Herzel, *Mayer, Brown & Platt, 190 South La Salle Street, Chicago, Illinois*

Getting shares to the people

From Mr. G. M. Hinde.

Sir, That underwriters for the electricity privatisation were unnecessary (Letters, December 7) is not the full story. Why not give shares to all taxpayers and raise a sum

equivalent to the disposal receipts through taxes. This would genuinely extend the scope of share ownership.

G. M. Hinde, *47, Queenswood Road, London, SE22 8QR*

No plan for boosting production of gold from the Soviet Union

From Ms. Natalya Zubareva.

Sir, In response to Kenneth Gooding ("Higher Moscow gold sales 'need not cause price fall'", November 30), I would like to comment.

I appeared at the Gold Show as an independent researcher and the views I presented were my personal opinions. However, I would like to clarify several points with respect to the research study conducted by the Soviet Institute for Foreign Economic Relations. It was a broadly-based research study evaluating the role of Soviet gold production in world markets from many different perspectives.

Among the topics I discussed in my talk were our attempts to identify potential geographic shifts in world gold production

as well as our evaluation of our future opportunities to develop a more active domestic and export jewellery industry.

In my presentation, I mentioned that we had analysed the potential market impact of various levels of gold sales, but I want to make clear that I was not discussing any actual plan to boost Soviet gold production. In fact, we do not have such a plan in place today.

Further, I would like to make clear that I am not in any way responsible for current or future Soviet gold sales, a responsibility which falls to the Vnesheconombank.

Natalya Zubareva, *senior researcher, Institute for Foreign Economic Relations, Moscow*

Defence of the hard Ecu raises questions of its working in real world

From Professor Tim Congdon.

Sir, Mr. Paul Richards' defence of the hard Ecu ("More questions and answers on the hard Ecu", December 3) is to state that the new currency would have certain desirable characteristics because that is the way it is defined. In effect, the hard Ecu would be good because Mr. Richards says it would be good. But he has still not explained how it would work as a currency in the real world.

In the final paragraph he asserts that "the exercise of market choice in favour of the hard Ecu would be one of the factors that member governments would take into account" in deciding when to move to a single currency. It is surely implied here that the quantity of hard Ecu would be determined by economic agents' decisions on whether to hold national currencies or the hard Ecu. This would accord with the government's emphasis on the gradual, voluntary and market-based nature of the hard Ecu proposal.

But earlier in the article Mr. Richards expresses concern

that the quantity of hard Ecu must not be allowed to grow too quickly, because that might endanger its anti-inflationary properties. He is therefore quite definite that the European Monetary Fund "would be able to control the size of its balance sheet". It is to do this in two ways, by setting interest rates in hard Ecu and by requiring national central banks to repurchase national currencies from the EMF if economic agents had switched, to an excessive degree, from national currencies into the hard Ecu.

So, at one point in the article, the quantity of hard Ecu is to be determined by the free choice of the peoples of Europe, while at another it is to be determined by the EMF giving orders to national central banks.

What does Mr. Richards really want? Does he want the use of the hard Ecu to be encouraged, hindered, encouraged up to a point, hindered when it is "excessive" or what?

Moreover, he has not answered a key issue raised in my earlier article (November

14) in this area. When he talks about the quantity of the hard Ecu does he mean the quantity of hard Ecu notes (or other liabilities of the EMF) or the quantity of hard Ecu deposit liabilities of the EMF? The split is crucial to the conduct of monetary policy. In some statements (from Mr. Richards, the Treasury and others) the EMF is allowed to issue hard Ecu liabilities only against the backing of national currencies, in order to prevent any addition to the European money stock.

In other statements, however, commercial banks are to be permitted to take hard Ecu deposits. If banks were to have this option, they would certainly want to be free to make loans in hard Ecu as well. But, if they did so, there could be an increase in the European money stock (i.e. of national currencies and hard Ecu combined) and the introduction of the hard Ecu might be inflationary. Again, an answer is needed. Is the hard Ecu to be issued only by the EMF? Or are banks to have the ability to make hard Ecu loans?

These questions are also relevant to the definition of the repurchase obligations. Mr. Richards says that were the EMF to acquire "excessive" holdings of national currencies relative to certain "pre-set limits", the EMF would require national central banks to buy back their currencies.

But how are the "pre-set limits" to be stated? Should they be solely in terms of the EMF's national-currency holdings or should they be somehow recognised hard Ecu deposits in commercial banks, where these also have been created by substitution from national currencies?

It is surely the deposits which would pose the significant inflationary threat, if they became "too large". Most of your readers may have already decided that the hard Ecu scheme is impractical and confused, and one of the strangest ideas ever to have been supported by the British government. They are right.

Tim Congdon, *Lombard Street Research, c/o Gerrard & National, 33 Lombard Street, EC3*

FOREIGN AFFAIRS

A common defence for Europe

Robert Mauthner considers the need for defence arrangements ahead of the EC Rome summit

reductions are implemented.

That leaves a lot of long-term uncertainties. The possible break-up of the Soviet Union, the revival of national and ethnic conflicts in eastern Europe and the unrest which could be provoked by mass east-to-west migrations, could again ignite regional European wars. In such turbulent conditions, the possibility that nuclear weapons might fall into "the wrong hands" and be used indiscriminately, is an even greater hazard.

These are exactly the kind of situations, it is argued, which the Charter of Paris, signed by 34 nations a day after the CFE treaty, is intended to prevent

By 1994, the Soviet Union will have no more troops in its former eastern European satellites. But within Soviet borders, both its conventional and strategic nuclear forces, even after further reductions as the result of arms control negotiations, will remain very substantial.

So far, according to official western estimates, there has been only a small reduction in Soviet production of tanks, submarines and advanced military aircraft, not to mention nuclear weapons. Meanwhile, defence spending was still running until recently at something like 18 to 15 per cent of Gross National Product, on Mr. Mikhail Gorbachev's own admission, with some Soviet economists claiming that this was a gross underestimate.

Since Moscow has also withdrawn a large amount of equipment, due to be destroyed under the Conventional Forces in Europe (CFE) treaty signed in Paris last month, to its own national territory, the precise effect of that treaty on overall Soviet military strength is still unclear.

All that can be said with any certainty is that the prospect of anyone launching a surprise conventional attack in Europe will have been virtually eliminated by the time the CFE

which has to take decisions by consensus, can hardly provide the same level of security for its members as the defence alliances which, some claim, it is designed to replace. At least, not for a long time to come.

The question, therefore, is not so much whether Nato should be allowed to fade away, but how it can best be adapted to take account of the new post-cold war realities in Europe

The question is not so much whether Nato should be allowed to fade away, but how it can best be adapted to take account of the new post-cold war realities in Europe

or deal with. According to the participants, it signals the formal end of the "cold war" and inaugurates "a new era of democracy, peace and unity in Europe". Big words and big intentions; but, for the moment at least, the revamped Conference on Security and Co-operation (CSCE) is no more than the embryo of the new European architecture.

Endowed with a small permanent secretariat, regular but infrequent ministerial meetings, a conflict prevention centre and an "office for free elections", the CSCE is a splendid forum for promoting east-west political consultations, negotiations on arms control and confidence-building measures and, not least, for ensuring the respect of human rights. Yet such a large and diverse organisation, the members of which, until very recently, belonged to adverse military camps, and

specifically western defence arrangements. The Americans, it is clear, will finally attain their objective of making the Europeans assume a bigger burden of the alliance's defence costs, but only at the price of seeing them play a more important role in policy and decision-making.

The creation of a European pillar of the Atlantic alliance, a concept first formulated by President John Kennedy, remained no more than a pipe dream as long as the east-west confrontation required that the most powerful member of the western bloc should also be its undisputed leader. But it has, at last, become a realistic proposition as the result of the new east-west climate.

At a time when, in spite of Britain's lack of enthusiasm, the European Community is laying the foundations of an economic and monetary and

political union, it would be natural and logical for Europe to develop a more cohesive defence identity. Defence, it is true, is not covered by the Treaty of Rome, but neither is foreign policy. It is hardly conceivable that the EC countries should have a common foreign policy while ignoring the security and defence dimension of European co-operation.

The fact that such an enterprise is full of pitfalls does not mean that it should not be tackled at all. The biggest potential stumbling block is the relationship between any European defence entity and the US, which would have to be carefully organised and husbanded if Washington is to maintain its commitment to the defence of Europe.

It is heartening that the latest proposals on the subject, those outlined by Mr. Gianni de Michelis, the Italian foreign minister, a few weeks ago and by West German Chancellor Helmut Kohl and French President Francois Mitterrand in a joint statement last week, fully recognise the need for a step-by-step approach in such a sensitive field.

The nine-nation Western European Union, so long the sleeping beauty of western defence, until it was woken up to co-ordinate Europe's naval contribution to operations in the Gulf, would become the main vehicle for the development of a common European security and defence policy, together with the proposed European political union, under these proposals. Eventually, it could become part of the political union and develop a common security policy on its behalf, but no specific timetable is suggested.

Mr. Willem van Eekelen, the Dutch WEU secretary-general, and a man who prides himself on keeping his feet on the ground, has gone a step further by proposing that the WEU, while maintaining its separate structure, could be put "in its entirety" under the European Council, the six-monthly gathering of EC heads of government.

The advantages of such a project are many. It would not upset present defence arrangements within the Atlantic Alliance. The WEU, with its historical connections to Nato and a largely overlapping membership with both Nato and the EC, is the almost perfect "crossroads" organisation. Above all, it would lay the foundations of a real European defence identity under the overall supervision of an inter-governmental body, the European Council, without opening the Pandora's box of national sovereignty, which so upset Britain on monetary union.

Argentina's horizons are brighter than ever.

Imagine surveying the splendid horizons the people of Argentina see... fertile pampas, snowy Andean mountains, painted deserts, and potent rivers. But Argentinians are also looking beyond the horizon because now, more than ever, Argentina is on the move. Argentina is prepared to resume its place as one of the most vigorous and creative of modern nations.

Argentina is reaching out beyond its borders, integrating itself into the international community, fulfilling commitments, assuming new responsibilities, and establishing solid foundations for growth.

The Argentinians people is more confident than ever and Argentina is once again a reliable partner. Argentina invites you to visit and see for yourself the countless possibilities it offers.

Arianespace: 10 years old

Arianespace, the European satellite launch company, celebrates its tenth anniversary today on an upswing. In less than four months, it has launched a record number of eight commercial satellites, putting well behind it the embarrassing failure of the Ariane rocket's sixth launch last February which destroyed two Japanese commercial satellites. But the festivities will be short-lived. As Paul Betts reports, trade frictions are now running high between the Europeans, the Americans and, increasingly, the Chinese and the Soviets as the \$2bn-a-year commercial satellite launch business.

ABCs of change on the exchange

Later this week, the International Stock Exchange in London will revamp the classification system used since financial deregulation — otherwise known as Big Bang. The alpha designation, mistakenly regarded as a stamp of quality on a listed company's stock, is about to be scrapped. Betts and Gann will also disappear. Richard Waters reports on the changes which will affect many users of the stock market. Page 28

Scottish & Newcastle lifts profits 31%

Scottish & Newcastle Breweries has lifted interim pre-tax profits by 31 per cent. The increase — from £87.4m to £114.5m (£223.4m) — was helped by a substantial reduction in debt charges following the £245m sale of Thistle Hotels to Mount Charlotte. Strong growth at Scottish & Newcastle's holiday operations, Center Parks and Pontin's also helped the figures. "The momentum was maintained through the full six months despite the difficult economic conditions," said Alick Rankin (above), chairman and chief executive. Page 28

Opac looks beyond the Gulf

For the first time in years, almost nothing that Opac does at its meeting in Vienna — which begins today — is likely to have made immediate impact on oil markets. Opac has been sidelined by the crisis in the Gulf. Yet the meeting is an important event as ministers will begin sounding each other out and forming a strategy for what the organisation will do after the crisis. Steven Butler reports. Page 34

Unilever succession

A veteran of 38 years with Unilever yesterday emerged as the most likely successor to Sir Michael Angus as chairman of the UK-based arm of the Anglo-Dutch food and consumer products group. Michael Perry, 56, has been with Unilever since leaving Oxford in 1957, and has headed subsidiaries in Thailand, Argentina and Japan. Page 27

Telefonos de Mexico

Mexico sells Telmex stake for \$1.76bn

By Robert Graham in London and Richard Johns in Mexico City

MEXICO has sold a controlling stake in Telmex, the state telephone company, for \$1.76bn to a consortium including France Telecom and Southwestern Bell of the US. The sale is the largest cash purchase in a developing country privatisation programme. The consortium headed by Mr Carlos Slim Helu, a prominent Mexican businessman, yesterday bought 20 per cent of Telmex, the flagship of Mexico's privatisation plans. France Telecom and Southwestern Bell, in partnership with Mr Helu's diversified Grupo Carso, bid 10 per cent above Friday's Telmex share price on the Mexican stock exchange.

The government of President Carlos Salinas de Gortari plans to reduce its 36 per cent residual stake in Telmex to as little as 6 per cent next year. On yesterday's bid, the Mexican treasury could earn almost \$4.5bn on this privatisation. Next year, the government also plans to sell off 18 commercial banks, a steel company and a television station with the potential to raise a further \$6bn. Mr Helu's diversified Grupo Carso, intends to use these revenues to slash the domestic debt. Mexico, unlike Argentina, is selling blue chip assets for cash. The winning bid beat two other offers in auction after 11 had originally been considered. Mexico's finance ministry said the winning bid was the peso equivalent of \$2.03 per share. The nearest rival was \$1.97 per share from a group led by Mr Roberto Hernandez, head of the brokerage Acciones y Valores, with GTE and Telefonos de Espana. Grupo Carso will be paying out \$850m, Southwestern Bell \$485m and France Telecom \$412m, giving them 51 per cent of the full voting shares. Mr Helu, of Lebanese origin, had long been tipped as the winner of the Telmex contest. He runs a \$1.5bn turnover conglomerate covering mining, manufacturing, paper products, retailing and tobacco. His consortium is committed to investing up to \$10bn in Telmex over five years. The new owners are guaranteed protection from hostile takeover bids until the next century as their controlling stock is off-limits to other investors for 10 years. Telmex last year made profits of \$73m, a 75 per cent increase in real terms over the previous year. This reflected a complete tariff overhaul designed by Mr Aspe to fasten the balance sheet before sale. According to Southwestern Bell, Telmex is roughly one third the size of its own domestic telephone operations in terms of assets, revenues and telephone lines served. Telmex revenues totalled \$2.3bn. France Telecom will delegate its new Mexican operations to a subsidiary, France Cables et Radio.

VW and Skoda unveil DM9.5bn strategy

By Kevin Done in London and Andrew Fisher in Frankfurt

VOLKSWAGEN and Skoda are planning a DM9.5bn (\$6.4bn) investment programme to modernise and expand the Czechoslovak car maker's operations during the next 10 years. VW said yesterday that it expected to take an initial 31 per cent stake next year, which would be increased gradually to 70 per cent by 1995. Volkswagen, headed by Carl Hahn, was chosen on Sunday by the Czech government as the partner for Skoda in preference to a joint bid from Renault of France and Volvo of Sweden. VW, the leading European car maker, yesterday announced an ambitious development programme for Skoda including new assembly, engine and gearbox plants. VW said it planned to increase Skoda's capacity to about 400,000 cars a year by 1997. Skoda is expected to produce about 180,000 cars this year. VW's entry into Czechoslovakia means the group is now committed to ambitious capacity expansion plans during the 1990s in four European countries, as well as in China. In addition to Skoda it is planning: • A DM5bn investment in east Germany in new automotive operations, including the construction of a DM35m, 250,000 cars-a-year assembly plant at Mosel, near Zwickau, and the expansion and modernisation of an engine plant at Chemnitz; • A DM10bn investment in Spain to expand the operations of its Seat subsidiary including a new Pta220bn (\$3.4bn) 340,000 cars-a-year assembly plant at Martorell, near Barcelona. Production is due to begin in 1992; • A second car assembly plant in China, with the aim of building 150,000 cars a year by 1994. This will be a 40/60 joint venture in Changchun, north-east China, with a total investment of DM1.5bn; • To join Ford in a \$2.5-\$3bn (\$1.5bn) development programme in Europe to build a multi-purpose vehicle/people carrier, probably in Portugal. VW said yesterday that the deal with Skoda would strengthen its strategic position in central and eastern Europe. It would also enable VW to take advantage of the growth in the eastern European car market — expected to reach about 3m sales a year (including the Soviet Union) by the year 2000. It said Skoda would be run as an independent part of the VW group and the brand name would be kept alongside the Volkswagen, Audi and Seat marques. The existing Skoda dealer network in Europe would be expanded. It was also intended to export Skoda vehicles to markets outside Europe. VW said there were no plans to build Volkswagen vehicles in Czechoslovakia but additional Skoda models would be developed. The planned Czechoslovak engine plant will have a capacity to produce 500,000 engines a year by 1996, and will become part of VW's international supply network. The German car maker said it would support the development in Czechoslovakia of an internationally-competitive automotive components industry. It was not planning any significant reductions in the existing 30,000-strong Skoda workforce. Analysts were cautious yesterday about the group's growing financial commitments as markets are coming under severe pressure in many international markets. "It's a pretty big roll of the dice," said John Lawson, analyst at Nomura Research. With demand in east Germany surging ahead this year, VW has been hard put to make enough deliveries to satisfy its customers. It says it could have sold 100,000 more cars in Germany with sufficient capacity. The spending planned in Spain, east Germany, Czechoslovakia, and China represents about DM25bn extra investment in the 1990s.

Renault lifts E Europe output

By William Dawkins in Paris

RENAULT, the French car maker, has responded to its defeat by Volkswagen in the bid for Skoda, the Czechoslovak car maker, by accelerating its production and sales efforts across eastern Europe. The state-owned group plans to increase output at plants in Turkey and Yugoslavia and aims to open a third eastern European production base with a local partner next year. Mr Jean-Marc Lepeu, international affairs director, said yesterday. He also revealed that Volvo, the French car maker's Swedish partner, had been in touch with the Czechoslovakian authorities "several months ago" on a possible Franco-Swedish partnership with Tatra and Liaz, two of the country's three largest truck makers. Man of Germany and Iveco, Fiat's truck making subsidiary, are also interested. On Skoda, Mr Lepeu said: "This is not a setback. We will find other ways to conquer the region." The Czech regional government's decision came as a surprise to Renault, which learned of it in the newspapers. It was also a surprise to a Skoda trade union delegation, which had arrived in Paris on Sunday night for talks with Renault's management and the French communist-led CST trade union on how Czech labour conditions might change if Renault took a stake in Skoda. The Skoda delegation's meetings were cancelled yesterday. Mr Lepeu recognised that the fact that Renault was offering Skoda a much smaller investment plan, up to FF15bn (\$3bn) as against DM5bn (\$5.4bn), might have told against it. He denied suggestions that Renault's offer was presented to the Czech authorities as part of a package, also including cheap loans and advice on modernising the country's ageing nuclear power stations. "We do not offer packages," added a representative of the French Industry Ministry. Germany's long business and cultural links with Czechoslovakia were the deciding factor, Mr Lepeu speculated. Renault already makes 50,000 cars a year at Novo Mesto, in the Yugoslav republic of Slovenia, which it is planning to increase to 150,000. Similarly, its plant at Bursa, south of Istanbul, is to increase its output from 100,000 to 150,000 cars annually.

Goodman to give up control as banks agree rescue plan

By Kieran Cooke in Dublin

BANKS owed more than £500m (\$900m) by Goodman International last night agreed to the terms of a rescue package for Ireland's biggest beef processor and exporter. The 33 banks involved are understood to have voted by four to one to accept a proposal put forward by Mr Peter Fitzpatrick, examiner to the troubled company. The plan calls for Mr Larry Goodman, head of the privately-held Goodman group, to relinquish overall control. Mr Fitzpatrick will today take his rescue package to the High Court in Dublin for endorsement. While the banks' approval of a rescue means that Goodman International has cleared one big hurdle, approval by the court is by no means guaranteed. Mr Fitzpatrick said his proposals were in the long-term interest of Goodman International, of "its employees, creditors, suppliers and customers". The company was overwhelmed by heavy debts in August when its investments in Berisford and Unigate, two British food groups, turned sour, and its long-standing trading difficulties with Iraq came to a head. Mr Fitzpatrick's plan includes the sale of various Goodman "non-core" assets, a reorganisation of debt into long-term loans, and payment of an £100m non-performing "rump" debt without interest over a seven-year period. An Iraqi debt of £150m will for the mean time be "parked". It will eventually be paid by Baghdad or by settlement of a court action being undertaken by Goodman against the Iraqi government for cancellation of various state export insurance policies covering trade with Iraq. The banks hope they will eventually receive up to 30p on the pound if Mr Fitzpatrick's plan is successful. Liquidation of Goodman International would have resulted in even larger losses. Last night Mr Goodman issued a statement saying he was pleased that the reorganisation plan had advanced. "I believe the group is well positioned for further development on its markets and products," he said.

Lone Star files for protection under US bankruptcy code

By Martin Dickson in New York

LONE STAR Industries, a large US cement and construction materials company which has been shrinking rapidly over the past few years, yesterday filed for protection under Chapter 11 of the US bankruptcy code. The Connecticut-based company, once the largest US supplier of cement, has sold more than \$800m in assets over the past four years. Much of this was in the form of joint ventures with domestic and foreign cement companies, including Tarmac and B&M of Britain. The proceeds from its unusual strategy were used to help sustain dividends, although payments had to be discontinued at the start of this year. Lone Star, noted yesterday that more than two-thirds of the US cement industry was now owned by foreign companies, said it had decided that shareholders would be better off if it entered Chapter 11. The company said Chapter 11 would allow it to restructure around its core business operations — and continue to sell assets — while also improving its financial structure. It expected to meet its commitments to employees, customers and suppliers. Lone Star, headed for the past 12 years by Mr James Stewart, reported a net loss in the first six months of this year of \$9.3m, compared with a loss of \$9.7m in the same period of 1989, on sales down from \$154.5m to \$113.3m. The company put its cement operations in the southern US into a joint venture with Tarmac in 1986, although the British company bought out Lone Star two years later. The final links between the two businesses ended this year when Lone Star sold some \$147m of preferred stock in the Tarmac America company. In 1987 Lone Star also entered joint ventures in the Pacific Northwest and northern California with, respectively, Onoda Cement of Japan and Britain's B&M. Onoda bought out most of the remaining Northwest stake earlier this year.

GLOBAL EXPERTISE

Fidelity Funds.

The investment range for today's markets.

With heightened volatility in world stockmarkets challenging even the most astute international investor, investment flexibility, choice and first-class fund management expertise are now more important than ever.

That's just what Fidelity Funds offer.

Our global investment range is one of the most comprehensive available and provides investors with unrivalled opportunities for international investment.

With Fidelity Funds you have the choice of where, when and how to invest — around the world — backed by the global investment expertise of the world's largest independent investment management organisation.

Berisford plunges into loss of £880m

By Maggie Urry in London

BERISFORD International, the UK property and commodities group which on Saturday agreed to sell British Sugar for \$880m (\$1.7bn), yesterday revealed a pre-tax loss for its year to end-September of \$96.1m compared with a profit of £107.3m.

After extraordinary debts of \$236.8m against \$99.9m, a transfer from reserves was needed of \$236.8m against \$54.6m. No dividend will be paid for the year.

At the year end, the balance sheet showed net debt of \$282.6m, compared with shareholders' funds of only \$83.3m. A pro-forma balance sheet adjusted for the sale of British Sugar to Associated British Foods and some other moves, shows net debt down to \$246.9m and shareholders' funds recovering to \$256.3m, giving gearing of 69 per cent. On this basis, net asset value was 79p a share.

Mr Murray Stuart, finance director, said the group had the ability to repay all its debt in 1991 from further disposals and retentions, while leaving a business which would have some value for shareholders. Mr John Slater, chairman, said the figures were affected by "very substantial provisions" made against the property, which reflected the weakening of the property market during the year.

Danish bank to buck trend

DEN DANSKE BANK, Denmark's biggest commercial bank, plans to begin issuing securitised mortgage loans to home buyers, financed by fixed interest bonds issued on the stock exchange, the bank said yesterday, writes Hilary Barnes in Copenhagen.

This means that the bank is bucking the trend in Denmark and several other European countries towards giant financial service groups incorporating banking, mortgage credit and insurance under a single holding company.

CS Holding issues warning of reduced net earnings

By William Dullforce in Geneva

CS HOLDING, the parent of Credit Suisse and CS First Boston, the investment banking group, acknowledged yesterday that its net earnings this year would be "considerably lower" than the SF\$85m (\$85m) realised in 1989.

In an interim report covering the period from April 1 to September 30, Mr Rainer Gut, chairman, blamed the "extremely difficult" conditions, compounded by the Gulf crisis, in which the group had had to operate.

High interest rates, inflation-induced increases in costs and the general lethargy afflicting financial markets had served to squeeze profits.

Mr Gut announced no figures for six-month profits or the estimated lower 1990 out-

come. Shearson Lehman Brothers, in a report distributed last week, made a "rough guess" of SF\$348m for CS Holding's net income this year.

Credit Suisse, which provided 90 per cent of the holding company's net income in 1989, would not reproduce last year's record cash flow, Mr Gut wrote. Bank Leu, of which CS Holding took control this year, would report a "markedly weaker performance".

Last month a capital restructuring and trimming of staff of CS First Boston was announced. It included a \$300m injection of share capital, which enabled CS Holding to raise its 44.5 per cent stake to a majority interest of 60 per cent.

First Boston, the New York-based arm of the banking

group, had had to adapt to market conditions and to find a long-term solution to its bridge loan exposure, Mr Gut wrote.

Reductions in staff were largely completed. CS Holding had an exposure of \$470m to the new company which had taken over some \$750m of First Boston's bridge loans and shares in the companies to which the loans had been made. This represented an increase of \$220m on the level of exposure to Seely Corporation which CS Holding had at the end of March.

After the extraordinary write-downs of \$380m already announced, substantial additional reserves were being accumulated with respect to First Boston's remaining bridge loan.

Swedish financier bids for MoDo stake

By Robert Taylor in Stockholm

MR MATTS CARLIGREN, the largest shareholder in MoDo, Sweden's third largest pulp and paper group, has received a bid for his stake from Mr Frederik Lundberg, the Swedish financier, for an estimated SEK1.5bn (\$250m).

At present Mr Carligen owns 39.4 per cent of the voting rights and 20.6 per cent of the equity capital in MoDo, of which he is also chairman. The Lundberg group has 25.1 per cent of the voting rights but 20.2 per cent of the equity capital.

If his bid is accepted Mr Lundberg will achieve undisputed control of the company with 64.5 per cent of the voting rights and 51 per cent of the equity capital. The Lundberg group first acquired shares in MoDo in 1988 when it bought a 15 per cent stake.

However, there could be a complication to the proposed change in ownership. The next largest shareholder in MoDo is Maraberg, the Swedish paper and publishing group, with 18.9 per cent of the company's voting rights and 21.4 per cent of its equity capital.

Maraberg claimed yesterday that it had a "secret agreement" with Svenska Holding, Mr Carligen's group, giving each of them first purchasing rights on the other.

The sale of Mr Carligen's shares would end his family's long association with MoDo which goes back more than 120 years, but it underlines the serious financial problems threatening to engulf him.

Today's troubles at MoDo stem from his ambition of three years ago when he sought to strengthen the company as a significant force in the restructured Swedish pulp and paper industry alongside Stora and SCA through the acquisition of its paperboard affiliate Igesund and Holmen, another Swedish company and Europe's leading newspaper producer.

The net interest burden caused by the acquisition of Igesund stretched MoDo's finances and made the company much more vulnerable than the demand in the paper and pulp industry's cycle occurred this year.

MoDo's profits, before financial items, have tumbled by 29 per cent in the first eight months to SEK774m from SEK1.577m and the company said it did not expect any improvement in the rest of 1990.

Mr Carligen's other business interests covered by the Svenska Holding company include: Stille-Werner, which manufactures and sells health care equipment; the television commercial satellite company Nordic Channel; Storlien hotels; and the aviation company Sukowick. All are causing him difficulties at the moment.

Bourse stops trading in Uddeholm stock

By Robert Taylor

TRADING was stopped yesterday on the Stockholm bourse in the shares of Uddeholm, the Swedish group that is one of the world's leading tooling steel manufacturers.

This followed an announcement that negotiations were under way for the purchase of the company by Vereinigte Stahl, Austria's state-owned steel group, for SEK1.2bn (\$215m).

If agreement is reached the new conglomerate would become the world's largest producer of steel for machine tools, ahead of Germany's Thyssen.

In April this year Uddeholm made a cross-shareholding agreement with Böhler, a subsidiary of the Austrian group which is to be floated on the stock market in 1992.

The strategic alliance between the two steel producers is concentrating on marketing, distribution and product development.

Yesterday Uddeholm said an announcement was expected on the proposed deal by the end of this week.

British media interests pick over Fairfax

Tim Blue and Raymond Snoddy on the possible break-up of the Australian newspaper group

British media organisations are taking a long look at the John Fairfax Group of newspapers in Australia, which has gone into receivership.

Likely candidates for buying at least some parts of the group include Pearson, the publishing, banking and industrial group which publishes the Financial Times, and Mr Robert Maxwell's Mirror Group Newspapers.

Yet despite considerable interest in the Fairfax papers all the signs are that it was the lack of concrete offers that led the bankers to decide on receivership.

Pearson, it is believed, was last week considering the possibility of taking 40 per cent of the group. This would have involved effective managerial control and the possibility of increasing its commitment as the Fairfax debt was paid off.

However, the talks broke down amid suggestions that Canberra would permit no more than a 20 per cent stake. Pearson now is likely to be interested mainly in the Australian Financial Review. Ownership of all or a significant stake in the Review would fit in with the Pearson strategy of acquiring interests in high quality financial publications around the world.

The Review is run at the moment as an integral part of the Sydney Morning Herald. Mr Maxwell by contrast is interested only in the Melbourne Age, although his previous attempts to buy into the Fairfax group were thwarted by the opposition of Mr Paul Keating, the federal treasurer.

Mr Maxwell believes that Mr Warwick Fairfax made a valiant attempt to save the group. If approached it is likely that MGN would be interested in a stake in the Age. Mr Maxwell has recently decided to sell all his television interests in favour of expanding in the newspaper industry.

Lord Rothermere, chairman of Associated Newspapers, is believed not to be interested in Fairfax.

Immediate developments are unlikely and the plight of the John Fairfax Group is not as bad as its erstwhile owner, Mr Fairfax, under Australian corporate law, court-appointed receiver managers are empowered to manage the assets as best they see fit, which can include attempts to trade out of difficulty. This is the clear intention of the banks from their statements and their request for the appointment of receiver managers, Deloitte Rose Tohmatsu, to the John Fairfax group of operating companies.

However, the stand alone finance vehicle - John Fairfax Finance - has been placed in liquidation and will be wound up, with no further role to play. Informed sources say the complex arrangements were those which best suited the long-term interests of the increasingly frustrated bankers. To have liquidated the assets of the newspaper group would have only served to crystallise the banks' losses, and not necessarily improved their chances of recovering funds through asset sales.

For Mr Fairfax, the great

irony is that his company's receivership has come as the culmination of his efforts to safeguard the family jewels from his two great media rivals, Mr Rupert Murdoch and Mr Kerry Packer.

One consolation is that neither of these rivals is well placed to exploit the Fairfax struggles. Mr Packer's Australian Consolidated Press dominates the magazine business in Australia, with titles ranging from the best-selling Australian Woman's Weekly through to the business journal Australian Business. He owns no newspapers.

Mr Murdoch's publications control 70 per cent of the daily metropolitan newspaper circulation, with titles ranging from the Daily Australian Newspaper to the recently merged Sydney Daily Telegraph Mirror.

Financial restructuring plans have been under consideration almost since Mr Fairfax took over three years ago because the levels of debt were widely believed to be unsustainable.

However, Mr Fairfax, who still held 100 per cent of the ordinary voting equity, used his power to dislodge the company's former CSR head Mr Bryan Kelman, former Reserve Bank governor Mr Bob Johnston and the Fairfax chief executive of one week, Mr Chris Anderson.

After the coup, veteran merchant banker Mr Keith Fairfax-Stones and Wardley executive Mr Bill Beerworth were appointed to the Fairfax board. The most likely scenario for the future is a recapitalisation through a share flotation.

Garuzzo to head all of Fiat group

By Niall Simonian in Milan

MR GIORGIO GARUZZO, the managing director of Fiat's truck manufacturing, which is part of the Fiat group, is to be the head of the Fiat group's entire automotive activities in a big management restructuring.

The changes, which reflect the increasing weight of Fiat's core automotive business, will allow Mr Garuzzo to concentrate on wider activities.

They also put the spotlight on Mr Garuzzo, 53, as the most likely successor to Mr Romiti.

Meanwhile, Mr Francesco Paolo Mattioli will take responsibility for all the

group's non-auto businesses. Mr Romiti had taken charge of Fiat's automotive side following the departure in 1988 of Mr Vittorio Ghidella, who was formerly responsible for the auto business.

The new structure is designed to leave Mr Romiti greater freedom to supervise the group's increasingly diverse operations, while putting in a trusted heavyweight manager in-charge of the key automotive side at an increasingly tough time in the market.

Fiat has seen a marked decline in its share of the all-important Italian market this year, and has recently put some 75,000 car workers on

short time in a bid to reduce stocks. Last month, it also announced the temporary lay off of 2,000 employees at its Geotech tractors and earth-moving equipment arm.

Mr Garuzzo, who joined the Fiat group in 1978 after a career in the electronics industry, has seen his star rise sharply this year in line with the expansion of the group's industrial vehicles activities.

After taking responsibility for Fiat's Geotech subsidiary at the beginning of 1990, he has been closely involved in the takeover of Ford's New Holland tractors subsidiary and the purchase of the Enasa trucks group of Spain.

Rift emerges over Enimont top post

SHARP divisions emerged yesterday within the executive committee of ENI, the Italian state energy group, over the nomination to the presidency of Enimont of Mr Giorgio Porta, president of the national chemical industry association and formerly of Montedison, writes John Wyles in Rome.

Now wholly owned by ENI following the recent purchase of Montedison's 40 per cent stake, Enimont obviously remains capable of generating political conflict and

managerial jealousies. Mr Alberto Grotti, vice-president of ENI and a nominee of the Christian Democratic party (DC), yesterday acknowledged Mr Porta's qualifications for the top executive job at Enimont, but regretted that the new president had not been found from within ENI.

Mr Grotti's public unhappiness will be seen as reflecting his party's disapproval at the fact that Mr Porta is close to the Socialist Party of ENI president Mr Gabriele Cagliari.

Italy's governing parties have been battling behind the scenes to place their own people in top Enimont jobs and it seemed that Mr Cagliari himself would take the post until Mr Franco Pica, the DC minister for state shareholdings, recently decreed that it would be against the rules for him to lead both the group and one of its subsidiaries.

The choice of Mr Porta, aged 54, was decided at the weekend during a long meeting of ENI's first member executive committee.

INTERNATIONAL COMPANIES AND FINANCE

US steel group set to emerge from Chapter 11

By Nikki Tait in New York

WHEELING-PITTSBURGH, the US steel maker, is expected to receive clearance to emerge from Chapter 11 bankruptcy proceedings this week, after a series of court hearings on Friday and over the weekend.

Wheeling said yesterday that Judge Warren Bantz had indicated at the weekend that he would sign the confirmation order within the next few days. With a couple of creditors still raising minor objections last week, the judge was waiting to see some of the final paperwork, it said.

Wheeling's re-emergence will mark the end of one of the longest Chapter 11 bankruptcy cases. The company sought protection from its creditors in April 1985, after ambitious attempts to modernise the company left it with hefty debts and continuing losses in the depressed steel markets of the early 1990s.

For several years the company's affairs were marked first

by labour difficulties and by frequent management changes. However, in 1987, Mr William Scharffenberger was brought in by the creditors' committee as chief executive, and proceedings accelerated.

The company has now won backing for a reorganisation plan and also negotiated a new labour agreement with the dominant union, the United Steelworkers of America.

Unsecured creditors will get back about 72 cents on the dollar, while holders of the second mortgage bank claims — which were largely bought by a New York investor, Mr Ron LaBow, and an Australian businessman, Mr David Hains — get up to 68 per cent of the company's equity.

Wheeling-Pittsburgh told the court that — on what it believes are realistic assumptions — it should see profits after tax and interest of about \$32.5m in 1991, rising to about \$45m by 1995.

Ariane seeks new skies to conquer

Paul Betts reports on the future for Europe's satellite launcher

The hot and humid tropical night was filled with expectation and the smell of cigarettes. On the balcony of the European Space Centre in French Guiana, a group of onlookers kept their eyes glued on the horizon.

The sky was suddenly ablaze with fire as the European rocket Ariane lifted off with the roar of 30 Concorde, disappeared behind a storm cloud, reappeared briefly as it shot past Devil's Island, then vanished into the night.

Inside the Jupiter control centre, tension was rapidly replaced by a mood of relief and elation when Mr Yves Guerin, the head of Ariane's 49th mission, announced half an hour later that the rocket had successfully placed into orbit two US commercial telecommunications satellites.

The launch was particularly important for ArianeSpace, the European satellite launch company 56.8 per cent-controlled by French state and private shareholders, because it was the last before the official celebrations in Paris today of ArianeSpace's 10th anniversary.

The party had been postponed for six months after the embarrassing failure of the rocket's 38th launch last February which destroyed two Japanese commercial satellites. The failure was caused by a cloth left in the rocket's cooling system.

Since then, Ariane has launched in the record time of less than four months, eight commercial satellites, including two American ones at the end of last month. The anniversary celebrations, however, are likely to be short-lived.

Although the European rocket again proved its technical reliability as a satellite launcher, trade frictions are running high between the Europeans, the Americans and increasingly the Chinese and the Soviets in the \$20m-a-year commercial satellite launch business.

"The US currently protects its industry by restricting the large government satellite launch market only to US companies such as General Dynamics, McDonnell Douglas and Martin Marietta," says Mr Charles Bigot, the chairman of ArianeSpace.

"The US also favours its domestic companies by making them pay only a very small part of the launch-pad costs for commercial operations at the same time as the government is covering all the costs for military satellite launches," he adds.

ArianeSpace regards itself as a commercial enterprise with French public limited company status. But the US has long argued that the European satellite launch company, whose largest single shareholder remains the French national space research centre CNES, has benefited from as much government subsidy as its American competitors. The French government and state agencies have funded the Guiana space centre and continue to be responsible for the design and development of the rocket programme.

During the past 10 years, Ariane has steadily increased its share of the western world's commercial satellite launch market.

With an order backlog of 34 satellites worth about \$2.9bn, it

now accounts for about 50 per cent of commercial orders in the west.

Although modest by comparison with the overall US or Soviet space programmes, Ariane has given Europe leadership in the commercial space transport business, says Mr Bigot.

The achievement has been more remarkable because ArianeSpace was set up when rockets, or expendable launch vehicles (ELVs) as they are known, were widely believed to have become redundant.

The US threw its lot into the development of the space shuttle. But the Europeans, explains Mr Klaus Isenhardt, head of international affairs at ArianeSpace, considered a manned shuttle too complex a system on which to build a reliable commercial space transport business.

"The founding of ArianeSpace was more than the re-institution of ELVs. It introduced a new concept in dealing with space launching. The idea was that not only could launchers be produced and sold like aircraft, but that a comprehensive launch service had to be offered to the market," he says.

ArianeSpace offers its customers financing facilities, satellite insurance cover, and other services.

The disaster that befell the US shuttle Challenger four years ago and the long interruption in US shuttle flights indicated the European decision to concentrate on rocket technology. It also propelled Ariane into the big league of the commercial space market.

But the troubles of the shuttle led to a change in US space policy. The three US launchers that were once the mainstay of the Reagan administration to compete for commercial satellite launches against Ariane.

The European rocket has increasingly been feeling the heat from the more aggressive commercial approach of its US rivals. But Mr Bigot says competition is distorted because 50 per cent of the business for Ariane's US competitors comes from US government satellites.

Although the US Air Force has shown interest in Ariane and is due to send a delegation to visit the Guiana space facil-

ties soon, it is unlikely that Washington will open the US government satellite market to outside competition.

Another problem for the European satellite launcher is the drop in the value of the US currency, which has given an additional competitive edge to its US rivals. Although ArianeSpace has sought to streamline production cycles and reduce costs during the past year, the decline in the dollar has virtually cancelled out this rationalisation, according to Mr Isenhardt.

Negotiations to establish a set of fair trading rules for satellite launches between the European Space Agency and the Bush administration started in September and resumed this month in Washington. Both sides hope to reach an agreement sometime next year.

The Europeans are also anxious to see any agreement on competition rules include Japan, which is developing its space launch industry, and countries with non-market economies such as the Soviet Union and China, both keen to enter the western launch market.

China has won launch orders for an Australian satellite and an Arab telecommunications satellite by offering extremely low prices.

The ArianeSpace chairman is concerned about the Soviet Union's huge satellite launch capacity. "It makes an agreement on competition rules all the more urgent because only 10 per cent of Soviet rocket production would be sufficient to capture the total worldwide commercial launch market," he warns.

Mr Bigot is also worried that the end of the cold war could encourage western governments to press commercial satellite operators to give some business to the Soviets. He believes it is necessary for the US and Europe to show a common front to negotiate adequate ground rules on this issue with Moscow.

"Although western customers are prepared to pay 10-15 per cent more for a western launcher since going east is more of an adventure, customers could clearly be tempted to take a risk if they could achieve a saving of 50 per cent,

Ariane ready to take off with the noise of 30 Concorde

which is what the Chinese have done," Mr Bigot adds. While campaigning for an international trade pact, ArianeSpace and the ESA are working on the next generation of launch vehicles to replace the current family of Ariane IV rockets with a larger and more powerful rocket, Ariane V, with a payload capacity of about six tonnes. The new rocket will be able to launch simultaneously two large satellites.

"Operators are turning increasingly to heavier satellites and Ariane V will become our workhorse for this new generation of big satellites as well as the launch vehicle for Hermes, the European spaceplane," explains Mr Bigot.

European governments are expected to launch the Ecu4.5bn (\$3.25bn) Hermes programme next year. Four European companies including Aerospaciale and Dassault of France, Deutsche Aerospace and Alenia, the Italian aerospace group, have agreed to set up an industrial consortium to develop the European spaceplane which will act, in Mr Bigot's words, as a "taxi to space" carrying

three astronauts and up to three tonnes of payload.

Britain, with its jammed attitude to large space projects, caused to a large extent by fears of embarking into another costly Concorde adventure, has decided not to participate in Ariane V nor in the Hermes spaceplane programme. Britain, says Mr Bigot, has preferred to concentrate its efforts on satellite payloads rather than in space transport.

But signs are appearing in the UK of a gradual reassessment of the longer-term opportunities space could offer. At the Farnborough air show this year, the UK and the Soviet Union announced plans to study the joint development of a space satellite launch system based on the UK's Hotol (the Horizontal Take-Off and Landing space vehicle).

After Ariane V there is unlikely to be an Ariane VI rocket, says Mr Bigot. Instead, he expects there to be a new integrated system of space transport based on more global collaboration. "But the priority now is to develop and prepare Ariane V as the next stage in space transport," he emphasises.

Northwest wins air routes to Australia

By Nikki Tait

NORTHWEST Airlines, the fourth-largest US carrier, has finally secured access to the Australian market, through a deal with Hawaiian Airlines. Northwest has taken a 25 per cent stake in the lease-making airline immediately, with an option to raise it to 51 per cent.

Northwest has been trying to secure an entry into Australia, but lost to American Airlines in a route allocation about two years ago.

The Hawaiian deal will give Northwest a route authority between Sydney and Honolulu, but the airline said yesterday it hoped to switch this to a Sydney-Los Angeles passage.

Northwest will pay Hawaiian and its parent company, HAIL, \$20m, including \$7m as a secured loan. The two airlines will collaborate on fuel and

parts purchasing, frequent flyer programmes, co-ordinated schedules and marketing.

Northwest will also lease two wide-bodied aircraft to Hawaiian, so that the latter can operate seven flights a week on the Honolulu-Pukooka (Japan) route.

Hawaiian will also transfer its Guam-Seipan and Nagoya-Pukooka routes to Northwest.

Hawaiian, based in Honolulu, flies mainly between the Hawaiian Islands, and has faced tough competition from the larger US carriers in building up traffic to the mainland US. It has also faced severe financial problems, reporting a more-than-tripled loss in the first six months of 1990 at \$43m. Revenue in the period declined to \$160.7m, against nearly \$168m a year earlier.

Fluor net surges 35% to \$147m

By Nikki Tait

FLUOR, one of the world's largest engineering and construction services companies, saw profits surge by 35 per cent in the year to the end of October. The company's results were boosted by sharply higher figures from its core business activities.

It made \$146.9m after tax in the 12-month period, compared with \$108.5m in the same period a year earlier. At the earnings-per-share level, this translates into \$1.51, up 34 per cent on the \$1.36 scored in 1988-89.

The figure is slightly distorted by one-off profits, but

there was a marginally larger non-recurring item in 1988-89, leaving the underlying comparison between the two years virtually unaffected.

In the year just ended, Fluor saw a gain of 10 cents a share from the sale of Pea Ridge Iron Ore Company, while, in the previous year, it benefited to the tune of 11 cents a share from a settlement with National Iranian Oil Company.

The 1989-90 results were skewed on the back of revenues some 19 per cent higher, at \$7.4bn. The company saw a dip in profits during the second quarter of the year, but pulled

back in the subsequent six months. Profits in the final quarter alone were up by 40 per cent on the previous year.

However, Fluor said that Fluor Daniel, the main engineering and construction business, saw the sharpest profits increase. The order book rose by 14 per cent to \$9.6m.

Elsewhere, the group's coal and lead investments showed a small improvement, largely because of a strong advance at A.T. Massey Coal. Operating earnings for Doe Run, Fluor's lead investment, declined due to lower by-product credits.

National Semiconductor improves in second quarter

By Louise Kehoe in San Francisco

NATIONAL Semiconductor, struggling to regain its earnings momentum after two years of heavy losses, recorded a small net profit for its second fiscal quarter, which ended on November 25.

The Silicon Valley chip maker reported net earnings of \$3.5m or 1 cent per share, against \$2.4m last time. Results for the latest quarter include a \$2.4m credit from the reversal of earlier restructuring charges.

In the first quarter of fiscal 1991 National recorded a pre-tax restructuring charge of \$143.6m in connection with the closure of one of its production plants.

Second-quarter sales rose to \$467.4m from \$415.5m in the same quarter last year.

For the first half of fiscal 1991, the company lifted sales to \$870.1m, but suffered a net loss of \$182m or \$1.63 per share. Sales in the first half of

the previous financial year were \$814.4m, and the company recorded a net loss of \$19.5m, or 26 cents.

During the second quarter, National announced it had signed a letter of intent for the sale of its Payalup, Washington, factory to Matsushita Electronics. The company expects to close the transaction in the first quarter of calendar 1991.

"The significant improvement in operating performance in this quarter, compared with that of the first quarter of this fiscal year, reflects the benefits resulting from the restructuring activity which the company undertook this past August," said Mr Charles Spork, National Semiconductor president and chief executive.

The company reduced debt by \$18m to \$221m, while maintaining its cash position, Mr Spork noted.

FSI finance business sold to Investec

By Philip Gwath in Johannesburg

REICHMANS, the South African trade finance company in the FSI group, has been bought by banking group Investec in a deal valued at \$50m (\$20m).

The sale is in line with FSI's aim of consolidating and building its core businesses, the manufacture and distribution of basic consumer and industrial goods. Reichmans becomes part of a larger financial services group.

The deal comes when barriers to South African trade are starting to come down and new markets are opening up. Reichmans' listing will be terminated and shareholders will be offered one Investec redeemable preference share carrying a 13.5 per cent coupon on 140 cents for every Reichmans ordinary share held.

FLACER DOMING

Harold Knutson

The appointment of Harold Knutson to the position of Manager, International Exploration, Flacer Dome Inc., is announced by Euseo Gonzalez-Urrien, Vice-President, Exploration. Mr. Knutson has 33 years' experience in geology and mining engineering. During a career that has included work with the United Nations, the World Bank and world governments, he has evaluated mineral deposits in almost every country of the world. He joins Flacer Dome from the Kaiser Group of Companies of Oakland, California, where he was Chief Geologist with Kaiser Engineers. At Flacer Dome, Mr. Knutson will be responsible for the Corporation's world-wide exploration activities outside North America, except those conducted by Flacer Pacific Limited in Australasia. Flacer Dome Inc. is an international mining company based in Vancouver, Canada.

James Hardie Industries Limited

Incorporated in New South Wales, Australia

Half-yearly report and dividend for the six months ended 30 September 1990

James Hardie is a leading Australian manufacturer in the building products and services sector with operations in New Zealand and the United States of America.

Sales steady at A\$635.7 million in depressed market conditions

Operating profit down 14.4%

Interim dividend of 9 cents declared (equivalent to 8.9 cents last year)

Housing demand down in Australia, New Zealand and the USA by between 20% to 30%

Cost reduction actions expected to achieve future savings in excess of A\$20 million p.a.

Second half profit expected to be in line with the first half

For further information on the Group, please write to the Company Secretary at James Hardie Industries Limited, 65 York Street, Sydney, NSW 2000, Australia

Alexandre Lamfalussy talks to Financial Regulation Report

The November issue of *FT - Financial Regulation Report* reproduces in full the letter — not in general circulation — from Fed Chairman Alan Greenspan to SEC Chairman Richard Breiden on the contentious issue of 'Mark-to-Market' accounting for banks. In an exclusive interview with *FT-FRR*, the General Manager of the BIS, Alexandre Lamfalussy, also gives his view of marking to market, as well as amplifying his analysis of the reasons for the contraction in international credit and the possible consequences for the markets.

FT - Financial Regulation Report is the most comprehensive guide to legislation and regulation affecting the financial services industry worldwide. It is available only on subscription from Financial Times Business Information.

To obtain a free sample copy, please contact Clare Borrett, Marketing Department, Financial Times Business Information, Tower House, Southampton Street, London WC2E 7HA. Tel: +44 71 240 9391. Fax: +44 71 240 7946.

Whitecroft nearly halved to £3.58m

By Andrew Hill

THE SLUMP in the commercial property market has hit Whitecroft, almost halving its interim profits from £7.34m to £3.58m before tax in the six months to September 30.

The lighting division was the only operation to increase operating profits. Earnings per share dropped to 6.77p (14.5p), but the group maintained its interim dividend at 4.8p. Both the textiles and the building products divisions suffered in the worsening economic climate.

Mr Peter Gould, who took over as executive chairman in October, said yesterday he thought the decision to pay the same dividend was a prudent one. "We will be looking at prospects as much as results when we come to recommend a final dividend next year," he added.

Whitecroft sold none of its office or retail developments in the first half and property profits slumped from £2.77m to £614,000 on turnover of just £2.64m (£11.7m). The group

said the housebuilding side - principally "executive homes" in Yorkshire and north-west England - had also weakened but was not having a material adverse effect on the group profits.

The company has also seen borrowings increase in the first half to roughly 75 per cent of shareholders' funds, and the interest charge was more than ten times higher at £1.33m (£112,000).

The increase in borrowings was partly due to rolled up interest from commercial development projects. Whitecroft also made a "long-term strategic decision" to spend more than £7m cash on buying Industria Bohemia, a Netherlands lighting group, in August.

The building products division, particularly the windows and conservatories subsidiary, was hit by the economic downturn, and profits fell from £1.48m to £848,000 on turnover of £21.1m (£18.5m), while the textiles operation made

£217,000 (£1.08m) on sales of £20.2m (£17m). Lighting increased profits to £3.17m (£2.6m) on turnover of £23.2m (£22.1m), including £222,000 of profit from companies acquired during the six-month period. Overall turnover fell slightly at £67.1m (£68.3m).

COMMENT
These results are quite a stiff

test of Whitecroft shareholders' loyalty. The group has been warning them about the deteriorating economic climate since 1988 and the stagnation of the commercial property division was entirely predictable, but the extent of the decline in other divisions surprised some analysts. Questions may also be asked of Whitecroft's traditionally cautious management if the group's full-year dividend is covered less than twice by profits; dividend cover at half-way was 1.4, against 2.1 in the last full year. The shares have already fallen more than 100p since those results in June, and slipped a further 3p to 175p yesterday. If the group manages to sell some of its commercial property in the last three months of the financial year it could make £13.5m before tax; if not, £9m would be a more realistic target. Either way, whether the prospective multiple is 7 or 10, the share-price is high enough for the time being.

Albert Fisher buys Campbell offshoots

By Andrew Bolger

ALBERT FISHER, the subsidiary fresh food distributor and processor, has paid £15.12m cash for three subsidiary businesses of Campbell Soup, the US foods group which is in the process of restructuring.

The British group has bought Campbell's Frozen Vegetables, which is based at Hemel Hempstead.

It will be combined with the existing operations of Frank Idens & Sons to trade as Fisher Frozen Foods.

The enlarged business becomes the biggest in the UK's frozen green vegetable

market, supplying own-label products to the supermarket chains.

Fisher has also bought Morabel and Campbell's Seafood, which together form one of the leading processors and distributors of frozen, warm water prawns and other speciality fish products to the retail sector by the economic markets in the UK, Belgium, Germany, France and Italy.

Morabel is located in Ostend, Belgium, and is responsible for the processing of seafood products and for continental European marketing and sales activities.

Campbell's Seafood is located in Hampton Wick, near London, and handles European procurement and UK marketing and sales.

Combined net tangible assets of the three businesses amount to £15.02m, after deducting borrowings of £3.45m.

The deal was announced in the year to July 29 when £2.1m on turnover of £11.6m.

Mr Tony Miller, executive chairman, said the acquisition was a further important step in developing Fisher's European food processing and distribution operations.

The businesses would significantly strengthen the group's operations in the frozen vegetable and seafood sectors and bring experienced management and strong supplier and customer relationships.

After this deal Fisher is sitting on net cash of £54m.

It has been identified as a possible buyer of parts of Dole Food in the US, the world's largest trader and marketer of fresh fruit and vegetables, or Del Monte Tropical, the Florida-based fruit business which is part of Polly Peck International.

Overseas side lifts Halma to over £6m

By Richard Gourley

FOLLOWING A sharp increase in overseas sales, Halma, the environmental control and safety group, announced a 10 per cent advance to £6.2m in pre-tax profits for the six months to end-September.

Although turnover in the UK was flat, overseas sales rose by 25 per cent and accounted for 41 per cent of the group total, which rose 10 per cent to £38.8m.

Halma has 29 operating subsidiaries in areas that include the manufacture of safety equipment for industrial plant and environment control equipment, security and office technology. It is widely viewed as a "green" stock and has tended to trade at a hefty earnings multiple.

Halma closed two companies, A&G Security Electronics, which made control panels, and Post Glove Medical, which produced hospital monitoring equipment.

Profitable parts of these businesses have been transferred to other parts of the group. The cost of closing and selling the remainder is £200,000 which will be taken as an extraordinary item.

In spite of two cash acquisitions amounting to £2.5m in the first quarter, Halma had no net debt and cash flow remained positive, Mr David Barber, chairman said.

Earnings per share rose 7.4 per cent and the interim dividend is raised by 30 per cent to 0.82p.

While difficult economic conditions were likely to remain in the UK, Mr Barber said the group's wide spread of interests and its strength in specialist markets meant it would continue to progress.

Michael Perry: career weighted towards international positions

Michael Perry in line for Unilever chairmanship

By Clay Harris, Consumer Industries Editor

MR MICHAEL Perry emerged yesterday as the likely successor to Sir Michael Angus as chairman of Unilever, the UK-based arm of the Anglo-Dutch food and consumer products group.

Mr Perry, aged 55 and a 33-year veteran of Unilever, has been personal products co-ordinator since 1987. One of his main achievements was the integration of the Elizabeth Arden Fabergé and Calvin Klein cosmetics and fragrances businesses.

He is to be appointed in May to the special committee, the global group's three-member chief executive. Mr Perry also becomes a vice-chairman. The succession to Sir Michael, who retires in 1992, is expected to be announced next December.

The special committee comprises the group's joint chairman, Sir Michael and Mr Floss

Majers, his Dutch counterpart at Unilever NV, and one other member, often the heir apparent to one of the other two.

Even in Unilever's cosmopolitan climate, Mr Perry's career since he joined from Oxford in 1957, has been heavily weighted towards international positions.

He headed subsidiaries in Thailand, Argentina and Japan before joining UAC International, which oversees many of the group's African operations from London.

Mr Perry replaces Mr Ronald Archer, a member of the special committee since 1989 who retires in May. Mr Antony Burgmans, head of PT Unilever Indonesia, will be nominated as a director in May.

Sir Michael, aged 60, has been chairman since 1988 and a member of the special committee since 1984.

Airsprung bucks trend with 49% advance

By Clay Harris, Consumer Industries Editor

AIRSPRUNG Furniture Group, owner of Britain's second largest bed manufacturer, defied the travails of the furniture sector to record a 49 per cent increase to £1.55m in pre-tax profits for the six months to September 30.

The advance from £1,035,000 was achieved on turnover ahead 34 per cent to £25.6m (£19.1m). With earnings per share up by 69 per cent to 7.89p (4.67p), the interim dividend is raised by 15 per cent to 2.63p (2.32p).

Airsprung, which also makes upholstered furniture and pine cabinets, benefited because it had done no business with Lowndes Queensway, the retailer which collapsed in August.

"I closed Queensway's account six years ago," Mr Michael Coppel, chief executive, said yesterday. In addition to escaping direct exposure, Airsprung was also helped when customers abandoned Queensway for its own retail customers.

In October, Airsprung issued £2m of unsecured loan stock to £1, which also owns 10 per cent of its ordinary shares. Mr Coppel said this replaced short-term borrowings with committed funds on which repayments will not begin until 1994.

The loan stock will also provide the capital for Airsprung's medium-term expansion plans, Mr Coppel said. An equity issue had been ruled out, in part because members of the controlling Yates family had been unwilling to see their 52.6 per cent shareholding in the USM-quoted company diluted.

NEWS DIGEST

Acquisitions depress Cronite

AS FORECAST in October Cronite Group reported lower pre-tax profits for the year to end-September. On turnover lower at £48.71m against £56.01m, profits fell from £3.51m to £1.22m.

The company blamed lower sales by Cronite Allora and Jones at Walsley and RBC Power, which had been acquired for a nominal sum a year ago. Metal stockholding (trading profits fell to £627,000 (£1.56m) but manufacturing was higher at £1.7m (£1.37m).

Earnings per share came out at 7p (11.2p). The directors are proposing an unchanged final dividend of 2.5p for a maintained total of 4p.

Creighton's

Record levels of output helped Creighton's Naturally, the USM-quoted maker of cosmet-

ics and toiletries, increase taxable profits from £117,000 to £202,000 in the six months to September 30.

Turnover rose nearly 45 per cent to £35.7m (£24.5m), and after tax of £176,000 (£41,000), earnings per share went from 1.7p to 2.1p. The interim dividend is raised to 1.8p (1.6p).

DBS Management

The DBS Management Group, a network of financial businesses, whose shares are traded on a matched bargain basis, dominated turnover and pre-tax profits in the half-year to September 30. Turnover advanced to £1.06m (£520,000) and profit to £429,000 (£210,000). Earnings per share were 10.4p (5.8p).

RHM

Mr Stanley Metcalfe, chairman of Ranks Hovis McDougall, was paid £306,000 in the year to September 1, according to the food group's 1989-90 accounts.

Mr Metcalfe, who was appointed chairman on September 10 1989, made £289,000

as managing director and deputy chairman in the previous financial year. Sir Peter Reynolds, the former chairman, saw his salary fall from £142,000 to £96,000 in his new role of deputy chairman.

RHM reduced its contribution to the Conservative Party from £20,000 to £20,000.

Umeco

Fluid Transfer, the aircraft refuelling subsidiary of Umeco, has produced "outstandingly good results" to help the group achieve a super performance in pre-tax profits in the six months to September 30.

The taxable result of this USM-quoted group, which also distributes seals and mauls and other components for the aerospace industry, rose from £279,000 to £411,000 "in difficult trading conditions".

Turnover was up at £7.7m (£5.17m). Trading profit was £407,000 (£228,000) but earnings per share static at 4.9p, as a result of a higher tax charge.

The interim dividend is raised to 1.65p (1.57p).

ated when the full results are known. In 1989 the company paid 0.1p from pre-tax profit of £130,000.

Regina Health

Regina Health & Beauty Products reported a pre-tax loss of £4.7m for the year to June 30 against profits of £764,000. But the directors believe the USM-quoted supplier of Royal Jelly should return to profits by the end of the present year.

The introduction of new management and a rebranding after the year-end had led to overheads being cut by 30 per cent, the company said.

Mr David Tett, the new chairman, described the past year as traumatic.

The pre-tax figure was struck after exceptional restructuring costs of £3.77m and increased interest of £285,000 (£1,000). There was a trading loss of £641,000 (profit £755,000) on turnover of £5.7m (£5.8m).

Losses per share came out at 19.7p (earnings 2.31p).

Chartwell

Chartwell Group, a maker of carpet tiles and laminated products, lifted pre-tax profit from £511,000 to £564,000 in the half-year to September 30.

The company is seeking to move from the third market to the USM via an introduction and expects dealings to start on December 12.

Turnover more than doubled from £4.03m to £23.24m and operating profits from £494,000 to £679,000. Earnings per share were 5.5p (8.5p) after tax of £197,000 (£151,000).

Wellman

The acquisition of Cadogan Numerical Control enabled Wellman to raise pre-tax profits by 30 per cent from £200,000 to £271,000, in the six months to September 30.

Trading profit of the traditional business - industrial furnaces and ovens - was static at £700,000, but stemmed from turnover 4 per cent lower. Cadogan, a precision aerospace engineer purchased a year ago, made £400,000. Overall turnover rose to £15.13m (£14.21m). Earnings were 2.3p (1.9p) and the interim dividend is raised to 0.9p (0.75p).

Crown Eyeglass

In spite of a first half setback, Crown Eyeglass, the USM-quoted distributor of ready-made spectacles, is forecasting record results for the year ending March 31 1991.

Following the initial surge subsequent to legislation in April 1989, sales settled down and caused turnover to fall from £2.15m to £1.69m in the six months ended September 30. Pre-tax profit dropped from £174,000 to £78,000.

However, excluding income from new distributorships, the operating profit, before interest, on core business rose by 25 per cent.

Fobel Intl

Fobel International continued to progress towards a return to profitability and has good order books, directors reported in their interim statement.

In the first half of 1990, the group, a manufacturer of electrical and DIY goods, plastic moulding and dairy machinery, cut its loss from £292,000 to £278,000, on turnover down to £9m (£10.1m). Loss per share was 3.25p (4.04p).

Why are so many people unwilling to take part in voluntary work? Page 3

Trustees are moving assets from cash into equities: Page 4

The voluntary sector is still awaiting the promised legislation, which it believes will strengthen the

public's confidence in charities and lead to increased donations.

Meanwhile, says Alan Pike, the sector is feeling the impact of high interest rates on individual donors.

From grants to contracts

FEW SECTORS of the economy have ended the Thatcher era crying out for more government regulation. Britain's charities are an exception.

There was widespread disappointment within the voluntary sector that new legislation to control charities, which the government has promised to introduce during the current parliament, was not included in the Queen's Speech last month.

Charities need more money, but a combination of tax incentives, government exhortations to the public to be more generous and increasingly imaginative fund-raising campaigns are not producing enough of it.

Voluntary-sector leaders believe that the promised legislation to tighten up the administration of charities and control abuses would increase public confidence and, consequently, income.

The legislation will be based on the findings of the 1987 Woodfield Report, which proposed arming the Charity Commission with a range of stronger powers, to ensure that charities were run efficiently and honestly.

When a charities bill is eventually placed before parliament,

it is likely to propose the widening of the commission's powers over charity trustees; and the authorisation of the commission to appoint receivers and managers, transfer a failing organisation's assets to another charity, freeze bank accounts and suspend trustees and employees where mismanagement or dishonesty is suspected.

There is no proof that fraud is any more of a problem in charities than in the commercial sector. Voluntary-sector leaders believe, however, that people would be more willing to donate money if they knew that abuses that did occur were vigorously pursued. They also believe that the publicity generated by debates on the improved regulation of charities when the bill was before parliament would have a beneficial effect on public opinion.

Many of the Woodfield recommendations which do not require legislation are already being implemented by the commission. At the centre of these developments is the transfer of the commission's central register of charities to a computer database, which began operation this autumn.

The use of computerised records will enable the com-

mission to keep up-to-date information on all charities for the first time. Charities will be expected to confirm or amend their register entries by making annual returns to the commission.

Only time will tell whether there will prove to be a link between stricter legal regulation of charities and public generosity. Meanwhile, the voluntary sector has been hit badly by the impact of rising interest rates on individual donors. The Charities Aid Foundation's annual household survey last month showed that average monthly individual donations in 1989-90 were £1.28 - a sharp drop from £1.97 per month the previous year.

This decline has taken place in spite of the introduction in 1987-88 of the government's Payroll Giving Scheme, which was intended to make charitable donations more long-term and regular by offering tax incentives. By 1989-90 more than 150,000 employees were contributing a total of £7.2m through the scheme, but its growth has been considerably slower than both the government and charities had hoped.

Evidence from companies with successful schemes sug-

gests that it is not enough for employers simply to introduce payroll giving and hope that it will take off. This is likely to do little more than encourage employees who already donate regularly to charity to move to a more tax-efficient method. Attraction of a high level of new donors appears to depend on strong and regular promotion within the workplace.

The government's Gift Aid Scheme, which offers tax relief

of the Charities Aid Foundation, believes people are becoming resistant to the financing of charities to take over welfare work from the state. The foundation's annual household survey showed that 90 per cent of people believed it was the government's responsibility to take care of those in need, with 88 per cent saying that the government should help more, rather than relying on charities to raise money.

Some local authorities are already preparing to base future financial support for voluntary organisations on contracts, rather than grants, and it is an approach which is likely to continue through many fields of service provision

on single gifts to charity in excess of £500, has got off to a more promising start since its introduction on October 1. In its first month, it earned charities nearly £2m, including the value of tax relief.

Part of the decline in charitable donations results from many households feeling the pinch of inflation and high interest rates. But are there more political explanations as well?

Mr Michael Brophy, director

of the government, however, is determined to see charities more involved in welfare activities, and is shifting the emphasis of public financial support to the voluntary sector from grants to contracts. A particularly strong illustration of this is contained in the proposed reform of the care of the elderly and handicapped in the community. Local authorities will be responsible for co-ordinating and regulating care: voluntary organisations and pri-

vate companies will play an enlarged part in providing it. The move to contract funding will be one of the most significant issues facing the voluntary sector during the 1990s. Some local authorities are already preparing to base future financial support for voluntary organisations on contracts, rather than grants, and it is an approach which is likely to continue through many fields of service provision.

Some large charities will grow larger - perhaps much larger - as a result of contract funding. A local authority might, for example, decide to withdraw completely from providing home help and give all the work to voluntary organisations.

But although contract funding may lead to the appearance of much bigger charities than currently exist in Britain, some charity directors fear potential disadvantages.

Are big, businesslike charities likely to be any more efficient and responsive to individual needs than the big public authorities they replace? Would voluntary workers continue to give their time, and donors their money, to businesslike charities that compete

with each other and with commercial organisations for contracts? Might the innovative, experimental work of charities be abandoned in favour of guaranteed revenue from contracts?

Most sensitive of all, would the advocacy role of charities be put at risk by financial dependence on the government, local and health authorities? Staff of child-protection charities, for example, are not always in agreement with local authorities about the best interests of a child. Would this independent, alternative view survive if the charity knew that its contract with the local authority was about to come up for renewal?

It is clear that the shape of at least some charities and voluntary organisations will change considerably during the 1990s. An informal group of senior figures in the sector has, over the past year, been considering how it should respond to some of the most significant developments - including the move to contract funding, the need to diversify and enlarge sources of funds and to find means of attracting and rewarding the quality of staff necessary to run increasingly

large and complex organisations.

One idea produced by the group is that some non-profit-making organisations might benefit from setting up profit-making subsidiaries. As well as enabling staff to share in the fortunes of the for-profit subsidiary - helping to overcome the recruitment and retention problems of voluntary organisations, which cannot pay competitive commercial rates for staff - the group suggests that the idea could have other advantages. It might offer better leverage from other funders, make organisations more market-oriented and reduce an organisation's dependence on over-narrow sources of funds.

Mr David Grayson, a former enterprise agency director now working for Business in the Community, who is one of the promoters of the idea, says: "The 1980s saw the development of the Business Expansion Scheme and similar innovative forms of finance for the corporate sector. In the 1990s, if the non-profit-making sector is going to fulfil the new responsibilities which are before it, equally imaginative new forms of funding are going to have to be developed."

In today's environment sound investment management is as vital as fund raising.

Our dedicated Charities Investment team has been specially assembled to provide conservative yet active management to help ensure that you have the capital needed to continue your good work.

Whether you represent a church fund or an international organisation we can tailor the ideal portfolio to meet your specific investment needs.

Our top down approach and our concentration on asset-based investments are designed to help our clients to enjoy increasing income year after year.

And we all know that it is growing income that will allow you to solve tomorrow's problems.

To find out how we can help, simply telephone John Dale on 071 956 7184.

Your efforts won't be wasted.

The only trip to the theatre some children will make this Christmas.

Photography by Don McCullin

In an ideal world, every child at Great Ormond Street would be well enough to go home for Christmas.

We'd never have to perform an emergency operation. Our intensive care ward would be empty.

In reality, our work continues 24 hours a day, 365 days a year.

70,000 children pass through our out-patients department annually, and another 9,000 need beds.

As you can imagine, the specialised knowledge and dedication needed to nurse them are enormous.

Unfortunately, so are the costs.

Each year, we have to ask the public for a staggering £10 million.

This year, we need even more.

Tragically, the Gulf Crisis has meant children from the Middle East can no longer get to Great Ormond Street for treatment.

So we've lost £1 million of private income that used to help all our young patients.

To help us make up this shortfall, please telephone us on 071 831 1199 or send a donation to: Ann Gillespie, Great Ormond Street Children's Hospital Fund, 49 Great Ormond Street, London WC1N 3HZ.

No one will be more grateful for a Christmas present. Help Great Ormond Street.

Alan Pike on the need for volunteers — and a company that has won an award for encouraging voluntary work among its employees

A niche for older people

THE MULTI-million pound, big-business image of leading charities can divert attention from one of their most precious resources — volunteers.

Voluntary action. Volunteering. The active citizen. Many terms are employed to describe the activities of volunteers, including some less flattering ones like do-gooding, meddling or meddling.

The Volunteer Centre UK, an organisation funded by the Home Office and sponsors to promote volunteering, adopts an American Red Cross definition in a new guide published last week: "Volunteers are individuals who reach out beyond the confines of paid employment and normal responsibilities to contribute time, in the belief that their activity is beneficial to others as well as satisfying to themselves."

This definition would seem unrecognisably formal to large numbers of people who do not describe themselves as volunteers at all. They would say that they simply devote a bit of

time to giving someone a hand in a largely informal way. The more official-sounding definition does, however, acknowledge a point that is seen as increasingly crucial in the drive to recruit more people to community service — voluntary activity must be organised in a way which satisfies the volunteers. We do not live in an age where many people are likely to give their time in order to undertake unrewarding, badly-managed activities.

Last week brought United Nations Volunteering Day, and many organisations will have used it to promote the concept of voluntary activity. In the UK, there is evidence that individuals became less inclined to give their time to voluntary activity during the 1980s.

The 1989-90 charity household survey, carried out for the Charities Aid Foundation by Manchester University, showed that only 25 per cent of those interviewed had given their time to any voluntary activity during the previous month. This was a marginal decline on the previous year, and the average time devoted to voluntary activities by the active 25 per cent was less than five hours per month.

A survey conducted by Mori for the Volunteer Centre UK, earlier this year found, that 25

per cent of the adult population had taken part in some form of voluntary work during the previous year, but this compared with 44 per cent in 1981.

The Mori survey showed that middle-aged people from higher socio-economic groups were the most likely to volunteer, and that volunteering was more prevalent in the south than the north. Charity fund-raising is the most common type of vol-

untary activity, followed by looking after the elderly.

Why are so many people apparently unwilling to take part in voluntary activities? Lack of time, suspicion of possible exploitation of volunteers and fear of becoming over-involved were frequent reasons given to Volunteer Centre UK researchers during a survey conducted earlier this year.

But another, far more basic, reason frequently appeared on the list — many people said

they had not volunteered because no one had ever asked them to do so.

A drive is now under way to overcome some of the perceived obstacles to volunteering, and to find ways of encouraging more people — and a wider range of people — to take part.

United Nations Volunteering Day was used by the Volunteer Centre UK to launch a campaign aimed at encouraging elderly people to give up some spare time to socially worthwhile activities. During the past 18 months, a 50+ group of charities and other organisations has been looking at ways of making voluntary activity more attractive to those aged 50 and over.

Voluntary activity and community involvement, says the group, can offer older people an enhanced sense of self-esteem, and employers, pension managers and those responsible for running pre-retirement courses should all be aware of its potential.

More than 40 per cent of the population is over the age of 50, and by 1995 this will have risen to more than half. With many people retiring earlier, and elderly people remaining fit and active longer, there is a considerable supply of potential volunteers available.

Regaining at home: Ways to increase the levels of household giving was the theme of the recent Charities Aid Foundation conference. Exchanging ideas with delegates are: the foundation's director, Michael Dwyer (extreme right), and its new chairman, Sir John Reed (centre right)

But charities, hospitals, social service departments and other organisations require volunteers of all ages and skills; and, with the apparent decline in individual volunteering, increasing attention is being given to stimulating "mass volunteering" through schemes run by employers.

Earlier this year, the Prince of Wales, president of Business in the Community, launched a drive to stimulate employee volunteering sponsored by Whitbread, which is itself currently developing a scheme to encourage its employees to become more involved in such activities.

Employee volunteering could be judged a success, commented the Prince, when it had become "normal practice for every enlightened employer in

the land". By this standard, it has a long way to go. Employee volunteering schemes, while common in the US, remain unusual in British companies, but there is evidence that more are adding volunteering schemes to their community activities.

Surveys suggest that employees are more likely to take part in voluntary activities if they can do so with colleagues on schemes supported by their employers. One of the attractions to charities of employee schemes is the opportunity they provide for recruiting large groups of volunteers. Another is the prospect of gaining access to particular skills — the services of an accountant, for instance, which a small voluntary organisation might not normally be able to afford.

Employee volunteering schemes offer advantages to the volunteers and their employers as well. They can enhance a company's reputation in its local community, and increase the skills and experience of employees.

Demographic changes are increasing competition in the labour market, and employers are intensifying efforts to persuade more women to return to work. The ability of many women to work depends on the availability of a range of services — from pre-school playgroups to meals-on-wheels — which are provided by voluntary organisations. It is therefore straightforward business sense, some employers believe, to encourage their employees to become voluntary workers and keep these services running.

Allied Dunbar employees renovating a clutter garden, at a Swindon community centre

Extramural builders

ALLIED Dunbar Assurance was last month awarded the trophy for being the UK company that has done most during 1980 to encourage employee volunteering.

The element of surprise would have been at least as great if Allied Dunbar had not won. Since its foundation in the early 1970s, the company has become famous throughout the UK business community for the depth of its involvement in community activities.

The employee volunteering activities which won Allied Dunbar the trophy, awarded by a panel of judges headed by Lord Whitelaw, included:

■ A staff charity fund, which raises more than £150,000 a year in donations from employees at the company's Swindon head office.

■ Volunteers at Work — a volunteering scheme involving 30 per cent of the workforce in community activities.

■ Alpha — Allied Professional Help and Advice — under which the company's specialist staff offer their skills to community organisations, giving advice on computer systems, financial planning, management, training and publications.

■ The Allied Dunbar Challenge, which this year saw staff giving 9,000 hours of time to help 45 charities, hospitals and other organisations in a single day.

The example for this range of activities by employees is set by the Allied Dunbar management. Since the company's foundation, it has donated 1 per cent of pre-tax profits to charity, making it one of the first British companies to do so. Community affairs issues are regarded as mainstream business matters by the senior management, and employees receive company encouragement for their community activities — staff on typical Alpha schemes can expect to get paid time off for half the hours devoted to projects.

Mr Jerry Marston, deputy manager of Allied Dunbar's community affairs department, identifies many mutual advantages for the company and its employees in its outward-going approach to voluntary activity.

"It encourages team-building among employees. Staff develop new skills and increase their sense of identifi-

cation with the company. We are in a highly competitive local labour market at Swindon, and there is evidence that our positive community image helps us to recruit and retain staff."

"I believe people are becoming more concerned about the social image of their employer not just in terms of whether the product pollutes the environment, but over the company's attitude to things like community involvement and child care."

Mr Marston believes that a successful corporate community involvement policy must be professionally led. It is, he stresses, a specialist area like any other activity, and cannot be handled as an afterthought by the personnel or finance department.

Allied Dunbar has nine staff in its full-time community affairs department. This means that charitable activities can be professionally managed and promoted — one result of this is that 70 per cent of the company's employees make regular contributions to charity through the payroll giving scheme.

Another requirement, he says, is the strong and genuine support of senior management. "We have people from the boardroom out doing clinics alongside other employees on community projects. Community involvement is a great leveller. We are a one-level company, and it fits in with our egalitarian approach."

Allied Dunbar invites specialists from outside organisations to serve as advisers when deciding on charitable donations. Projects currently being supported by the company include mental health, caring for carers, debt counselling, disability in the Third World, and the effective management of voluntary organisations.

Mr Marston believes that the professional management of a company's community activities is at the heart of a successful community involvement policy. He emphasises the need for companies to develop long-term commitments with organisations they support, offering follow-up help and advice.

"The benefits of continuing involvement with a cause greatly outweighs the value of just sending off a cheque."

One in three people get cancer.

One in five die of it.

One in a hundred leave money to Cancer Research.

The Cancer Research Campaign is entirely dependent on voluntary contributions.

(Of every £1 we receive, 92p goes directly into research.)

And as a charity, we get the money left to us in wills free of tax.

So you can be sure that every penny you leave us is put to good use.

All too often, however, people don't get round to making a will at all.

(In such cases the law takes over. Your money and possessions do not necessarily go to the people you intended, and of course nothing goes to the Cancer Research Campaign or indeed any other charity.)

That's why we've produced a booklet explaining how to make a will. For a free copy, just fill in the coupon opposite.

Last year we helped to cure 90,000 people of cancer.

Every year we fund one third of the

research into cancer in the UK. And every year we make real progress in its prevention, detection and treatment.

With more funds we could make even more progress.

So please give us a mention in your will.

And help us to help the next generation in the fight against cancer.

Please send me a free copy of the Cancer Research Campaign leaflet on how to make my will.

Investment: difficult times call for a professional approach

Trustees take to equities

After a decade when investment conditions were generally buoyant, in spite of the stockmarket collapse of October 1987, 1990 has proved to be a tough year for investment managers. And this is certain to be reflected in the investment returns of funds held by charities.

The annual survey by the WIM Company, the UK's largest investment performance measurement company, of 126 charities with assets worth £3.7bn, showed an average total return (capital and income growth) in 1989 of 30.1 per cent. The average total return from 80 charities over the first nine months of this year was minus 14.4 per cent.

At its face value, such an investment return could imply that charities face financial disaster, or at least may be forced to cut back on their activities. In reality, the situation is nowhere near as serious as the figures suggest.

Dividend payments on company equities are still growing steadily, though more slowly than during the 1980s, despite some well publicised dividend cuts by certain companies. The negative investment return has arisen because capital values have fallen dramatically on the UK stockmarket. But this will only affect charities if they are currently selling equities.

What the market events of this year emphasise is the need for charities to adopt a professional approach to the investment of the assets entrusted to them. The trustees who run charities now generally realise that they must get the maximum return from their assets without taking undue risks.

They have appreciated that leaving their money entirely on deposit does not produce the maximum return, even if it is

unduly high proportion of funds is in equities.

Trustees need to be clear what their objectives are before they set about investing their assets. Most charities require a steady flow of income. So trustees need particularly to assess their cash-flow requirements, not only for the current year but for a few years ahead. Assessment of any exceptional and large cash requirements, such as a new building project, are vital in these considerations.

Trustees, with their advisers, can then set out an investment strategy to meet those objectives. For instance, a high and variable cash-flow requirement will mean that a high proportion of the assets ought to be in cash. A high but steady and predictable cash-flow enables more assets to be held in high-yielding fixed-interest stock. A lower cash-flow requirement enables part of the assets to be held in equities.

Equities can provide the potential for steady income growth, but the immediate income from them is lower than that from fixed-interest stocks.

Charities cannot take undue risks with the assets entrusted to them, so the more hazardous equity opportunities, such as overseas equities, smaller companies and recovery situations, have to be ignored. Equity portfolios held by charities invariably consist of a good spread of UK blue-chip stocks, most of which will be constituents of the FT-SE 100 index.

Surprisingly, there is little evidence that charity portfolios have followed the current fashion of "going green" and investing only in ethical, environmental equity stocks.

Although each trust has its own objectives, one can divide charity portfolios into three categories: those requiring income; those with asset restrictions; and discretionary or unrestricted funds. The first two impose certain investment restrictions, and the effect of these on the underlying investment performance is seen from the WIM survey.

The average annual return over the five years to 1989, on the income and asset-restricted funds, was 16.5 per cent and 16.3 per cent respectively. For discretionary funds, it was 17.5

per cent - a significant increase, reflecting the higher equity content of discretionary portfolios.

However, the defensive nature of income and asset-restricted funds has been brought to the fore this year. In the nine months to the end of September, discretionary funds had a total negative

return of 15.9 per cent, against the average negative return of 14.4 per cent.

Trustees have also tended to delegate the practical aspects of the investment of assets to a sub-committee of those trustees with investment experience, while still retaining overall responsibility for the sub-committee's recommendations.

The operation of the 1986 Financial Services Act has had an impact on the investment activities of charities. Provi-

ously, many charities had received expert advice and management free from fund managers/advisers acting in an individual capacity. Now, such people feel that, since they are not directly authorised, it would be improper to offer advice or to manage funds. Their employer may also severely restrict such freelance activities.

Investment advice from an authorised investment firm costs the charity money, while the financial service regulations have proliferated the paperwork associated with investment. This is particularly burdensome for the small and medium-sized charities.

In order to limit costs and paperwork, the Charities Aid Foundation offer three pooled funds: a cash fund, an income fund and a balanced-growth fund. The last two are managed by Cassinova, one of the leading firms in investment management of charity funds.

The charges made on the income fund and the balanced-growth fund are an initial 1 per cent and an annual management fee of 0.3 per cent. The usual charges for an exempt managed fund, available to pension funds and charities, is an initial 3-to-5 per cent plus an annual 0.5-to-1.0 per cent. Not surprisingly, these funds are very popular with charities.

News for a bargain: a stock exchange trader finds Comic Relief

Tax incentives

Gift Aid proves its value

CHARITIES SCORED a considerable victory this year with the introduction of a scheme that provides tax relief on large donations to charity.

For months, charities had begged the government to provide tax relief, in the hope that it would encourage wealthy individuals to give generously. This spring, the chancellor of the exchequer announced in his budget that single cash donations of between £250 and £500 would be eligible for tax relief.

The new scheme, known as Gift Aid, came into operation on October 1, and already it has achieved considerable success.

According to preliminary figures from the Inland Revenue, charities received over £1.5m in donations via Gift Aid. The total tax repaid by the Revenue on these donations amounted to £470,000, which means that Gift Aid raised nearly £2m for charity in its first month alone.

Two thirds of the donations came from the corporate sector (in fact, from 11 different companies), but the fact that 340 individuals made donations worth £440,000 in total suggests that Gift Aid is indeed appealing to private donors.

Gift Aid works as follows. If somebody gives £750 to any qualifying charity, that is equivalent to £1,000 before basic rate tax of 25 per cent. The charity receives £750 from the donor and £250 in reclaimed tax from the Inland Revenue. If the donor is a higher-rate taxpayer, he can claim higher rate relief too, in this case worth £150.

When the Chancellor announced the introduction of Gift Aid in March, the Charities Aid Foundation (CAF) estimated that the scheme would raise an additional £50m a year

for charities. Helen Donoghue, administrator for the Charities Tax Reform Group, which campaigns on behalf of charities, is optimistic about Gift Aid, although she believes it may take a few months before it becomes possible to judge the success of the scheme.

However, it is worth drawing the comparison with the payroll-giving scheme, which has been in existence since 1987 and which has been rather slow to "catch on". In the 1989-90 tax year, charities received about £7m from payroll-giving schemes, whereby employees donate a fixed portion of their salary (deducted at source) to the charity of their choice.

Like many in the charity sector, Ms Donoghue believes Gift Aid's appeal would increase considerably if the threshold were to be lowered. Obviously, with relief being offered on one-off gifts of up to £500, the scheme was intended to woo the affluent - those who had made money in the City, pop stars, inheritors of large sums, or people who are currently wealthy but cannot commit themselves to making regular donations, for example via a covenant.

Indeed, many charities and campaigners feel that the lower limit of £500 on Gift Aid is too high, and hope that the government will be persuaded to lower it, perhaps to around £250.

"We're very happy with the first results from Gift Aid, but we hope to see the threshold come down to about £250 in order to encourage small one-off gifts as well," says a spokesman for Oxfam.

Although people give to charity because they consider the cause worthwhile, and not sim-

ply because the government has come up with a tax-efficient scheme, charities do stress the importance of tax efficiency nowadays. As Mr Edward Wake-Walker, of the Royal National Lifeboat Institution (RNLI), points out: "Gift Aid is very important, given that the big donors tend to be more tax-conscious."

There are a number of improvements in the scheme, which have the advantage of allowing donors to plan their giving over a period of time. However, there have been pleas for a simplification of payments.

Finally, many charities are concerned about the position on VAT. Some charities are worried that, with the formation of the EC Internal market, they may lose their zero-rating, currently allowed on food, fuel and certain pieces of equipment. While the UK government has shown willingness to support the charities in this respect, the position remains unclear.

At present, many charities have to pay VAT on specific goods and services. It is estimated that they pay about £200m a year, or, in some cases, over 10 per cent of their voluntary income. Ms Donoghue points out that charities have to pay VAT on part of their purchases, and that they cannot recover it in the way that businesses and local authorities can.

The Charities Tax Reform Group has suggested the introduction of VAT relief, which would allow charities to reclaim the tax. "This could be the most significant help the government could give."

The scheme works by deduction of a regular donation from the employee's salary and provision of tax relief. Each year, the upper threshold for payroll giving has increased; for the current year it is £800, equivalent to £500 a month. However, many charities would like to see the upper limit raised and a greater effort placed on promoting payroll-giving schemes.

CAF would like to see a government promotion campaign, on the scale of the anti-smoking or Aids campaigns to galvanise the public into action. The RNLI, for example, is disappointed by the low level of payroll donations. It points out that only a very small proportion of its money comes from payroll donations: in fact, in 1989 the RNLI received £44m in

donations, of which only £81,268 came from the payroll-giving scheme.

However, Mr Peter Cropper, of the Payroll Giving Association, believes the figures are "gradually moving in the right direction", and remains optimistic that, given time, payroll giving "will eventually take off".

The success of Gift Aid is unlikely to put an end to covenants, which have the advantage of allowing donors to plan their giving over a period of time. However, there have been pleas for a simplification of payments.

Finally, many charities are concerned about the position on VAT. Some charities are worried that, with the formation of the EC Internal market, they may lose their zero-rating, currently allowed on food, fuel and certain pieces of equipment. While the UK government has shown willingness to support the charities in this respect, the position remains unclear.

At present, many charities have to pay VAT on specific goods and services. It is estimated that they pay about £200m a year, or, in some cases, over 10 per cent of their voluntary income. Ms Donoghue points out that charities have to pay VAT on part of their purchases, and that they cannot recover it in the way that businesses and local authorities can.

The Charities Tax Reform Group has suggested the introduction of VAT relief, which would allow charities to reclaim the tax. "This could be the most significant help the government could give."

The scheme works by deduction of a regular donation from the employee's salary and provision of tax relief. Each year, the upper threshold for payroll giving has increased; for the current year it is £800, equivalent to £500 a month. However, many charities would like to see the upper limit raised and a greater effort placed on promoting payroll-giving schemes.

Management: charities are at a disadvantage in recruitment

Skills are scarce despite a windfall from the recession

THE RECESSION in the advertising industry is providing some welcome relief for charities that are suffering from a dearth of skilled managers.

In the past few months, some charities have found it easier to fill managerial posts, as casualties of cutbacks in advertising have been prepared to accept lower salaries.

But the situation remains dire for many charitable organisations, as a glance at The Guardian's jobs pages on a Wednesday will indicate. Hundreds of charities are competing for skilled workers, but pay-scales remain well below those in the commercial world.

A chief executive in a medium-sized charity could expect this year, on average, to earn about £30,000 - at least 25 per cent less than his or her counterpart in industry, according to a survey by Charity Recruitment.

The situation is even worse for Britain's smaller charities, where the gap jumps to an average 37 per cent. Eighty per cent of the country's charities have a turnover of less than £1m, and they are finding it increasingly difficult to fill senior posts.

The story from smaller charities trying to find the right manager is similar. They advertise a post, wait for the response, and find applicants unresponsive to their needs. They re-advertise, wait again, and if lucky short-list and interview.

This still may not produce the requisite administrator, director, area executive or volunteer bureau co-ordinator. So they advertise yet again, increasing the advertising bill - and all this time they could be operating without a full managerial team.

The problem is particularly acute now, given the squeeze on spending faced by smaller charities in particular. Local authority cuts and competitive tendering have reduced charities' budgets - and at a time when the demands they face are growing. The fragility of funding - which might be for a specified period only - has reduced job security and consequently put off potential job candidates.

The problem is further compounded by the fact that there are simply fewer younger people in the labour market. Demand is outstripping supply.

The Bristol Council for Voluntary Services is just one of the smaller charities that has been on the look-out for a director, offering up to £17,300 for somebody with practical experience as a manager. Mr Eric Wilson, office manager, points out the dichotomy: the salary is not "wonderful", because of funding pressures, but that funding pressure necessitates more than ever that a highly-qualified person be found.

That, too, is a common theme. Increased demands on charities in today's tight economic environment means an emphasis on efficiency. As well as being "well meaning",

employees need relevant qualifications and experience.

Like fellow volunteer organisations, Greenpeace has been forced to recognise such realities and raise its salaries - although these still remain considerably lower than in industry. The group has, of course, been helped by a growing income as environmental awareness has increased. Not all such organisations have

Charities can still generally rely on the goodwill of people, many of whom are prepared to take a pay-cut because they feel they are doing something worthwhile

been so fortunate.

Peter Melchett, executive director, says Greenpeace's larger size has necessitated an increasingly professional approach: "When Greenpeace was very small, it couldn't afford to pay, and many people worked for nothing, but they worked for comparatively short periods of time and burnt out."

To keep good people, long term, they have had to pay more.

Charities can still generally rely on the goodwill of people, many of whom are prepared to take a pay-cut because they feel they are doing something worthwhile. But are lower salaries a barrier to efficiency?

Olga Johnson, founder of Charity Recruitment, believes this may be so. It may have been sufficient in the past for charities to be managed by retired ex-servicemen, she says, but now the need is for people with experience in administration, fund-raising, finance and marketing.

The larger charities are responding to this by making senior jobs more attractive. Many are introducing career development paths and improved benefits packages, including pensions, health-insurance schemes, and sometimes even cars.

Mention perks to smaller charities, and you are likely to get a sarcastic laugh. Many such organisations are simply struggling from day to day, unable to increase salaries because of local authority grading structures.

It is also debatable whether their inability to pay commercial rates means that they will have to suffer a poorer quality of management. The "charity culture" - where managers are often expected to do their own typing, make the coffee and manage by committee - may not be suited to someone from the corporate world.

As one charity worker says: "There's management and there's management. Some skills you would obviously use in every situation, but others may be entirely inappropriate for a charity. Personal style and presentation may be far more important."

Hilary de Boer

NOR CHARITY HAS ENOUGH CHARITABLE WILLS TO MAKE A DIFFERENCE

The better invested your fund, the more money there is for your cause.

That is why several thousand charities of every size use the investment services provided by Mercury Asset Management.

Mercury is the leading investment management company in the UK, with around £30 billion managed for clients.

We'd like to tell you more. Write to us at the address below. Or call Barry Woolf on 071-280 2800.

CHARIFUND
THE EQUITIES INVESTMENT FUND FOR CHARITIES

Charifund is a wider range investment for registered charities which invests in a broad spread of shares and which can pay out its quarterly dividends without deduction of tax.

Since the fund was formed in 1960 it has grown to over £340 million. An original investment of £1000 would have been worth £9,642 by end of October 1990, and the gross income in the current year would have been £832. Over the preceding five years the value (offer to bid) of units rose by 52.2% and gross income by 91.7%.

Any registered charity may invest, but trustees should be aware that the price of units and the income from them can go down as well as up, and that past performance is no guarantee of the future.

For: The M&G Group, M&G House, Victoria Road, Chelmsford CM1 1FB.
Tel: (0245) 266266. Please send me details of Charifund.

TECHNOLOGY

A dip in the R&D pool

Michael Kenward looks at why Japan's Kobe Steel is setting up in Britain

Sokichi Kametaka wants his company to have a research organisation that works like the world's stock exchanges, around the clock. "R&D is a matter of timing," he says. Kametaka, the president and chief executive officer of Kobe Steel, the Japanese metals and manufacturing company,

Last month Kobe officially opened a new purpose-built laboratory at the Surrey Research Park. "We recruit scientists of the same level and quality in all our laboratories," says Kametaka. "Then, having the same equipment and facilities. Any time of the day, somewhere in the world our research is continuing." In the US, Kobe's researchers work in North Carolina and in the Glaxo Corporation, a company that Kobe took over when it moved into the pharmaceuticals business. The company's global network will concentrate on two areas of R&D: polymers and diamond thin films for use in electronics.

Kobe was led in its plans to set up in Britain by Sir Geoff Allen, a polymer scientist and former chairman of the Science and Engineering Research Council. Allen chaired an advisory panel to help Kobe establish its R&D operation in Britain.

Following the panel's advice, the company sponsored research on polymer science in a number of universities. Some of these projects will continue at the new R&D centre.

Traditionally a steelmaker and machinery manufacturer, Kobe decided four years ago to enter the world of advanced materials. In particular, Kametaka wanted to break into polymers and plastics. At the time the company was not active in polymer technology. It has since embarked on a series of acquisitions, beginning with the Glaxo Corporation in the US.

Kaisaburo Saito, the general manager of the company's new laboratory in Surrey, says that Kobe wanted to

conduct research outside Japan partly because Japanese scientists have a poor record of innovation. "We are expecting original and innovative work here," he said.

"Most polymers were invented in Europe or the US. Unfortunately, Japanese companies have never invented a new polymer," Saito says. "The Japanese improved processes, for example we improved our catalysts, but no new polymers." Saito does not, however, expect Kobe's British research to produce new polymers. "There are more than 50 polymers already, so even if we invented a new one it would be difficult to find a big market."

Saito plans to concentrate on understanding how blends of polymer produce materials with different characteristics. "Many people are trying to make new blends of polymers but have no basic understanding of what happens. We would like to carry out fundamental studies, as well as work on the application of the new blends."

Allen says that the company's research will be directed at producing materials for automobiles and the mass market in general. "What we will try to do is bring aerospace quality into the automobile business." Here the company is putting itself in a position to continue to supply its current markets, even if car makers abandon metals in favour of polymer

composites. Kobe's entry into research in Britain is part of the company's general plan to "globalise" its activities. Setting up an R&D operation is a relatively inexpensive way of putting a toe in the water. Saito says that this year Kobe's budget for the R&D centre is ¥300m.

The move into Britain is also a part of the company's strategy to change direction, and to move away from its dependence on steel and other metals. Saito says the company's R&D strategy is an important part of a broader plan to move into the polymer business. The aim of the research programme is to become familiar with the science of polymers and then apply Kobe's metals processing techniques to the plastics industry.

To provide it with the production facilities for polymers, Kobe plans to acquire plastics companies that could benefit from new polymer technology. Instead of taking over high-tech companies where the risks are high, Saito expects Kobe to acquire relatively small companies.

The target will be "low or mid-tech" companies that are making money, he says, "companies that can afford to expand their current business. They need R&D but they cannot afford it." Kobe's strategy will be to introduce advanced technology into

"WE EAT, SLEEP AND BREATHE POLYMERS HERE."

these 120 companies. It may also set up new companies as joint ventures. Saito says that Kobe was fortunate when it came to recruit researchers to work at its Surrey laboratory. When looking for team leaders to direct the research, he expected to need the services of a headhunter. This turned out not to be necessary because BP and Comtals, among others, were pulling out of some areas of polymer research. This meant that Saito could find the people he needed simply by advertising for staff. He had 280 applicants for four senior jobs.

Saito has already recruited around a dozen scientists to work on polymers. Eventually he hopes to have a team of 50, about the same size as the team now working on polymers in Japan. Kobe is also recruiting scientists to work on diamond thin films. There will be fewer researchers in this area, which is far more speculative. Here Kametaka is looking at least one generation ahead of the existing technology of electronic integrated circuits, which is based on microelectronic chips made on wafers of silicon.

"The silicon wafer will be replaced by gallium arsenide," says Kametaka,

"and then that will be replaced by a new substrate. We are thinking of the diamond thin film as a replacement for that." He believes that even if diamond does not completely oust the competition, it will find special uses with its superior ability to remove heat and to withstand radiation. "We are conducting research all the way from fabrication to the evaluation of thin films," he says.

"The first reason why we like to do R&D in the UK is because we are seeking basic research and creativity. Japanese research is better at improving technology, in applied research and commercialisation."

In Japan, the team matters more than the individual, and younger scientists defer to their elders. This stifles new ideas, which tend to come from young researchers who challenge the conventional wisdom.

Another reason for conducting research in other countries is to bring Japanese scientists into contact with the European way of doing things. Saito hopes that by bringing Japanese researchers to work in Britain, and by sending 180 Britons to Japan, the European style will rub off on Japanese scientists.

Science study in need of a lesson

By Norma Cohen

Traditions die hard in education, as in most sectors. One tradition that will have to be dragged kicking and screaming from the educational scene is the one which forces children to decide their academic preferences at about age 14, when most are still grappling with how to make an appropriate choice of film.

While the advent of the national curriculum has broadened the range of study up to age 16, a curious battle has emerged over science study — an area increasingly neglected by the nation's young people.

The question is whether the time-honoured tradition of studying three separate sciences at ages 14 to 16 should be maintained, or should all children be required to take a "balanced science" course. The latter comprises not only the three pillars of science study — chemistry, biology and physics — but earth science and astronomy as well as several interdisciplinary sciences.

The reality is that the study of three separate sciences takes up about 30 per cent of curriculum time at GCSE level, while the double-award combined science curriculum will take up to 20 per cent of study time. Both are considered to be adequate preparation for a level 3 in any science subject. (Schools also have the option of offering a single award science course, taking up only 12½ per cent of class time, which virtually precludes science study beyond age 16.)

Students who opt for three sciences will find that some subjects, likely to be history, geography, art, music and physical education, have to be curtailed. Without those subjects at GCSE level, a level 3 study is impossible, as is a university course. Thus, at 18, students will be precluded from pursuing a career in certain subjects if they choose the three science route. "If you ask your average 18-year-old whether he wants to study chemistry, his answer depends on whether he's had an inspiring chemistry teacher," says Robert Moore of the Association for Science Education.

Offering students a smorgasbord of science study allows them to see the full range of scientific inquiry, rather than discrete parts of it. Furthermore, key aspects of science do not fit neatly into packages labelled chemistry or physics. Perhaps the most compelling arguments in favour of the smorgasbord approach are contained in a study conducted last year by Brian Woolnough of Oxford University's Department of Educational Studies on the attitudes of sixth-formers towards science. Many perceived science to be a difficult subject which one could tackle only with inherited ability. Material was seen as dull and difficult, requiring passive reception rather than intellectual study and bearing little relation to real-life issues. The latter was particularly true among girls. A balanced science curriculum offers a chance to correct that view.

Despite an overwhelming body of opinion in favour of the double-award approach from organisations such as the Royal Society and the Association for Science Education — both of which are troubled by the decline in the number of home-grown scientists — the government has decided that the teaching of three separate sciences can remain. Schools will have the option of offering combined sciences, three separate sciences or both.

The only organised source of support for this decision came from the nation's independent schools, which cite a desire to challenge the most able students. Also, they note, teachers may prefer to go on teaching their speciality rather than tackle the broad science field. But the existence of a two-tiered system for science study is still likely to lead to a separation of sheep from goats, with combined science perceived as a poor cousin.

TECHNICALLY SPEAKING

Little projects, big ambitions

Japan is famous for conducting research and development in a big way. However, much of Japan's R&D is small in nature. Such projects are supervised by the Science and Technology Agency (STA) and the Ministry of International Trade and Industry (MITI).

The STA is funding small-scale research projects under a scheme called Exploratory Research for Advanced Technology (Erato). Established in 1981, Erato has emerged as a model of small-scale basic research. For Japan, which has only a few Nobel prizes in the sciences, basic research is a means to gain new building blocks for the development of R&D.

Projects funded by Erato last about five years and focus on scientific topics such as

molecular architecture, which are largely unexplored. The projects are staffed by relatively young researchers from Japanese universities and companies, but foreign researchers participate as well.

New Erato projects address such topics as interaction between electrons and electromagnetic fields under the title of "phase information", and methods of depositing atomic-level materials on fine surfaces and the means to study these materials.

The phase information project is led by Akira Tsumura, director of the Erato's advanced research laboratory, while the so-called "atomcraft"

project is supervised by Masakazu Aono, a chief scientist at the Institute of Physical and Chemical Research. Transfer of information within organic substances is being studied under the biomimetic transfer project.

Erato projects are conducted at existing corporate or government research facilities, and three or four core companies participate in each scheme. Project leaders often buy or make new equipment, but they do not have to spend money on new buildings. The emphasis is on creativity and innovation, which is a refreshing change of pace in Japan's laboratories.

While the Erato scheme typically funds about one dozen projects, scores of other small-scale research projects are sponsored by the government's Japan Key Technology Centre. These are usually collaborative projects which concentrate on areas such as synchrotron-radiation facilities for tomorrow's semiconductor production methods or processing of materials in microgravity conditions.

Other research is taking place in areas such as optoelectronics, aircraft-related technology, communications know-how, microelectronics and biotechnology. The stated aim of these projects is to focus on basic research. In reality they typically steer towards medium-term development-side objectives. For example, Tokyo-based Space Communications Research, a consortium for satellite R&D, is developing know-how for large satellite antennas, high-powered transponders, and high-frequency signal relay capabilities. It disseminates information to participating companies, including many of the large electronics producers. The consortia obtain only partial funding from the centre. Most of the research budgets come from corporate members of the consortia.

Research topics are often considered too far beyond the technical horizon for companies to handle alone. Hence, they band together under the umbrella of the centre.

Product development tends to be the ultimate focus of Japanese research, and the Erato and Japan Key Technology Centre schemes are no exceptions.

Recent figures from the US National Science Foundation show that the US channels only 1.8 per cent of its GNP into non-defence R&D while Japan devotes 3.8 per cent to the same category. Moreover, data from the Organisation for Economic Co-operation and Development indicates that Japan's R&D spending is expanding three times faster than that of the US.

FT LAW REPORTS

Bank cannot sue in the UK

ROYAL BANK OF SCOTLAND PLC v. CAJSA DI RISPARMIO DELLA PROVINCIA LOMBARDA AND OTHERS
ROYAL BANK OF SCOTLAND PLC v. ISTITUTO BANCARIO SAN PAOLO DI TORINO
Queen's Bench Division
Mr Justice Phillips
December 8 1990

PLACE of performance of a bank's obligations in international credit transactions is not identified by application of any general rule, but depends on the nature of the particular transaction and where parties to a letter of credit agree that the issuing bank, which is not domiciled in the UK, will reimburse the confirming bank through a specified bank in the US, place of performance of the reimbursement obligation is the US, and the English court has no jurisdiction to hear a claim for breach.

Mr Justice Phillips so held when striking out two actions by the Royal Bank of Scotland plc (RBS) against Cassa di Risparmio della Provincia Lombarda and four other Italian banks, and Istituto Bancario San Paolo di Torino, for lack of jurisdiction.

Article 2 of the Convention on Jurisdiction and Enforcement of Judgments in Civil and Commercial Matters 1968 provides: "Subject to the provisions of this Convention, persons domiciled in a contracting state shall... be sued in the courts of that state."

Article 6 "A person domiciled in a contracting state may, in another contracting state, be sued: (1) in matters relating to contract, in the courts of the place of performance of the obligation in question."

HIS LORDSHIP said that Italian importers purchased consignments of Argentinian wheat to be shipped from the Argentine to Genoa and Savona.

Payment was to be in US dollars under irrevocable letters of credit to CIR Ltd in London.

On instructions from the importers six Italian banks requested the Tottenham Court Road branch of RBS to confirm the letters of credit. Each Italian bank stated that claims for reimbursement for RBS should be made to specified banks in New York or Philadelphia.

RBS confirmed the letters of credit. Documents were presented under those letters. RBS took up the documents and

paid CIR. The importers then received information that led them to suspect they were the intended victims of a fraud, and that neither the wheat nor the ship existed. They instructed the Italian banks to freeze the credits.

The Italian banks revoked the authorisation to the American banks to reimburse RBS, and informed RBS that it would not receive reimbursement. RBS called on the American banks to reimburse them. When they declined to do so, RBS commenced the present actions.

The Civil Jurisdiction and Judgments Act 1982 gave the 1968 Convention on Jurisdiction in Civil and Commercial matters the force of law in the UK.

RBS contended that its claim was founded on a right to reimbursement in London, and that accordingly the English court had jurisdiction under article 6(1) of the 1968 Convention.

The Italian banks contended that the claim was founded on a right to be reimbursed in America, so that the English court had no jurisdiction.

The "obligation in question" within article 6(1) was the obligation owed by each of the Italian banks to reimburse RBS. Identification of "place of performance" was complicated by the fact that it was possible for one bank to reimburse another by using one of a number of different methods of payment, some of which involved the intervention of one or more correspondent banks.

The RBS contended that in the absence of express or implied agreement to the contrary the general rule of English law required the debtor to seek out the creditor at his place of business and pay him there (see *Chitty on Contracts* 6th ed para 1530). Thus, it was argued, under that general rule the Italian banks were obliged to seek out RBS and reimburse it in London.

Where the rule had not accorded with the practical demands of a particular type of contract the courts applied a more efficacious alternative. In particular the rule did not apply to the relationship between banker and customer — a customer was obliged to demand payment at the branch where the account was kept.

It did not follow from that special rule that the general rule had no application to inter-bank transactions. It was necessary to look at the nature of the particular transaction in

order to decide whether it was appropriate to apply the rule. The parties adduced expert evidence as to banking practice. Nothing in the evidence led to the conclusion that in the absence of agreement business efficacy called for reversal of the general rule of English law so that reimbursement had to be made at the issuing bank's place of business.

Mr Scott for RBS contended that whatever practice might be adopted as a matter of usage, in the absence of agreement the only right that a confirming bank had was to be paid money or money's worth at its place of business.

That was so, so it was not realistic to attempt to identify place of performance of the reimbursement obligation in international credit transactions by the application of any general rule.

Insofar as credits could be freely transferred between countries, the manner and place of reimbursement were likely to be readily agreed between confirming banks and issuing banks, and no difficulty would arise in practice in determining where performance was to take place.

In the present case there was no reason to think that the place of performance was of particular significance to any of those involved so long as the Italian banks were bent on performance. It was assumed prominence only because of its impact on jurisdiction. In such circumstances to determine the place of performance by application of a rule that was at odds with the usual practice would be very much a last resort.

The court was not driven to that expedient. Each request to RBS to confirm the credit stipulated in effect that reimbursement should be claimed from a bank in America. After confirming each credit RBS confirmed it would claim on the American bank. RBS contended that those communications did not amount to contractual agreements but simply provisional arrangements as to a proposed method of reimbursement which the issuing bank was free to alter without breach of contract. The Italian banks contended there was binding contractual agreement that reimbursement would be effected through the specified American banks.

There was no doubt that the specification of the reimbursing banks was of contractual effect. Article 21 of the UCP made express provision for

payment through a reimbursing bank. The Italian banks requested RBS to confirm the credits on the basis that the specified American banks would be the reimbursing banks. RBS implicitly accepted those offers by confirming the credits, and subsequently stated expressly that they would claim on the reimbursing banks.

That constituted express agreement between the parties as to the manner in which reimbursement would be effected.

The agreement between RBS and the Italian banks was that RBS should claim on the American reimbursing banks. Wherever the reimbursed RBS account might be, the stipulation for use of an American reimbursing bank made America the place of performance of the reimbursement obligation for the purposes of article 6(1).

Place of performance was America where the issuing bank had to procure the credit or facility with the reimbursing bank, not the place where RBS would ultimately be credited as a result of drawing on the reimbursing bank.

The reason for the reimbursing bank's failure to pay was that the Italian bank had renounced its obligation to pay, whether through the reimbursing bank or at all, and withdrawn instructions from the reimbursing bank. That contract, if without legal justification, was repudiatory. RBS did not accept the repudiation.

The agreed mode of performance was through banks in New York or Philadelphia. The agreed place of performance was New York or Philadelphia. Nothing occurred to alter the agreed mode and place of performance.

The Italian banks failed to effect performance by that mode and in that place. The substantive issue in each action was whether they could justify that failure. That was not an issue which could be resolved in the English court, because England was not the place of performance of the obligation in question.

For Cassa di Risparmio and four other Italian banks: Simon Tuckey QC and Jeremy Strong (Mackenzie Mills). For Istituto Bancario San Paolo di Torino: Richard Atkins QC and Peregrine Simon (Norton Rose).

Guide to pricing of Authorised Unit Trusts

Compiled with the assistance of Leutro SS

INITIAL CHARGE: Charge made on sale of units, used to defray marketing and administration costs. This charge is included in the price of units.

OFFER PRICE: Price offered to investors. The price at which units are bought by investors.

NET PRICE: Price offered to investors. The price at which units are bought by investors.

CANCELLATION PRICE: The price at which units are sold back to the fund manager. This price is usually lower than the net price.

TIME: The time taken for units to be sold back to the fund manager. This time is usually shorter than the time taken for units to be sold to investors.

SCHEME PARTICULARS AND REPORTS: The most recent report and scheme particulars can be obtained from the fund manager.

FOREIGN EXCHANGES

D-Mark continues to advance

INTERVENTION by some European central banks failed to keep the strong D-Mark in check yesterday. Demand for the German currency was encouraged by news that the Bundesbank is to hold a new conference today. This is sometimes a sign of interest rate moves, but analysts generally believe the central bank will set its money supply target for next year today and leave any tightening of monetary policy until the new year.

An unchanged M3 money supply growth target of 4 to 6 per cent is expected, possibly accompanied by warnings to the Bonn government about excessive borrowing to finance German unity and to industry about the inflationary consequences of high wage settlements.

The Bank of Italy sold DM100m, \$90m and Ecus90m when the D-Mark rose to a record high of 1.755.00 from 1.753.00 at the Milan fixing. Short-term Eurodollar interest rates also had a firmer tone, as did the Belgian franc rate, as the Belgian National Bank increased its key three-month Treasury bill rate. This was the fifth rise in the rate since German interest rates started to move up in early November, and reflects Belgian policy of tying the franc to the D-Mark.

Market sources suggested that the Belgian central bank may have sold a moderate amount of dollars to support its currency and may have also sold D-Marks.

The D-Mark continued its rise towards the Spanish peseta at the top of the European Monetary System. This put increasing pressure on the weaker members of the EMS exchange rate mechanism, including the French franc. At the Paris fixing the D-Mark rose to FF8.3980 from FF8.3920, but dealers saw no sign of intervention by the Bank of France at the fixing or on the open market.

Sterling looked increasingly vulnerable at the bottom of the ERM. At the London close the pound had fallen to DM2.8625 from DM2.8875, taking it nearer to its floor against the D-Mark of about DM2.8250. Sterling declined to FF8.7935 from

FF8.1975 and to SF1.4350 from SF1.4625, while losing 70 points to \$1.9445, but rose to Y256.50 from Y255.75. Its exchange rate index shed 0.2 to 93.3. In New York the pound ended a shade lower at \$1.9442.

The pound's position was helped by figures on November UK retail sales. These fell 0.5 per cent, after declining 1.1 per cent in October, encouraging speculation about a cut in British interest rates at a time when many European rates are moving higher.

The dollar was generally weak after Friday's easing of the Federal Reserve's monetary stance, but traded quietly. It touched a record low of DM1.4625 and closed in London at DM1.4725, against DM1.4795 previously. The dollar fell to FF5.0050 from FF5.0200, but held at SF1.2625 and rose to Y135.50 from Y131.10. Its index lost 0.2 to 90.3.

these figures are unrealistic. Very high and low values reflect the previous 12 weeks plus the current week, but not the last 52 weeks. The 52-week figures are more realistic. The 52-week figures for the 1990-91 period or more have been paid, but the year's high-only ranges are not. The 52-week figures for the 1990-91 period are shown for the same reason only. The 52-week figures are based on the 52-week figures for the 1990-91 period.

Bargain hunting reverses early Dow retreat

Wall Street

SELECTIVE bargain buying helped the market to pick up yesterday after Gulf and economic worries had depressed sentiment earlier in the day, writes Patrick Harrison in New York.

At the close the Dow Jones Industrial Average blue chip indicator was up a net 6.88 at 2,556.78. The Standard & Poor's 500 was 1.15 higher on balance at 338.90, while the over-the-counter index, the Nasdaq composite, was virtually unchanged at 371.47. Turnover on the big board came to 138.6m shares, well below the volume of business seen last week, while rising issues narrowly outpaced declines at the finish by 780 to 771.

The initial market retreat was a direct result of a statement from the Iraqi information minister that Iraq would not withdraw from Kuwait under any circumstances. The statement also had an effect on oil prices; in late New York trading the price of a barrel of January crude was up 32 cents at \$26.90.

Sentiment was also undermined by fresh consideration of the much larger than expected rise in November unemployment announced on Friday. Although the Federal Reserve moved quickly to bring down short-term interest rates, concern over the severity of the economic downturn and its effect on corporate profits is deepening.

Banks were in the limelight throughout the morning, led by Security Pacific, the fourth largest US commercial banking group, which announced a special \$600m fourth quarter debt provision, the withdrawal of many of its European and Australian activities and the disbanding of its merchant banking subsidiary.

The drastic financial surgery at the group is intended to tackle real estate problems, build loan loss reserves and strengthen the capital base. SecPac improved 8 1/4 to 33 1/2 on turnover of 1m shares.

Elsewhere in the sector per-

formances were mixed in strong trading, a reflection of the uncertainty in the market about the immediate outlook for bank earnings.

Aviation shares weakened. Boeing lost 5 1/4 to \$44 1/4 on turnover of 1m shares, McDonnell Douglas 5 1/4 to \$43 1/4 and United Technologies 5 1/4 to \$47 1/4 on worries about future demand for commercial aircraft from an international airline industry suffering from a sharp drop in business.

HAL, the parent of Hawaiian Airlines, was a bright exception, advancing 8 1/4 to \$10 1/4 after Northwest, the private airline, agreed to pay HAL \$20m for a 25 per cent stake in its subsidiary.

Edison Brothers, the women's shoe store chain, receded 5 1/4 to \$22 1/4 on a third quarter profit to 52 cents a share from the corresponding period's 76 cents.

Toys 'R' Us, the leading toy retailer, were well bought, the shares climbing 4 1/4 to \$33 1/4 on turnover of almost 2m. Last week Toys 'R' Us stock was depressed by expectations of poor Christmas sales, but later buoyed by news of the financial troubles at ChildWorld, its major competitor. Yesterday, ChildWorld shares were down 3 1/4 to \$23 1/4.

Lone Star Industries, the cement producer, slumped 3 1/4 to \$2 1/4 as more than 1m shares changed hands after announcing that the company and its subsidiaries will seek Chapter 11 protection under the bankruptcy code.

Canada

TORONTO closed on a mixed note, having recovered from an initial decline, with investors torn between fears of a US recession and hopes that the US Federal Reserve would reduce interest rates.

The composite index finished 3.3 firmer on the day at 3,264.8, although declines edged out rises by 285 to 282. Volume was a low 15.8m shares, down from Friday's 20.8m. Eight of the 14 sub-groups posted gains, but only gold, with a 1.21 per cent rise, was up significantly.

EUROPE

Bourses subside as institutions stage year-end retreat

VOLUME slipped on many bourses yesterday, institutions retreating as the close of the year approached, writes Our Markets Staff.

FRANKFURT ended lower in thin trading as an early attempt to extend last week's gains failed. Dealers talked of a lack of follow-on orders at higher price levels. After a 1.35 rise to 650.82 in the FAZ index at mid-session, the DAX closed 8.04 lower at 1,504.80, against a high of 1,521.09 early in the session. Volume fell from DM6.6m to DM4.5m.

Merck Finck in Düsseldorf noted a degree of strength in banks, where Dresdner ended DM4.50 better at DM383.50, apparently on hopes that German interest rates will follow their US counterparts down. The bank itself has reservations about interest rate prospects in an economy which will have to fund the rebuilding costs of East Germany.

The improvement in sentiment about German banking

profits, however, was reflected in Bayernhypo, 50 pf better after reporting a 2.8 per cent decline in group ten-month operating profits, largely as a result of continuing start-up costs at new subsidiaries in the UK and Germany. The bank said later that steady 1990 profits would allow it to pay an unchanged DM15 dividend.

PARIS stayed steady for most of the day but lost ground in the afternoon as the French franc weakened and Wall Street opened lower. The CAC 40 index lost 15.70 to 1,653.01 in volume estimated at around FF1.7m.

Trading concentrated on BSN and LVMH following news on Friday that BSN was selling its champagne business to LVMH. BSN fell FF13 to FF778 with 142,790 shares dealt, as investors took profits after Friday's 4.3 per cent gain. Analysts said that the market regarded the deal as favouring BSN in the short-term. On the other hand, LVMH fell FF157

to FF3,692 on volume of 21,370 shares as the market took the view that the company had paid over the odds for BSN's champagne brands and that its debt burden had increased as a result of the acquisition.

MILAN did a quite a good job of absorbing the selling pressure stemming from options-related activity. Traders estimated that more than 70 per cent of call options were taken up yesterday when they expired and the underlying shares were sold to make an immediate gain. Trading was expected to remain technical before Wednesday when the December account closed. The Comit index fell 3.54 to 541.49 in volume estimated below Friday's 1.195m.

Blue-chip stocks were largely ignored, with Fiat falling Lst 1 to L15,400. Generali losing L210 to L30,700. Smaller stocks were favoured, with La Biennale adding L50 to L5,540. News that Italy's three largest unions called for a strike

on December 30 in support of the engineering union came after the engineering union closed. Talks between the engineering union and the employers association Confindustria over a shorter working week broke down over the weekend.

AMSTERDAM closed lower in quiet trading as the weaker dollar sparked a decline in blue chip stocks. The CBS Tendency index fell 0.5 to 97.4.

Philips ended 50 cents lower at F120.90 after a report in a Dutch newspaper that the company's core lighting business would only break even during the fourth quarter of this year, and that earnings would not recover until 1992. There was also a report that KLM had cancelled an order it had awarded to Philips for mini television screens for use on long-haul flights.

ZURICH fell as nervous foreign investors pulled back from the Swiss market, leaving overall volume at a very low level. The Credit Suisse index

slipped 2.6 to 482.4.

CS Holding fell SF40 to SF1,680. The company, parent of Credit Suisse, forecast lower group profits for the current year. Among other blue chips, Brown Boveri in engineering lost SF120 francs to SF4,170 and Ciba-Geigy in chemicals dropped SF50 to SF2,490.

Sanofi, however, built on Friday's gain, adding SF20 to SF19,250, as the market reacted positively to news that it aimed to increase accessibility to its schizophrenia drug Clozapine in the US by significantly reducing the price.

STOCKHOLM closed mixed as profit-taking after last week's gains combined with general buying interest from institutions. The Aftersvindex general index rose 2.0 to 912.7 in turnover of SK200m, down from SK185m on Friday.

The forestry index continued to outperform the general rose, gaining 2 per cent. MoDo saw its restricted C shares rise SK18 to SK158

after its chairman said that he had received a bid for his stake of around 15.7 per cent of votes in the company. The free B shares added SK10 to SK210.

OSLO eased in quiet trading. The all-share index fell 3.49 to 470.03 in trading worth NK136m. After the market closed, Norway's main union federation demanded new pay talks: November inflation showed an annual rate of 4.5 per cent, above the agreed four per cent pay increase for 1990.

MADRID opened an hour and a half late because of technical problems. Later, prices rose on year-end institutional activity. The general index rose 1.75 to 941.20.

BRUSSELS saw shares in Accor Union Minière rise BF350 to BF355.70 on speculation that the holding company Société Générale would reduce its stake in the company. The cash market index rose 84.37 to 5,185.70 at the start of the first trading account for 1991.

ASIA PACIFIC

Nikkei advances for fourth day though turnover falls

Tokyo

IN SPITE of profit-taking, the Nikkei average rose for the fourth consecutive session yesterday. Trading was led by dealers as institutional investors were still wary, writes Shiro Tanaka in Tokyo.

Up 889.29 last Friday, the index put on a further 262.18 to 23,784.57, against a day's high of 23,862.41 and low of 23,560.57. Volume fell from 570m shares to 400m. Advances led declines by 755 to 203, with 117 issues unchanged. The Toxix index of all first section stocks rose 16.80 to 1,977.02, but in London the ISE/Nikkei 50 index slipped 2.85 to 1,941.03.

Equities were helped by lower oil prices and a large injection of funds into the money market, which raised hopes of reduced interest rates. Prices also revived after arbitrage-related selling dried up.

Mr Charles Lambert at Jardine Fleming Securities said many investors were expecting a higher turnover. "We had expected the sentiment from last Friday to carry on through this week," he added.

Large-capital issues were generally strong, but some lost ground on profit-taking. Sumitomo Metal Mining shed Y10 to Y1,070.

Non-life insurance companies, strong recently on foreign buying, also succumbed to profit-taking. Tokio Marine & Fire fell Y40 to Y1,280 and Taisho Marine & Fire declined Y10 to Y1,040.

Matsubata Communication Industries was down Y60 to Y3,260, declining for the first time in five consecutive trading days. Other telecom issues which had attracted investors on the liberalisation of car and mobile phones in 1994, also fell. Japan Radio lost Y40 to Y2,290.

Fujikura, a leading electric cables maker, gained ground for the fourth trading day in a row, adding Y45 to Y240. The firm's steady sales of optical fibres for communications to Nippon Telegraph and Telephone (NTT) attracted buy orders.

International electricals and other export-oriented issues were soft on concern over the weakening US economy. Fujitsu shedding Y10 to Y1,000. Automobiles also declined,

with Nissan Y17 lower at Y715 and Toyota Y40 off at Y1,780.

Chiyoda, a leading plant engineering company with petrochemical plant projects in the Middle East, gained Y140 to Y1,780. The issue had faced heavy selling since the break-out of the Gulf crisis, but investors gained confidence in the stock on the release of the hostages and hopes of a peaceful resolution.

Daiel, the leading supermarket chain, gained in the morning but lost steam, closing unchanged at Y1,490. Last week the company pledged to aid Shuwa, a property and stock investment company stricken by high interest rates.

In Osaka, chemical and machinery stocks advanced while oil and construction issues lost ground. The OSE average climbed 567.35 to 26,154.90 on volume of 32.5m shares. Ono Pharmaceutical added Y10 to Y4,630 and Nintendo Y100 to Y21,500.

Roundup

MOST Pacific Basin markets were unwilling to take Friday's gains much further, but there

were pockets of light in the gloom. Bangkok was closed for the Constitution Day holiday.

MANILA gave the best performance of the day, the composite index rising 21.16, or 3.4 per cent, to 643.15 as news of a positive oil find in the southern Philippines buoyed share prices in active trading.

Selected oil shares belonging to the West Lianapan drilling consortium generated much of the session's volume, which more than doubled from 95m to 206.6m pesos.

The local Securities and Exchange Commission lifted the daily price ceiling after the opening trades. The oil index slipped 1.967 to 8,862. Oriental Petroleum & Minerals, holders of a 36.6 per cent stake in West Lianapan, advanced 0.015 peso a share, or 48.5 per cent, to close at 0.055 peso.

TAIWAN fell again. After a recovery of 13 per cent in the week to last Friday, Saturday saw a drop of 30.45 in the weighted index and yesterday a further decline of 123.15, making a two-day plunge of 8.4 per cent to 4,523.31.

Volume decreased from T\$61.8m to T\$56.6m with prof-

it-taking concentrated on banking. The market is still 77 per cent up from its 1980 low of 2,590.47.

AUSTRALIA heard rumours, confirmed towards the close, that the John Fairfax newspaper publishing group was about to be placed in receiver ship, and the All Ordinaries index dipped 6.0 to 1,329.6.

ANZ, part of a group of banks owed A\$1.2m by Fairfax, receded 16 cents to A\$3.46 in turnover of 2.4m shares. Overall turnover value fell from A\$25m to A\$13m.

HONG KONG broke a five-session winning streak of profit-taking brought the Hang Seng index back 14.56 to 3,149.13 in turnover down from HK\$1.6m to HK\$961m.

Hong Kong Land topped the actives list and gave up 25 cents to HK\$7.50 on talk of a cut in rental rates. Dealers said much of the profit thus taken went into Wharf Holdings, another major investment property group, following Friday's better than expected 19 per cent rise in interim profits to HK\$691m. Wharf, up 15 cents at HK\$8.25, was the second most heavily traded stock.

SINGAPORE's Straits Times Industrial index ended 17.98, or 1.5 per cent, lower at 1,179.87. KUALA LUMPUR seemed more resilient, rising 13.68 to 504.35, but the market had missed Friday's gains when it closed for the day as a mark of respect to Mr Tunku Abdul Rahman, the former prime minister.

NEW ZEALAND firmed on volume described as unusually active for the start of the week. The Barclays index improved 11.37 to 1,264.10 as turnover, with off-market transactions boosting the on-market trading edged up from NZ\$6.5m to NZ\$9.5m.

BOMBAY, closed last Friday to allow brokers to catch up with settlement work, saw the BSE rise 35.04, or 3 per cent, to 1,214.45.

SOUTH AFRICA

TRADING was dull in the absence of fresh factors, but interest in quality issues persisted. The JSE all-gold index closed unchanged at 1,197 while the industrial index added 30 to 2,986. The all-share index rose 14 to 2,708.

Markets rise on prospect of peace
